CODE	COURSE NAME	CATEGORY	L	T	P	CREDIT
MET402	MECHATRONICS	PCC	2	1	0	3

Preamble: This course provides the mechanical systems used in Mechatronics and the Integration of mechanical, electronics, control and computer engineering in the design of mechatronics systems.

Prerequisite: NIL

Course Outcomes: After the completion of the course the student will be able to

CO Nos	Course Outcomes	Level of learning domain
CO 1	Explain the sensors and actuators used in mechatronics	2
CO 2	Design hydraulic and pneumatic circuits for automation.	6
CO 3	Explain the manufacturing processes used in MEMS	2
CO 4	Demonstrate the various components of a CNC machine	2
CO 5	Create a PLC program	6
CO 6	Explain the robotic sensors and vision system	2

Mapping of course outcomes with program outcomes

Continuous Internal Evaluation Pattern:

Attendance : 10 marks
Continuous Assessment Test (2 numbers) : 25 marks
Assignment/Quiz/Course project : 15 marks

End Semester Examination Pattern: There will be two parts; Part A and Part B. Part A contain 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 questions from each module of which student should answer any one. Each question can have maximum 2 sub-divisions and carry 14 marks.

Course Level Assessment Questions

Course Outcome 1 (CO1):

1. Which type of sensor can be used for determining angular movement of a shaft?
2. What is the significance of grey scale in absolute encoders?
3. Which type of actuator can be used for a mechanical system?

Course Outcome 2 (CO2)

1. Explain the basic structure of a simple hydraulic circuit?
2. Explain the basic structure of a simple pneumatic circuit?
3. Design a hydraulic circuit for two hand operation of a hydraulic press?
4. Design a pneumatic circuit for the sequencing operation A+B+A-B-.

Course Outcome 3(CO3):

1. Explain the LIGA process.
2. Explain the MEMS based gyroscope?
3. Explain the deposition-based MEMS manufacturing technique?

Course Outcome 4 (CO4):

1. Explain the working of ant frictional guideways?
2. Demonstrate suitable methods to achieve antifriction feed drive system?
3. Demonstrate suitable non-contact type measuring system that can be used in CNC?

Course Outcome 5 (CO5):

1. Discuss About various type of range finders used in robotics?
2. Discuss about various image accusation techniques used in robotics?
3. Discuss various image processing techniques used in robotics?

Model Question Paper

MECHATRONICS - MET402

Max. Marks : 100 **Duration : 3 Hours**

PART – A

Answer all questions, each question carries 3 marks

1. Explain the significance of grey codes in an absolute optical encoder?
2. Explain cushioning in pneumatic actuator?
3.Explain with a neat sketch working of a poppet valve.
4. What is meant by high aspect ratio machining? List any 2 methods of manufacturing used in it.
5. Differentiate between hydrostatic and hydro dynamic bearing used in CNC machines.
6. What is meant by stick slip phenomena in a frictional guideway?
7. Explain the XOR logic using suitable ladder diagram and truth table?
8. Explain the ladder diagram for a delay on timer circuit?
9. Differentiate between CCD and CID camera used in robots?
10. Discuss the functioning of a tactile sensors?

PART -B

Answer one full question from each module.

MODULE – 1

11. List and explain in detail the static and dynamic characteristics of a sensor (10 marks)

OR

12. a) Write a note on rotary actuators. (3 marks)
    b) Explain with a suitable diagram various component of a pneumatic system. (7 marks)

MODULE – 2

13. Develop a hydraulic circuit for the sequencing operation A+B+A-B-? (10 marks)

OR

14. Explain the working of MMS based accelerometer with a neat sketch? (8 marks)

MODULE – 3

15. a) What is meant by preloading? Explain in detail about preloading methods used in a recirculating ball screw (6 marks)
    b) Explain various load acting on a CNC machine structure (4 marks)

OR

16. Develop a mathematical model for a general fluid system (10 marks)

MODULE – 4

17.Two motors are to be controlled in a sequence. The second motor starts 30 seconds after the starting of first motor by a push switch. Develop a PLC ladder diagram for the following cases and describe the circuit.
Case (A): Only one motor operates at a time.
Case (B): Both the motor gets off together after 50 seconds.3DP (10 marks)

OR

18 Explain the working of an automobile engine management system using suitable diagrams. Also explain its advantages over conventional automobile system (10 marks)

MODULE – 5

19 a) what is meant by image accusation? Illustrate the working of Charge Coupled Device for machine vision applications. (10 marks)

OR

20 a) Explain the histogram processing technique in image processing. (6 marks)
b) What is meant by thresholding in image processing? (4 marks)

SYLLABUS

Module 1

Introduction to Mechatronics: Structure of Mechatronics system. Sensors - Characteristics - Temperature, flow, pressure sensors. Displacement, position and proximity sensing by magnetic, optical, ultrasonic, inductive, capacitive and eddy current methods. Encoders: incremental and absolute, gray coded encoder. Resolvers and synchros. Piezoelectric sensors. Acoustic Emission sensors. Principle and types of vibration sensors.
Actuators: Mechanical actuators, Electrical actuators, Hydraulic and Pneumatic actuators

Module 2

Directional control valves, pressure control valves, process control valves. Rotary actuators. Development of simple hydraulic and pneumatic circuits using standard Symbols.
Micro Electro Mechanical Systems (MEMS): Fabrication: Deposition, Lithography, Micromachining methods for MEMS, Deep Reactive Ion Etching (DRIE) and LIGA processes. Principle, fabrication and working of MEMS based pressure sensor, accelerometer and gyroscope.

Module 3

Mechatronics in Computer Numerical Control (CNC) machines: Design of modern CNC machines - Mechatronics elements - Machine structure: guide ways, drives. Bearings: anti-friction bearings, hydrostatic bearing and hydrodynamic bearing. Re-circulating ball screws, pre-loading methods. Re-circulating roller screws. Measuring system for NC machines - direct and indirect measuring system.
System modeling - Mathematical models and basic building blocks of general mechanical, electrical, fluid and thermal systems.

Module 4

Typical elements of open and closed loop control systems. Adaptive controllers for machine tools. Programmable Logic Controllers (PLC) –Basic structure, input/ output processing. Programming: Timers, Internal Relays, Counters and Shift registers. Development of simple ladder programs for specific purposes.
Case studies of Mechatronics systems: Automatic camera, bar code reader, pick and place robot, automatic car park barrier system, automobile engine management system.

Module 5

Mechatronics in Robotics-Electrical drives: DC, AC, brushless, servo and stepper motors. Harmonic drive. Force and tactile sensors. Range finders: ultrasonic and light-based range finders
Robotic vision system - Image acquisition: Vidicon, charge coupled device (CCD) and charge injection device (CID) cameras. Image processing techniques: histogram processing: sliding, stretching, equalization and thresholding.

Course Contents and Lecture Schedule

No	Topic	No. of Lectures
	MODULE 1	
1.1	Introduction to Mechatronics: Structure of Mechatronics system. Sensors - Characteristics	1
1.2	Temperature, flow, pressure sensors. Displacement, position and proximity sensing by magnetic, optical, ultrasonic, inductive, capacitive and eddy current methods.	2
1.3	Encoders: incremental and absolute, gray coded encoder.	1
1.4	. Resolvers and synchros. Piezoelectric sensors. Acoustic Emission sensors. Principle and types of vibration sensors.	1
1.5	Actuators: Mechanical actuators, Electrical actuators, Hydraulic and Pneumatic actuators	2
	MODULE 2	
2.1	Directional control valves, pressure control valves, process control valves. Rotary actuators.	2
2.2	Development of simple hydraulic and pneumatic circuits using standard Symbols.	2
2.3	Micro Electro Mechanical Systems (MEMS): Fabrication: Deposition, Lithography, Micromachining methods for MEMS,	2
2.4	Deep Reactive Ion Etching (DRIE) and LIGA processes.	1
2.5	Principle, fabrication and working of MEMS based pressure sensor, accelerometer and gyroscope.	2
	MODULE 3	
3.1	Mechatronics in Computer Numerical Control (CNC) machines: Design of modern CNC machines - Mechatronics elements - Machine structure: guide ways, drives. Bearings: anti-friction bearings, hydrostatic bearing and hydrodynamic bearing.	2
3.2	Re-circulating ball screws, pre-loading methods. Re-circulating roller screws. Measuring system for NC machines - direct and indirect measuring system.	2
3.3	System modeling - Mathematical models and basic building blocks of general mechanical & electrical system	1
3.4	Mathematical models and basic building blocks of general fluid and thermal systems	1

	MODULE 4	
4.1	Typical elements of open and closed loop control systems. Adaptive controllers for machine tools. Programmable Logic Controllers (PLC) – Basic structure, input/ output processing.	**2**
4.2	Programming: Timers, Internal Relays, Counters and Shift registers. Development of simple ladder programs for specific purposes	**2**
4.3	Case studies of Mechatronics systems: Automatic camera, bar code reader, pick and place robot, automatic car park barrier system, automobile engine management system.	**2**
	MODULE 5	
5.1	Mechatronics in Robotics-Electrical drives: DC, AC, brushless, servo and stepper motors. Harmonic drive.	**2**
5.2	Force and tactile sensors. Range finders: ultrasonic and light-based range finders	**2**
5.3	Robotic vision system - Image acquisition: Vidicon, charge coupled device (CCD) and charge injection device (CID) cameras.	**2**
5.4	Image processing techniques: histogram processing: sliding, stretching, equalization and thresholding.	**2**

CODE	COURSE NAME	CATEGORY	L	T	P	CREDIT
MET414	QUALITY MANAGEMENT	PEC	2	1	0	3

Preamble: This course is designed to facilitate the students to understand the concept and culture of total quality management. It empowers the students by inculcating the skills to use quality control techniques and other quality tools in solving quality-related problems and apply these principles in an industry. This course will also amalgamate their knowledge about the importance of customer satisfaction through desired quality at a competitive price.

Prerequisite: NIL

Course Outcomes: After the completion of the course the student will be able to

CO 1	To be conversant with important terms for quality management in organisations
CO 2	Have a complete theoretical and practical understanding of the contributions of Quality Gurus
CO 3	Demonstrate knowledge of the underlying principles of strategic quality management
CO 4	Identify various human dimensions of TQM
CO 5	Implement different tools and techniques in TQM
CO 6	Identify core and extended modules of ISO 9000 family of standards

Mapping of course outcomes with program outcomes

Continuous Internal Evaluation Pattern:

Attendance : 10 marks
Continuous Assessment Test (2 numbers) : 25 marks
Assignment/Quiz/Course project : 15 marks

End Semester Examination Pattern: There will be two parts; Part A and Part B. Part A contain 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 questions from each module of which student should answer any one. Each question can have maximum 2 sub-divisions and carry 14 marks.

Course Level Assessment Questions

Course Outcome 1 (CO1):

1. Distinguish between quality control and inspection.

2. What are the TQM axioms?

3. What are the enablers of total quality?

Course Outcome 2 (CO2)

1. Describe the Deming approach to TQM.

2. List out Crosby's fourteen steps for quality improvement.

3. Describe Juran’s quality trilogy.

Course Outcome 3(CO3):

1. Define strategic quality management.

2. With examples, describe the classification of quality costs.

3. Describe the concepts of Kaizen approach.

Course Outcome 4(CO4):

1. What is meant by employee empowerment with respect to total quality management?

2. What are self managing teams?

3. Describe the importance of leadership in TQM

Course Outcome 5 (CO5):

1. "X and R charts always go hand in hand". Elaborate.

2. What are the measures of Central tendency and dispersion?

3. Describe the principles of cause and effect diagram.

Course Outcome 6 (CO6):

1. Enumerate the benefits of ISO certification.

2. What are the benefits of quality auditing?

3. Enumerate the steps to be followed by a manufacturing organization to obtain ISO 9001 certification

Model Question Paper

APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY

EIGHTH SEMESTER B.TECH DEGREE EXAMINATION

Course Code: MET414 Course Name: QUALITY MANAGEMENT

Max. Marks: 100 Duration: 3 Hours

PART A

Answer ALL questions, each carries 3 marks.

1. Define the term" Quality control".
2. What are the enablers of total quality?
3. Describe the concept of Quality Function Deployment
4. What are the obstacles to achieving successful strategic quality management?
5. What is meant by employee empowerment?
6. Describe the importance of leadership in TQM
7. Describe the principles of cause and effect diagram.
8. Describe the procedure to be followed in a brain storming meeting.
9. Explain the clause in ISO 9001 associated with resource management.
10. What are the benefits of quality auditing?

PART B

(Answer one full question from each module, each question carries 14 marks)

Module-1

11. a) Compare Juran and Deming approaches (7)

b) Explain the characteristics of Total Quality Management. (7)

OR

12 a) Explain the three TQM axioms. (12)

b) Define Quality Planning. (2)

Module-2

13. Describe the steps to be followed to integrate quality into strategic management journey of an organization. (14)

OR

14. (a) Enumerate the objectives and key principles of lean manufacturing paradigm. (7)

(b) Compare traditional and lean manufacturing paradigms. (7)

Module-3

15. What are self managing teams? What are the benefits and problems associated with them? Indicate the key steps to be followed to implement them in organizations. (14)

OR

16. What are the ingredients for success for a quality director? What are the activities to be carried out by a quality director towards assisting upper management with strategic management (14)

Module-4

17. With the aid of an example, describe the principles of cause and effect diagram. (14)

OR

18. Following are the data on the quality costs incurred in a manufacturing company in a month:

Title of the quality cost	Amount in Rupees
Product audits	1,000

Scrap Disposal	50,000
Concessions and Downgrading	40,000
Calibration	2,000
Quality planning	500
Manufacturing losses	30,000
System failure	40,000
Test materials	5,000
Training	2,000
Customer returns	25,000

Classify the above quality costs into preventive, appraisal and failure costs. Conduct Pareto analysis and comment on the results. Suggest a proposal with anticipation on the quality costs observable in future. (14)

Module-5

19. Describe the steps to be followed for conducting a quality audit. (14)

OR

20. Enumerate the steps to be followed by a manufacturing organization to obtain ISO 9001 certification. (14)

Syllabus

Module 1

Introduction to Quality Engineering - Definitions of the terms - quality, quality planning, quality control, quality assurance, quality management, Total Quality Management (TQM)- overview on TQM - the TQM axioms - consequences of total quality- Barriers to TQM- Deming approach to TQM – Juran's quality trilogy- Crosby's fourteen steps for quality improvement

Module 2

Strategic Quality Management: Cost of Quality- Customer satisfaction- Quality Function Deployment (QFD)- Integrating quality into strategic management - quality and the management cycle- obstacles to achieving successful strategic quality management- supplier selection- Concepts of 5S, Six Sigma, Lean, Kaizen

Module 3

Human dimensions of TQM – Top management commitment- Leadership for TQM- Change management- resources for quality activities - training for quality –Employee involvement, motivation empowerment- teamwork- self managing teams - role of the quality director

Module 4

Supporting Tools, Activities And Techniques in TQM Projects : Affinity diagram - brainstorming - cause and effect analysis - process flow chart – check sheets- Scatter diagram - Pareto chart- Histogram and fundamentals of statistics - Control charts for improving process capability- Taguchi's robust design- Total Productive maintenance- Failure Mode and Effect Analysis

Module 5

Quality System: ISO 9000 family of standards- ISO 9001:2000 model, quality management system- management responsibility- resource management- product realisation- measurement analysis and improvements- ISO 14000 family of standards- Quality auditing- types and benefits.

5.4	Quality auditing- types and benefits	1

CODE	COURSE NAME	CATEGORY	L	T	P	CREDIT
MET424	INDUSTRIAL HYDRAULICS	PEC	2	1	0	3

Preamble: This course covers the fundamentals of operating principles, configuration features, functionalities, and applications of various elements in typical hydraulic systems

Prerequisite: NIL

Course Outcomes: After the completion of the course the student will be able to

CO 1	Identify the basic elements of a fluid power system
CO 2	Describe the properties of a hydraulic fluid
CO 3	Distinguish between different types of pumps
CO 4	Explain the operation and features of various hydraulic actuators
CO 5	Describe the purpose, construction and operation of various control valves
CO 6	Develop a hydraulic circuit to perform a desired function

Course Level Assessment Questions

Course Outcome 1 (CO1):

1. Differentiate between hydraulic and pneumatic system
2. Discuss the advantages of fluid power
3. Describe key applications of fluid power
4. Identify the graphical symbols used for various components of fluid power system

Course Outcome 2 (CO2):

1. Describe the properties of hydraulic fluids
2. Discuss the primary functions of hydraulic fluid

Course Outcome 3 (CO3):

1. Explain various types of pumps
2. Compare the various performance factors of gear, vane and piston pumps
3. Explain pressure intensifiers
4. Describe various types of accumulators

Course Outcome 4(CO4):

1. Describe the construction and design features of hydraulic cylinders
2. Identify the various types of hydraulic cylinder cushioning and mountings
3. Explain various types of hydraulic motors

Course Outcome 5 (CO5):

1. Explain the construction, working and applications of various hydraulic control valves

2. Discuss the construction features and functions of conductors

Course Outcome 6 (CO6):

1. Illustrate different hydraulic circuits
2. Describe the applications of accumulator

Model Question Paper

Total Pages:

Reg No.:_____ Name:_____

APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY

EIGHTH SEMESTER B.TECH MINOR DEGREE EXAMINATION,

COURSE CODE: MET424

COURSE NAME: INDUSTRIAL HYDRAULICS

Max. Marks: 100 Duration: 3 Hours

PART A

(Answer all questions; each question carries 3 marks) Marks

1		Comment on the differences between pneumatic and hydraulic fluid power systems	3
2		Differentiate between viscosity and viscosity index. Under what conditions is viscosity index important?	3
3		Derive an expression for the actual volumetric displacement of the vane pump in terms of the dimensions of the pump components	3
4		Discuss about the influence of pressure, size and speed on pump noise level	3
5		Sketch and explain Tandem cylinder	3
6		List the advantages of a hydraulic motor over an electric motor	3
7		Discuss why all fluid power systems are fitted with a pressure relief valve	3
8		Explain the construction features and function of flexible hoses	3
9		Explain the purpose of a regenerative circuit	3
10		Write a note on accumulator as hydraulic shock absorber	3

PART B

(Answer one full question from each module, each question carries 14 marks)

Module -1

11	a)	With the help of a neat sketch, explain the basic components of a hydraulic system	8
	b)	Explain the advantages and disadvantages of a hydraulic system	6
12	a)	Explain the desirable properties of hydraulic fluids	6
	b)	Sketch and describe a rectangular flat-topped reservoir fitted with basic accessories.	8

Module -2

13	a)	Explain with a neat sketch, the working of a gear pump. Also obtain an expression for its volumetric efficiency	8

	b)	With a neat sketch, explain the working of a lobe pump.	6
14	a)	With neat sketch, explain how vane pump can be made to work as a variable displacement pump without changing the speed of the prime mover	7
	b)	Explain the construction and operation of piston-type accumulators	7

Module -3

15	a)	Describe end cushion provided in hydraulic cylinder with neat sketch	
	b)	With the help of a neat sketch, explain the construction and working of a balanced vane motor. Give its main advantage over vane motor.	
16	a)	Sketch a semi-rotary vane motor. Derive an expression for its torque capacity	6
	b)	With a neat diagram, explain the construction and working of in line piston motor (Bent axis design).	8

Module -4

17	a)	Give the classification of check valves and explain the construction and working of pilot-operated check valve, giving the necessary drawing.	7
	b)	Explain with neat sketch, how three way and four way direction control valve operate	7
18	a)	With a neat sketch, explain the construction and working of pressure reducing valve	7
	b)	With a neat sketch, explain spool type direction control valve used to control double acting cylinder	7

Module -5

19	a)	Describe with a neat circuit diagram, fail-safe system that provide overload protection for system components.	6
	b)	Draw the sequencing circuit for operating two double acting cylinders in a sequence in both strokes. Use appropriate component for the circuit & explain its working for a hydraulic system	8
20	a)	With a neat circuit diagram, explain the working of a meter out circuit for controlling the speed of a cylinder	6
	b)	The table of a surface grinding machine needs automatic reciprocating motion. Draw a hydraulic circuit to achieve this motion	8

Syllabus

Module 1

Introduction to fluid power: - Classification of fluid power systems- Basic components, Symbols & circuits of a hydraulic and pneumatic system, Properties of fluids

Hydraulic fluids and fluid handling components: - Fluid for hydraulic systems- Hydraulic fluids reservoirs- Hydraulic seals- Filters and Strainers

Module 2

Hydraulic pumps:- Classification and pumping theory- Principle of working and constructional details of vane pump, gear pumps, radial and axial plunger pumps- Pump performance

Hydraulic pressure intensifiers, Power storage devices –Accumulators

Module 3

Hydraulic actuators:- Linear hydraulic actuators-Types, Cylinder cushions, Rotary actuators – Classification, construction and working of gear, vane, axial and radial piston motors- Limited rotation hydraulic actuators- Hydraulic motor performance

Module 4

Hydraulic control valves:-Classification of control valves- Directional control valves- Pressure control valves- Flow control valves- Servo valves

Hydraulic conductors

Module 5

Hydraulic circuits:- Control of single and double -acting hydraulic cylinder, Regenerative circuit- Pump-unloading circuit, Double-pump hydraulic system, Pressure intensifier circuit, Counter balance valve application, Hydraulic cylinder sequencing circuits, Automatic cylinder reciprocating system, Locked cylinder using pilot check valves, Cylinder synchronizing circuits- Speed control of a hydraulic cylinder, Bleed-off flow control circuit- Fail-safe circuits- Hydraulic motor breaking system, Hydraulic circuit examples with accumulator

Course Contents and Lecture Schedule

No	Topic	No. of Lectures
1	**Introduction to fluid power systems**	
1.1	Introduction to fluid power – Classification of fluid power systems, Hydraulics and pneumatics systems, Hydrostatic and hydrodynamic Systems, Advantages, disadvantages and applications of fluid power	1
1.2	Basic components, symbols & circuits of a hydraulic and pneumatic system, Comparison between hydraulic and pneumatic systems, Comparison of different power systems	2
1.3	Properties of fluids- Density, Specific weight, Specific volume and Specific gravity- Pressure, head and force- Pascal's law and its applications-Bulk modulus-Viscosity and viscosity index	1
1.4	Hydraulic fluids and fluid-handling components:-Fluid for hydraulic systems-Functions of hydraulic fluid, desired properties of hydraulic fluid, Types of hydraulic fluids, Additives and their purposes, Factors influencing the selection of a fluid	1
1.5	Hydraulic fluids reservoirs- Functions, Design and constructional features, Sizing of the reservoir	1
1.6	Hydraulic seals- O-rings, Compression packings, piston cup packings, piston rings and wiper rings, Seal materials-Filters and Strainers - Types of filters, Beta Ratio of filters	1
2	**Hydraulic pumps**	
2.1	Hydraulic pumps: Classification and pumping theory, Gear pump-Construction and working of external gear pump, Advantages and disadvantages, Theoretical flow rate	1
2.2	Construction and working of Internal gear pump, Lobe pump, Gerotor pumps and Screw pump	1
2.3	Construction and working of Vane pump, Advantages and disadvantages ,Theoretical flow rate, Variable displacement vane pump- Balanced vane pump, Advantages and disadvantages	1
2.4	Piston pump- Axial and radial design, Axial piston pump (Bent-axis design, Swash-plate-type piston pump, and Radial piston pump	1
2.5	Pump performance-Volumetric efficiency, Mechanical efficiency and Overall efficiency, Pump performance curve, Pump noise and Pump selection	1
2.6	Hydraulic pressure intensifier:-axial-piston style single and	1

	double-acting hydraulic pressure intensifiers	
2.7	Power storage devices -Accumulators: Types-Weight loaded or gravity type, Spring loaded type and Gas loaded (Nonseparator and separator) type	1
3	**Hydraulic actuators**	
3.1	Linear hydraulic actuators-Types-Single acting and double acting cylinders, Ram cylinders, Telescopic cylinders and Tandem cylinders	1
3.2	Cylinder cushions, Cushioning pressure, Cylinder force, Velocity and Power, Acceleration and deceleration of cylinder loads	1
3.3	Cylinder mountings, Mechanics of hydraulic cylinder loadings-First class, Second class and Third class lever systems	1
3.4	Rotary actuators – Classification, Construction and working of gear, vane, balanced vane, axial (Swash plate and Bent-axis design) and radial piston motors, Limited rotation hydraulic actuators	2
3.5	Theoretical torque, power, flow rate, hydraulic motor performance- volumetric efficiency, mechanical efficiency and overall efficiency, Performance characteristics of hydraulic motor, Comparison of gear, vane and piston motor, Simple numerical problems	2
4	**Hydraulic control valves**	
4.1	Hydraulic control valves-Classification of control valves, Directional control valves-symbolic representation, constructional features of poppet, sliding spool, rotary spool valves, Manual, mechanical, solenoid and pilot operated DCV, shuttle valve, and check valves-Two way, Three way, and Four way valves-Applications	2
4.2	Pressure control valves – types, Simple pressure-relief valve, Compound pressure-relief valve, Pressure-reducing valve, Unloading valve, Counterbalance valve and Pressure-sequence valve- Applications	2
4.3	Flow control valves – Functions of flow control valves, Factors that determine the flow rate across an orifice or a restrictor, compensated and non-compensated FCV, needle valve, temperature compensated, pressure compensated, pressure and temperature compensated FCV, symbolic representation.	1
4.4	Servo valves-Mechanical-hydraulic servo valve, Electrohydraulic servo valve, Proportional control valves	1
4.5	Hydraulic conductors- Conductor sizing, Pressure rating of conductors, Steel pipes, Steel tubing, Plastic conductors and Flexible hoses, Pressure losses in hydraulic conduits	1
5	**Hydraulic circuits**	
5.1	Control of single and Double -acting hydraulic cylinder,	1

	Regenerative circuit- Expression for the cylinder extending speed	
5.2	Pump-Unloading Circuit, Double-pump hydraulic system, Pressure intensifier circuit, Counter balance valve application	1
5.3	Hydraulic cylinder sequencing circuits, Automatic cylinder reciprocating system	1
5.4	Locked cylinder using pilot check valves, Cylinder synchronizing circuits- Parallel and series	1
5.5	Speed control of a hydraulic cylinder-meter-in and meter-out circuit, Meter-in and meter-out flow control of both strokes, Bleed-off flow control circuit	1
5.6	Fail-Safe circuits- Protection from inadvertent cylinder extension and fail-safe overload protection	1
5.7	Hydraulic motor breaking system, Hydraulic circuit examples with accumulator- Accumulator as an auxiliary power source, Accumulator as a leakage compensator, Accumulator as an emergency power source, Accumulator as a shock absorber	1

CODE	COURSE NAME	CATEGORY	L	T	P	CREDIT
MET434	PRESSURE VESSEL AND PIPING DESIGN	PEC	2	1	0	3

Preamble: To gain knowledge of pressure vessel design, designing of piping and piping systems, and familiarize with codes and practices in design.

Prerequisite: Solid mechanics/ Strength of materials

Course Outcomes: After the completion of the course the student will be able to

CO Nos	Course Outcomes	Level of learning domain
CO 1	Explain the design considerations of various shell type pressure vessels	2
CO 2	Explain the design considerations of thick cylinders under various kind of loadings	2
CO 3	Apply design concepts in the design of shell and supports of vertical and horizontal pressure vessels	3
CO 4	Solve problems involving the thickness and stiffener support requirements of cylinders under buckling loads	3
CO 5	Solve problems involving pipe stress and flexibility analysis and also understand the fracture based design concepts of pressure vessels	3

Mapping of course outcomes with program outcomes

Continuous Internal Evaluation Pattern:

Attendance : 10 marks
Continuous Assessment Test (2 numbers) : 25 marks
Assignment/Quiz/Course project : 15 marks

End Semester Examination Pattern: There will be two parts; Part A and Part B. Part A contain 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 questions from each module of which student should answer any one. Each question can have maximum 2 sub-divisions and carry 14 marks.

Course Level Assessment Questions

Course Outcome 1 (CO1):

1. Derive the expression for membrane stresses in axisymmetric shell structure under internal pressure
2. Derive the expression for dilation in cylindrical and spherical pressure vessels under internal pressure
3. Explain the conditions for buckling in ellipsoidal shells and discuss the remedies

Course Outcome 2 (CO2)

1. Derive the Lame's equations of stresses in thick cylinder under internal pressure
2. Find out the stress pattern developed in case of built up cylinders under a given interference

after assembly
3. What are thermal stresses in a pressure vessel and how they are evaluated

Course Outcome 3(CO3):
1. Explain the design steps in the design of tall cylindrical vessel under wind load
2. Explain with neat sketches the supports used in the case of vertical tall self-supported cylindrical vessels
3. Explain with sketches, various stresses developed in a saddle supported horizontal pressure vessel

Course Outcome 4 (CO4):
1. Derive the expression for critical buckling pressure for cylinder under external pressure
2. Explain with sketches the support design for pipes under external pressure
3. Explain the design curves for design of cylinders under both external pressure and compressive axial loading

Course Outcome 5 (CO5):
1. Explain the flexibility analysis of piping system
2. what is meant by modes of fracture? What is stress intensity factor
3. Explain failure assessment diagram and its usage

Model Question Paper

APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY
EIGHTH SEMESTER B. TECH DEGREE EXAMINATION
Course Code: MET 434
Course Name: PRESSURE VESSEL AND PIPING DESIGN

Max. Marks: 100 **Duration: 3 Hours**

PART – A

(ANSWER ALL QUESTIONS, EACH QUESTION CARRIES 3 MARKS)

Part-A

1. Explain the stresses developed in a conical cylinder under internal pressure?
2. Derive the expression for dilation of a spherical shell under internal pressure?
3. Explain with sketches the stress pattern in a built-up cylinder after assembly?
4. Derive the expression for internal pressure for the full cross section yielding of a cylinder?
5. Explain with sketches, any two types of supports used for tall cylindrical vessels?
6. What are the different sections of ASME pressure vessel code?
7. Explain with sketches, stiffener support for pipe under external pressure?
8. Explain the design curves for pipe under both external and axial compressive loading?

9. What is meant by flexibility analysis?
10. What is meant by modes of fracture?

(10X3=30)

PART – B

(ANSWER ONE FULL QUESTION FROM EACH MODULE)

MODULE – 1

11. (a) Derive the general expression for stress equilibrium in an axisymmetric shell under internal pressure (6 marks)

(b) Derive the expression for membrane stresses in an elliptical shell and bring out the condition for local buckling (8 marks)

OR

12. (a) Derive the expression for stresses developed in a thin cylinder under internal pressure (6 marks)

(b) Derive the expression for membrane stresses developed in a torus under internal pressure (8 marks)

MODULE – 2

13. (a) A short Thick cylinder with 1000 mm internal diameter and 1300mm outside diameter subjected to an internal pressure of 40 MPa. Determine the location and magnitude of maximum tangential, radial, shear stresses induced. Find also the dilation of its inner and outer radii. (10 marks)

(b) Sketch the variation of stresses across the thickness of thick cylinder under internal pressure (4 marks)

OR

14. (a) A steel tube of 240 mm external diameter is shrunk on another steel tube of 80 mm internal diameter. Diameter of junction is 160mm. The interference before shrinking is 0.08 mm. Find the tangential stress at outer surface of inner tube (ii) the tangential stress at the inner surface of the outer tube and (iii) radial stress at the junction after assembly. E=200 GPa (6 marks)

(b) Derive the expression for the internal pressure for intermittent yielding of cylindrical pressure vessels? (8 marks)

MODULE – 3

15. (a) Explain the design procedure of a tall vessel under wind load as per ASME code? (8 marks)

(b) Explain with sketches, various supports used in case of tall vessel? (6 marks)

OR

16. (a) Explain the procedure followed in the case of tall vessel under seismic load? (8 marks)

(b) Explain with sketches, various supports used in case of horizontal pressure vessels under internal pressure? (6 marks)

MODULE – 4

17. (a) Derive the critical buckling pressure for a circular ring under external pressure? (8 marks)

(b) Explain the procedure for pipe sizing under external pressure? (6 marks)

OR

18. (a) Discuss the classification of cylinders for design for buckling as per ASME code. (6 marks)

(b) Explain the following terms (i) factors A & B for vacuum design (ii) Buckling coefficients (iii) effect of imperfections on buckling strength ? (8 marks)

MODULE – 5

19. (a) Discuss various methods to increase flexibility in a piping system. (6 marks)

(b) A thick walled cylinder with 300 MPa internal pressure, internal diameter 300mm external diameter 600 mm is having a semi elliptical defect 10mm deep on the inside surface. The aspect ratio of the flaw is 0.1. Check whether vessel is satisfactory from fracture point of view. K_{IC} =180 MPa$\sqrt{m}$. (8 marks)

OR

20.(a) Explain the following (i) Displacement stress range (ii) stress range reduction factor (ii) Sustained and occasional loads. (7 marks)

(b) Explain (i) fracture toughness (ii) leak before break (iii) through thickness/surface flaws. (7 marks)

Syllabus

Module 1

Pressure vessel – Terminology – Types of loads – Types of pressure- Stresses in pressure vessels – Dilation of pressure vessels – Membrane stress analysis of vessel shell components Cylindrical shells, spherical shells, torus, conical head, elliptical head

Bending of circular plates under uniform pressure load with simply supported and clamped edges (no derivation)

Module 2

Stresses in thick walled cylinders – Lame's equation for internal and external pressure Shrink-fit stresses in Built up cylinders, autofrettage of thick cylinders, Thermal stresses and their significance

Module 3

Design of pressure vessels- shell and support design of tall vessel under wind and seismic load

Shell and support design of horizontal vessels

Familiarization with relevant ASME codes and standard practices in pressure vessel design

Module 4

Buckling -Elastic buckling of cylinders or pipes under external pressure- Pipe sizing under external pressure- Design of Stiffeners

Buckling under combined compressive pressure and axial load

Module 5

Pipe stress Analysis -allowable displacement stress range for expected cyclic life-stress intensification factor and flexibility factor-Flexibility Analysis (Analysis as per clause 119.7.1 in Code ASME B31.1/clause 319.4.1 in ASME B31.3 only)

Fracture based design of pressure vessels- modes of fracture-stress intensity factor -through thickness and surface cracks in pressure vessels (mode-I only)-fracture toughness-leak before break-failure assessment diagram

Course Contents and Lecture Schedule

No	Topic	No. of Lectures
1	Design of thin pressure vessels	
1.1	Membrane stresses in general axisymmetric shell under internal pressure	3
1.2	Stresses and dilation in various kinds of components	2
1.3	Bending plates	2
2	**Design of thick pressure vessels**	
2.1	Stresses in thick walled cylinders – Lame’s equation - Shrink fit stresses in built up cylinders in Built up cylinders	3
2.2	Autofrettage in cylinders	2
2.3	Thermal stresses and significance	2
3	**Vertical and horizontal vessel design**	
3.1	Design of tall vertical shell structure and its supports	3
3.2	Design of shell and supports for horizontal vessels	3
3.3	Familiarization with standards and codes	2
4	**Buckling Analysis**	
4.1	Derivation of critical buckling pressure under external pressure	2
4.2	Pipe sizing and stiffener support design	3
4.3	Combined circumferential and axial buckling design	2
5	**Flexibility analysis and fracture design**	
5.1	Pipe stress and flexibility analysis	2
5.2	Fracture fundamentals	2
5.3	SIFs, leak before break and failure assessment diagram	3

CODE	COURSE NAME	CATEGORY	L	T	P	CREDIT
MET444	DATA ANALYTICS FOR ENGINEERS	PEC	2	1	0	3

Preamble: The student will understand the techniques to analyse different types of data, characterize it and can apply them to make decision modelling process more intelligent.

Prerequisite: ***Nil***

Course Outcomes: After the completion of the course the student will be able to

CO 1	Explain different data analysis techniques
CO 2	Discuss the concepts behind the descriptive analytics and predictive analytics of data
CO 3	Familiarize with Big Data and its sources
CO 4	Illustrate different visualization techniques in data analysis

Students should answer all questions. Part B contains 2 questions from each module of which student should answer any one. Each question can have maximum 2 sub-divisions and carry 14 marks.

Course Level Assessment Questions

Course Outcome 1 (CO1):

1. Explain the different types of prediction errors.

2. What is the need for sampling? Explain about different sampling methods.

3. Compare and contrast analysis and reporting in data analytics with suitable example

Course Outcome 2 (CO2)

1. Differentiate descriptive and predictive analysis technique.

2. Explain how attribute selection is carried out in decision tree induction.

3. Write different steps in Apriori algorithm used for finding frequent item sets.

Course Outcome 3(CO3):

1. Explain 3V's in big data analytics

2. List the different sources of bigdata.

3. With suitable example, give the difference between Business intelligence and data analytics.

Course Outcome 4 (CO4):

1. Discuss file system used for big data analysis.

2. Explain how recommender systems help in big data analysis.

3. Explain different techniques used for data visualization,

Model Question Paper

APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY

VIII SEMESTER B.TECH EXAMINATION

MET444 DATA ANALYTICS FOR ENGINEERS

PART A

Answer all questions, each carries 3 marks

1. Explain how significance level affects inferences drawn from data.

2. Define the term correlation between data points.

3. Differentiate classification and prediction.

4. State the different activation functions used in neural networks.

5. Give a brief description about how to perform descriptive analysis in a dataset.

6. Explain frequent item sets in association rule mining with example ?

7. Define bigdata.

8. List the challenges in big data acquisition

9. Explain the term social media analytics.

10. What is the significance of scatter plot matrix?

PART B

Answer any one Question from each module. Each question carries 14 Marks

Module I

11.Give the significance of resampling technique. Explain the different types of resampling techniques.

12. Describe the process of hypothesis technique with the help of a suitable example.

Module II

13. Illustrate regression analysis in predictive modelling.

14. Explain how principal components are extracted using PCA.

Module III

15. Differentiate K-means and hierarchical clustering techniques with suitable example.

16. Describe market-based model used in descriptive analysis.

Module IV

17. With the help of a neat diagram, describe data analytics lifecycle.

18. a. Describe the characteristics of Big data?

    b. Summarize the challenges and applications of big data analytics

Module V

19. What is HDFS? How does it handle Big Data?

20. Illustrate and explain the concept of Map Reduce framework

Syllabus

Module 1 (7 hours)

Introduction to Data Analysis - Evolution of Analytic scalability, analytic processes and tools, Analysis vs reporting - Modern data analytic tools. Statistical concepts: Sampling distributions, re-sampling, statistical inference, prediction error.

Module 2 (7 hours)

Predictive Analytics – Regression, Decision Tree, Neural Networks. Dimensionality Reduction - Principal component analysis

Module 3 (7 hours)

Descriptive Analytics - Mining Frequent item sets - Market based model – Association and Sequential Rule Mining - Clustering Techniques – Hierarchical – K- Means

Module 4 (6 hours)

Introduction to Big data framework - Fundamental concepts of Big Data management and analytics - Current challenges and trends in Big Data Acquisition

Module 5 (8 hours)

Popular Big Data Techniques and tools- Map Reduce paradigm and the Hadoop system- Applications Social Media Analytics, Recommender Systems- Fraud Detection

CODE	COURSE NAME	CATEGORY	L	T	P	CREDIT
MET454	INDUSTRIAL TRIBOLOGY	PEC	2	1	0	3

Preamble: The need for structural integrity of the surfaces of components is an essential requirement from the point of view of reliability of industrial components. Surfaces need to possess special properties so to prevent material loss, and to perform with minimal energy losses by way of friction. Surface treatment methods and prudent lubrication strategies coupled with testing-equipment/probes for conducting the tribological investigations form the basic aspects of tribological management in an industry. This course is meant to introduce the basic aspects of tribology, which a practising engineer or an engineer-analyst working in this area would require.

Prerequisite: Nil

Course Outcomes: After the completion of the course the student will be able to

CO 1	Apply Surface characterisation techniques for tribological investigations
CO 2	Explain theories of friction.
CO 3	Apply theories of wear for industrial problems.
CO 4	Explain Lubrication methods employed in Industrial scenarios.
CO 5	Explain Surface Coating techniques for industrial applications.

End Semester Examination Pattern: There will be two parts; Part A and Part B. Part A contain 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 questions from each module of which student should answer any one. Each question can have maximum 2 sub-divisions and carry 14 marks.

Course Level Assessment Questions

Course Outcome 1 (CO1):

1. Realize the importance of tribology in mechanical engineering design.
2. Introduce tribology as a Surface Science.
3. Introduce the student to surface characterisation.
4. Learn some specific methods for physical and chemical characterisation of surfaces.

Course Outcome 2 (CO2)

1. Define coefficient of friction.
2. Learn an equipment to measure friction at the interface of a tribological pair.
3. Analyse different regimes of lubrication in terms of the Stribeck curve.
4. Learn some aspects of the theory of hydrodynamic lubrication
5. Learn the plowing and adhesion theories of friction

Course Outcome 3(CO3):

1. Define Wear, and methods of quantifying wear.
2. Learn theories of wear.

3. Learn about (i) Four Ball Tester and (ii) Pin-on-disk tester equipment to quantify wear.
4. Discuss wear and friction aspects, in common mechanical engineering scenarios.

Course Outcome 4 (CO4):

1. Introduce methods of classifying lubricants.
2. Learn the use of different lubricants for different industrial applications.
3. Learn about additives in industrial lubricants.
4. Create awareness related to environmental aspects while using lubricants.

Course Outcome 5 (CO5):

1. Introduction to surface treatments for better tribological performance.
2. Learn some specific methods employed in surface engineering for industrial applications.
3. Introduction to maintenance of tribological components and diagnostic methods for health assessment of bearings.

Model Question Paper

MODEL QUESTION PAPER

APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY

EIGHTH SEMESTER B.TECH DEGREE EXAMINATION

COURSE CODE : MET454 COURSE NAME : INDUSTRIAL TRIBOLOGY

MAX. MARKS : 100 DURATION : 3 HOURS

PART – A

(ANSWER ALL QUESTIONS, EACH QUESTION CARRIES 3 MARKS)

1. Write a short note on surface failure modes of machine components.

2. Enumerate few roughness parameters and their significance.

3. Explain the Stribeck diagram with the aid of a typical sketch.

4. Explain the *film-thickness-parameter* used to demarcate boundary lubrication regime.

5. Differentiate between fatigue wear and fretting wear.

6. What is running-in? How is it taken care of in the case of new automobiles?

7. What are extreme pressure lubricants? Make a short note on one method of testing their effectiveness.

8. Write a short note on SAE classification of lubricants.

9. Make a short note on coatings for metal cutting tools.

10. Write a short note on the tribological maintenance of roller chains and wire ropes in industry.

PART – B

(ANSWER ONE FULL QUESTION FROM EACH MODULE)

MODULE – 1

11. (a) Differentiate between (i) backscattered and (ii) secondary images as obtained from a SEM and when is one imaging type preferred over the other? If you want to image surface relief on a surface undergone wear, which type would you use? Why? (7 Marks)

(b) On the same surface, if you want to analyse the distribution of phases on it, which of the above modes should be used? If an element-wise gross estimation of the metallic composition of the transfer layer formed on the surface is to be obtained, can in it be made possible within a SEM? How is it realized? Explain the phenomena. (7 Marks)

OR

12. (a) Compare finding the chemical composition of the surface layer using (I) Energy Dispersive X-ray (EDX)analysis and (ii) X-ray photo-electron spectroscopy. When will you prefer one method over the other? (5 Marks)

(b) Compare roughness characterization using a (i) mechanical stylus interferometry and (ii) optical interferometry. Discuss the merits and de-merits of each method. (5 Marks)

(c) Write short notes on Fractal characterisation of surfaces (ii) Bearing- area-curve (4 Marks)

MODULE – 2

13. Derive the Reynolds' one dimensional bearing lubrication equation which expresses the pressure-gradient in terms of entraining velocity and film thickness factors. What are the simplifying assumptions involved in the derivation? How can this equation be used to determine the load carrying capacity of a hydrodynamic bearing? Plot the radial pressure distribution in the case of a cylindrical journal in a long hydrodynamic bearing. (14 Marks)

OR

14. (a) Compare theories of friction. (5 Marks)

(b) Describe method to visualize and lubricant film and make measurements, in a laboratory experiment. (7 Marks)

(c) Viscosity of the lubricant is not a significant parameter under boundary lubrication conditions-discuss. (2 Marks)

MODULE – 3

15. (a) Derive the Archard's wear equation. What is the usual range of values for Archard's wear coefficient? (5 Marks)

(b) Discuss methods of quantifying wear (2 Marks)

(c) Compare wear theories (7 marks)

OR

16. (a) Are friction and wear always correlated? Discuss (4 Marks)

(b) Compare and contrast pin-on-disk testing and four-ball-wear-testing (6 Marks)

(c) Write a short note on improving wear resistance of cylinder liners in engines. (4 Marks)

MODULE – 4

17. (a) Make short notes on the following terms in the context of liquid lubricants: (i) Viscosity Index (ii) ISO viscosity grades (iii) SAE viscosity grades (iv) pour point depressants (v) Anti Wear (AW) and Extreme pressure (EP) additives (vi) Bio-degradability (vii) Eco-toxicity (14 Marks)

OR

18. (a) Metal working fluids have functions different from that of usual tribological fluids used in industry- discuss. (3 Marks)

(b)What are the factors limiting the applicability of vegetable oils for tribological applications in automobiles. (2 Marks)

(c) Discuss methods for engine oil testing (3 Marks)

(d) Explain Environmental impact assessment related to lubricating oils (3 Marks)

(e) Explain the classification of engine oils (3 Marks)

MODULE – 5

19 (a) Explain different methods used for testing of coatings (4 Marks)

(b) Briefly describe about the application of engineering coatings in aircraft industry (4 Marks)

(c) Differentiate between PVD and CVD processes with practical examples from industry applications (6 Marks)

OR

20 (a) What are signs of bearing failure? Explain a diagnostic method of monitoring bearing health? (7 Marks)

(b) Discuss improvements in Cylinder-liner technologies for improved tribological performance in IC engines. (7 Marks)

Syllabus

Module 1 (7 Hours)

Tribology as a Surface Science- Tribological considerations in design of machine elements, and industrial maintenance - surface failure of machine components-Physical and chemical characterization of surfaces-Surface roughness- tools for roughness characterization-Industrial norms in roughness quantification/characterization-surface finish symbols-Characterization of surface morphology – The Scanning Electron Microscope- backscattered and secondary imaging- X-ray dispersive analysis-. X-ray photo-electron spectroscopy and chemical characterization of surface films.

Module 2 (7 Hours)

Friction-coefficient of friction- Stribeck curve-Lubrication regimes- Film thickness parameter- Fundamentals of hydrodynamic lubrication - Hydrodynamic pressure profile-Visualization and Measurement of film thickness in well lubricated contacts. Boundary lubrication-plowing and adhesion components-Pin-on-plate arrangement to measure friction. Theories of friction

Module 3 (7 Hours)

Wear – wear of metals-wear of polymers- Types of wear: adhesive wear-abrasive wear-corrosive wear-fretting wear- quantification of wear- wear debris analysis. Pin-on-disk machine and the Four Ball Tester. Friction and wear in the context of internal combustion engines, Bearings, Gears, cams and tappets, and in metal machining.

Module 4 (8 Hours)

Lubricants: Classification according to Carbon distribution-Viscosity Index-Viscosity Grades and their choice for various applications-Engine oil viscosity classification. Selection of industrial Lubricating oils. Metal working lubricants. Types of additives in lubricants for improved tribological performance. Environmental aspects and sustainability aspects related to use and disposal of lubricating oils, recycling.

Module 5 (7 Hours)

Surface Engineering: Thermal Diffusion Methods(carburizing,Nitriding, Nitro-carburising, boriding, chromizing) –Methodical Methods for coating development-PVD Methods-CVD Methods-Electrochemical deposition-Thermal spraying.

Bearings-Classification of Bearings-Bearing materials-Bearing maintenance, diagnostic maintenance of Tribological components and considerations in IC engines and automobile parts, roller chains and wire ropes.

Course Contents and Lecture Schedule

No	Topic	No. of Lectures
1	**Module-1**	**7**
1.1	Importance of Tribology in design of machine elements	1 Hour
1.2	Surface roughness- Industrial norms in roughness quantification- surface finish symbols	1 Hour
1.3	Tools for roughness characterization-	1 Hour
1.4	The Scanning Electron Microscope-	1 Hours
1.5	backscattered and secondary imaging- X-ray dispersive analysis	1 Hours
1.6	X-ray photo-electron spectroscopy and chemical characterization and surface films.	2 hours
2	**Module-2**	**7**
2.1	Coefficient of friction and Pin-on-plate arrangement to measure friction.	1 Hour
2.2	Stribeck curve-Lubrication regimes- Film thickness parameter	1 Hour
2.3	Fundamentals of hydrodynamic lubrication - Hydrodynamic pressure profile	2 Hours
2.4	Visualization and Measurement of film thickness in well lubricated contacts	1 Hour
2.5	Boundary lubrication-plowing and adhesion components	1 Hour
2.6	Theories of friction	1 Hour
3	**Module-3**	**7**
3.1	Wear of metals	1 Hour
3.2	Types of wear	1 Hours
3.3	Quantification of wear	1 Hour
3.4	Wear of polymers	1 Hour

3.5	Pin-on-disk machine and the Four Ball Tester.	1 Hour
3.6	Friction and wear in the context of internal combustion engines, Bearings, Gears, cams and tappets, and in metal machining.	2 Hours
4	**Module-4**	**8**
4.1	Classification of liquid lubricants according to Carbon distribution-	1 Hour
4.2	Viscosity Index-Viscosity Grades and their choice for various applications	2 Hours
4.3	Engine oil viscosity classification	1 Hour
4.4	Selection of industrial Lubricating oils. Metal working lubricants.	2 Hours
4.5	Types of additives in lubricants for improved tribological performance	1 Hour
4.6	Environmental aspects related to use and disposal of lubricating oils, recycling.	1 Hour
5	**Module-5**	**7**
5.1	Carburizing, Nitriding, Nitro-carburising, boriding, chromizing	2 Hours
5.2	PVD-CVD-Electrochemical deposition-Thermal spraying	2 Hours
5.3	Bearings-Classification of Bearings-Bearing materials-	1 Hour
5.4	Diagnostic maintenance of Tribological components	1 Hour
5.5	Maintenance of gear boxes, roller chains and wire ropes.	1 Hour

MET464	MICRO AND NANO MANUFACTURING	PEC	2	1	0	3

Preamble: This course serves to enable the learners to understand the underlying principles, processes and applications with regard to broader areas of micro manufacturing and nanotechnology. It also covers dimensional metrology aspects and tools for micro and nanoscale manufacturing.

Prerequisite: Nil

Course Outcomes: After the completion of the course the student will be able to:

CO 1	Explain different techniques used in micro and nano manufacturing
CO 2	Describe conventional techniques used in micro manufacturing.
CO 3	Describe non-conventional micro-nano manufacturing approaches.
CO 4	Outline the working principle and applications of micro and nano finishing processes
CO 5	Explain the basics of micro and nano fabrication techniques.
CO 6	Apply and select metrology systems in micro and nano manufacturing.

Mapping of course outcomes with program outcomes:

	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12

Continuous Internal Evaluation Pattern

Attendance : 10 marks
Continuous Assessment Test (2 numbers) : 25 marks
Assignment/Quiz/Course project : 15 marks

End Semester Examination Pattern: There will be two parts; Part A and Part B. Part A contains 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 questions from each module, of which student should answer any one. Each question can have maximum 2 sub-divisions and carry 14 marks.

Course Level Assessment Questions

Course Outcome 1 (CO1):

1. Explain different techniques used in micro and nano manufacturing.
2. Explain typical fabrication process for an Integrated Chip.
3. Describe 3 basic regimes of fabrication at microscale.

Course Outcome 2 (CO2):

1. Discuss application areas of micro-turned components.
2. Point out limitations and challenges of micro-extrusion process.
3. List out any 4 application areas of micro-milling process.

Course Outcome 3 (CO3):

1. How are micromolds designed?
2. Discuss the principle and process of micro-EDM.
3. Discuss the principle and process of micro-LBM.

Course Outcome 4 (CO4):

1. With the help of a suitable diagram, explain the principle of Magnetorheological finishing process.
2. Describe Magnetic Float Polishing.

3. Draw the schematic of Elastic Emission Machining and explain.

Course Outcome 5 (CO5):

1. Explain how an elastic stamp is manufactured using soft lithographic techniques.

2. Describe the structure and properties of CN tubes.

3. What are the different approaches to deposition of diamond in a CVD Diamond process. Explain.

Course Outcome 6 (CO6):

1. Explain Scanning white-light interferometry with the help of a suitable diagram.

2. Outline unique metrological challenges faced in micro-nano manufacturing?

3. Explain Scanning Electron Microscopy in detail.

Model Question Paper

MET464 MICRO AND NANOMANUFACTURING

Max. Marks: 100 Duration: 3 hours

Part−A

Answer all questions. Each question carries 3 marks

.

1. Define microgrinding.
2. Point out any 3 differences between macroturning and microturning.
3. Why are high speed air turbine spindles useful for micromachining?
4. What is hot embossing? Why is it particularly suited for manufacturing of optical components?
5. Draw the schematic of Chemical Mechanical Polishing process.
6. Illustrate the mechanism of material removal in Ion beam machining.
7. List out various materials used in semi-conductor industry.
8. Show by a schematic how an elastic stamp is manufactured using soft lithography?
9. Draw the schematic of typical scanning white light interferometry set up.
10. What are the merits and demerits of On-machine metrology?

Part−B

Answer one full question from each module.

Module I

11. Discuss in detail the design requirements of microturning machines. (14 marks)

OR

12. Discuss the outcomes of microgrinding of ceramic materials. (14 marks)

Module II

13. Discuss the Focused Ion Beam system. (14 marks)

OR

14. Discuss various methods available for manufacturing of micromolding tools. (14 marks)

Module III

15. Describe Magnetic float polishing with a neat diagram. (14 marks)

OR

16. Discuss the principles of MRAFF process with a suitable diagram. (14 marks)

Module IV

17. Explain how a Field effect transistor is fabricated by the process of soft lithography? (14 marks)

OR

18. Describe all properties of Carbon Nanotubes. (14 marks)

Module V

19. Explain the operation of scanning tunneling microscope. (14 marks)

OR

20. What is Atomic force microscope? Explain its modes of operation. (14 marks)

Syllabus

Module 1

Introduction to principles of micro and nano fabrication techniques- microfabrication of semi-conductor devices-standard micro machining flow chart- basics of micro fabrication-manipulative techniques. Introduction to mechanical micro machining: Micro drilling-process, tools and applications, Micro turning- principle, process, tools and applications, Diamond micro turning- principle, process, tools and applications, Micro milling and Micro grinding-processes, tools and applications, Micro extrusion- principle, process and applications.

Module 2

Introduction to Non-conventional micro-nano manufacturing: Abrasive Jet Micro-machining, WAJMM- principle, process and applications. Micro EDM, Micro WEDM, Micro EBM-principle, process and applications. Micro ECM, Micro LBM, Focused Ion Beams- process, principle and applications. Micro moulding processes: Injection moulding, Reaction injection moulding, hot embossing, injection compression moulding- micromolding tools-applications.

Module 3

Introduction to micro-nano finishing processes: Magnetorheological Finishing (MRF) processes, Magneto-rheological Abrasive Flow Finishing (MRAFF) processes- Principle, equipment and applications- Force analysis for MRAFF process. Magnetic float polishing (MFP), Elastic Emission machining (EEM), Ion Beam Machining (IBM), Chemical Mechanical Polishing (CMP)- principle, equipment and applications

Module 4

Introduction to Nano Fabrication: Nano fabrication using soft lithography- principle and applications. Introduction to Carbon nano materials- CN tubes- properties and applications. CN tube transistors-Diamonds- properties and applications- CVD Diamond technology- LIGA process. Laser micro welding- Electron Beam Micro welding.

Module 5

Introduction to micro-nano inspection and metrology: Scanning electron microscopy, Scanning white light interferometry, Optical Microscopy, Scanning probe Microscopy, Scanning tunnelling microscopy, Confocal microscopy, Atomic force microscopy. Introduction to On-machine metrology.

MET474	HEATING AND VENTILATION SYSTEMS	PEC	2	1	0	3

Preamble: The objectives of the course are:

- The course aims at exposing the students to the areas of heating ventilation and air conditioning air conditioning systems and their applications.
- The students will be capable to select suitable system for an application.
- The students will be equipped with the basic technical knowledge regarding the subject, present trends and sustainable practices.

Pre-requisite: MET473 Refrigeration and Air conditioning.

Course Outcomes: After the completion of the course the student will be able to

CO 1	Explain the quality of air to be supplied for comfort and healthy condition.
CO 2	Compare different HVAC systems for an application.
CO 3	Design a HVAC system by selecting suitable components and environmentally safe refrigerant.
CO 4	Evaluate the cooling load and capacity requirement of ac machine
CO 5	Design the duct for HVAC and make the drawing.

Continuous Internal Evaluation Pattern:

Attendance : 10 marks
Continuous Assessment Test (2 numbers) : 25 marks
Assignment/Quiz/Course project : 15 marks

End Semester Examination Pattern:

There will be two parts; Part A and Part B. Part A contain 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 questions from each module of which student should answer any one. Each question can have maximum 2 sub-divisions and carry 14 marks.

Course Level Assessment Questions

Course Outcome 1 (CO1):

1. What is the need of mixing return air to outdoor air?
2. Explain different types of air filters used and their specification?
3. Explain the % outdoor air requirements for different application?

Course Outcome 2 (CO2)

1. Explain VRF system and its advantages?
2. Explain terminal reheat system and its merits?
3. Explain all water system of refrigeration and its draw backs?

Course Outcome 3 (CO3):

1. Describe different types of refrigerants and their relative ODP and GWP?
2. Differentiate between scroll type compressor and reciprocating compressor?
3. What is cooling tower and explain its working principle?

Course Outcome 4 (CO4):

1. An Auditorium has seating capacity 800 people is to be maintained at 23°C DBTand50% RH. The outdoor conditions are 40°C DBT and 27°C WBT. The various loads in the office are: Solar heat gain 10KW, sensible heat gain per occupant 80W, Latent heat per occupant 70W, Lighting load 5KW, Sensible heating load from other

sources 12KW, Infiltration load 0.3m^3/sec. Outdoor air and return air is mixed in the ratio of 1: 6 ,before cooling coil (processing unit) and then supplied to room. The supply temperature cannot be lower than 12^0C .find capacity of the plant required, mass flow rate of air.

2. What are ESR, ISEER, GSHF and RSHF? Explain.

3. Explain the method of basement ventilation Systems?

Course Outcome 5 (CO5):

1. What are the general aspects to be considered while designing a duct system?

2. Explain equal friction method of determination of duct size?

3. Write any five notations, legends, symbols used in HVAC drawing.

Model Question Paper

APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY

HEATING AND VENTILATION SYSTEMS–MET474

MAXIMUM: 100 MARKS **DURATION: 3 HOURS**

PART A

Answer all questions. Each question carries 3 marks

1. What is HEPA filter? Where it is used?
2. What is the need of mixing return air to outdoor air??
3. What is the need of air water system of air conditioning system?
4. What is the difference between CAV and VAV system of air conditioning?
5. What are ODP and GWP of a refrigerant?
6. What are the disadvantages of hydrocarbon reorients?
7. What is IPLV of an ac system?
8. Explain the method of basement ventilation Systems?
9. Write any five notations, legends, symbols used in HVAC drawing.
10. What is throw of air?

(10 X 3 = 30 Marks)

PART B

Answer one full question from each module

MODULE 1

11. a.Explain the % outdoor air requirements for different application? 7 marks

    b. Explain comfort chart? How to locate comfort region for all-round air conditioning? 7 marks

12. a. Explain effective temperature? What are the factors effecting effective temperature? . 7 marks

    b. Explain any two methods of dehumidification and represent it as line diagram in psychrometric chart. 7 marks

MODULE II

13. a. Explain Dual duct system with the help of neat sketch? 7 marks

    b. Explain VRF system and its advantages over the conventional system? 7 marks

14. a. Explain all air system of air conditioning with the help of neat sketch? 7 marks

    b. Explain the air conditioning system suitable for an auditorium, restaurant and bed room with proper justifications? 7 marks

MODULE III

15. a. Explain CFC, HCFC, and HFC, HC refrigerants with suitable examples and relative merits and demerits. 7 marks

    b. What are the methods to check leak and ensure capacity during commissioning of an ac system? 7 marks

16. a. Explain scroll type compressor with the help of a neat sketch? 7 marks

    b. What is the use of a cooling tower? Explain the working with the help of a neat sketch. 7 marks

MODULE IV

17. a. An Auditorium has seating capacity 800 people is to be maintained at 23°C DBTand50% RH. The outdoor conditions are 40°C DBT and 27°C WBT. The various loads in the office are: Solar heat gain 10KW, sensible heat gain per occupant 80W, Latent heat per occupant 70W, Lighting load 5KW, Sensible heating load from other sources 12KW, Infiltration load 0.3m^3/sec. Outdoor air and return air is mixed in the ratio of 1: 6 ,before cooling coil (processing unit) and then supplied to room. The supply temperature cannot be lower than 12^0C .find capacity of the plant required, mass flow rate of air. 10 marks

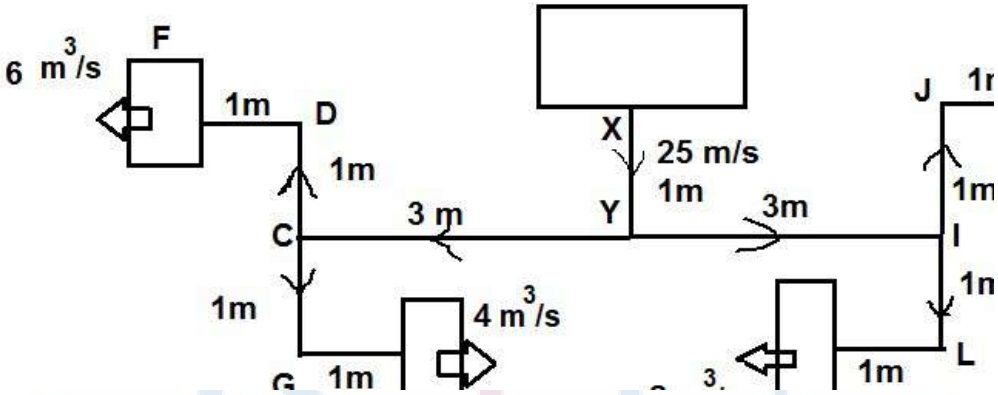
    b. Explain different thermal insulation materials used in ac system. 4 marks

18.a. Explain various heating loads in an auditorium? How infiltration load accounted while calculating RSHF 7 marks

b. explain bypass factor. Represent the bypass factor in a psychrometric chart for a cooling coil. 7 marks

MODULE V

19 a. A packaged air conditioner serves four rooms in an apartment. The schematic layout of the duct system together with the volume flow rate to each room is shown in Figure. The duct shall be of standard round sections. The air velocity in the first section is not to exceed 25 m/s. There is a pressure drop of 5 Pa at each of the outlet grilles at F,H,M and K. Assume the resistance due to the fittings as below. Assume pressure drop at Elbow 2 pa, pressure drop at Tee joint= 1Pa. Determine the size of the duct system using the equal-friction method. Estimate the static pressure drop in each line



12 marks

b. What is spread of air? 2 marks

20 a. Explain Principles of air distribution. 7 marks

b. draw a simple drawing of an air conditioning system for a conference hall of seating capacity 50 people? 7 marks

Syllabus

Module 1- Introduction to HVAC

Importance of HVAC systems. Standard requirements of ventilation air for different applications. Air changes per hour -Conditions for comfort –comfort chart, effective temperature. Factors effecting effective temperature, Methods of dehumidification, humidification, and temperature control. Mixing of air stream. Type of air filters and their specification, HEPA filters.

Module 2 Air conditioning systems.

Unitary system, window , split system, central station system, all air system, all water system, air-water system, VAV system , CAV systems Terminal reheat system, Dual duct system, Multi- zone system, Fan Coil units , relative merits and demerits – selection of particular system for an application. Cassette ac system. VRF system and inverter AC - relative merits.

Module 3 Components of HVAC

Type of Compressors used- rotary, reciprocating, scroll type- cooling and heating coil. Environment friendly refrigerants.CFC, HCFC, HFC, HC refrigerants.Ozone depletion potential(ODP), global warming potential(GWP), use of boilers in HVAC, ducts, electrical systems for HVAC, air distribution system -types of outlets- diffusers- condensers, cooling tower, air handling unit, pumps, air dampers. Hot water generator and chilled condenser water piping. Testing and maintenance on ducts and pipes. Refrigerant leak detection methods.

Module 4 Systems and Applications

Capacity determination of an ac machine. COP, EER, IEER, IPLV, star rating, specification of capacity TONs, HP, Cooling load calculation, sensible heat loads, latent heat loads, SHF, RSHF, GSHF, infiltration, bypass factor, Numerical examples. Methods to check the capacity during commissioning of new ac machine. Passive techniques to reduce cooling loads or heating loads in building. Insulation materials.

Basement ventilation Systems, Basement ventilation. Car park ventilation, Toilet, pantry ventilation.

Module 5 Duct design

General consideration of duct design. Duct size determination. Equal friction method, balanced capacity method, Static regains method assumed velocity method. Location with due consideration for reduction of heat gain. Layout of supply and return air ducts. General considerations in air duct design layout. Throw of air, Spread of air, Entrainment ratio, Principles of air distribution, Sound and Vibration control techniques.

HVAC drawings, understanding notations, legends, symbols used in HVAC drawing.

Text Books

1. Refrigeration and Air Conditioning, Arora C.P, Tata McGraw hill.

2. A Course in Refrigeration and air conditioning Arora S. C. and S. Domkundwar, Dhanpat Rai and Company. 2002

3. A text book of Refrigeration and air conditioning – R.K .Regiput, Katson books.

4. Refrigeration and air conditioning - Ahamadul Ameen Eastern economy addition.

5. Heating, Ventilating, and Air Conditioning: Analysis and Design, Faye C. Mcquiston, Jerald D. Parker, Jeffrey D. Spitler, John Wiley and sons. New York

Data books

1. Refrigeration tables and charts including air conditioning data, C P Kothandaraman, New Age International.

2. Refrigeration and air conditioning data book, Domkunduwar and Domkundwar, Dhanpat Rai & co.

Reference books

1. ASHRAE Handbook 201(Volume 1, 2, 3)

2. Principles of heating ventilation and air conditioning in building, john Dixon, Delmar learning

3. Analysis and design of heating ventilation and air conditioning system, Herbert W Stanford and Adam F spach, CRC press -Taylor and Francis.

CODE	COURSE NAME	CATEGORY	L	T	P	CREDIT
MET416	COMPOSITE MATERIALS	PEC	2	1	0	3

Preamble: This course helps the students to understand the concept of various matrices and reinforcements used in composites. The course also covers about types of fibers, polymer matrix composites, metal matrix composites, ceramic matrix composites and its manufacturing and applications, micromechanics of composites

Prerequisite: EST100 METALLURGY & MATERIAL SCIENCE

Course Outcomes: After the completion of the course the student will be able to

CO1	To understand history about composites, various matrices and reinforcements used in composites
CO2	To understand types of fibers/ whiskers used in composites, structure, properties and applications, manufacturing process
CO3	To know about polymer matrix composites, classification, properties, characteristics and applications, manufacturing methods.
CO4	To know about metal matrix composites, classification, properties, characteristics and applications, manufacturing methods. Alloys and their potential role as matrices in composites. To understand about intermetallics.
CO5	To know about ceramic matrix composites, classification, properties, characteristics and applications, manufacturing methods, micromechanics of composites

Continuous Internal Evaluation Pattern:

Attendance : 10 marks
Continuous Assessment Test (2 numbers) : 25 marks
Assignment/Quiz/Course project : 15 marks

End Semester Examination Pattern:

There will be two parts; Part A and Part B. Part A contain 10 questions with 2 questions from each module and having 3 marks for each question. Students should answer all questions. Part B contains 2 questions from each module of which student should answer any one. Each question carries 14 marks and can have a maximum of 2 subdivisions.

Course Level Assessment Questions

Course Outcome 1 (CO1):

1 Explain about history of evolution of composites
2 Explain about the function of reinforcement and matrix in composite
3 Classify the composite according to type of matrix and reinforcement
4 What are the advantages and disadvantages of composites
5 Discuss about smart composites
6 Explain about types of bonding at interface
7 Explain about wettability of composites

Course Outcome 2 (CO2)

1 Compare between natural fibers and synthetic fibers
2 Explain the procedure of boron fiber fabrication
3 Explain Ex-Pan carbon fiber and Ex-Pitch carbon fiber fabrication
4 With neat sketched explain Ex-cellulose carbon fiber.
5 Discuss about aramid fiber fabrication
6 Explain whiskers with examples.

Course Outcome 3(CO3):

1 Discuss about thermoset, thermoplastic and elastomeric polymeric materials
2 Explain different hand lay methods
3 Expalin different moulding methods for PMC

Course Outcome 4 (CO4):

1 How the metal matrix composites are classified
2 Explain the role of intermetallics in MMC
3 What are the properties, characteristics and applications of MMC
4 Explain different production techniques of MMC

Course Outcome 5 (CO5):

1 How CMC are classified and their potential role as matrices material.
2 What are the properties, characteristics and applications of CMC.
3 Explain conventional techniques for the production of CMC.
4 Explain maximum stress and strain criterion related to micromechanics of composites
5 Derive expression for Tsai-Hill and Tsai-Wu failure criterion.

Model Question Paper

APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY

EIGHTH SEMESTER B.TECH DEGREE EXAMINATION

Course Code : MET416

Course Name : COMPOSITE MATERIALS

Max. Marks : 100 Duration : 3 Hours

PART – A

(ANSWER ALL QUESTIONS, EACH QUESTION CARRIES 3 MARKS)

1) What are the conditions to be satisfied for a material to be called as a composite material.

2) Define wettability in fiber-matrix bonding and its importance in composite properties.

3) What are the important application of aramid fibers.

4) Write a short note on Boron fibers.

5) Compare thermosetting and thermoplastic matrix material.

6) List the function of components in pultrusion technique used in PMCs.

7) What are the modifications required in casting process for improving the properties of metal matrix composites.

8) Name the metals and their properties used in metal matrix composites.

9) With the aid of neat sketch explain lanxide process.

10) What are the different failure modes of fiber composites?

PART – B

(ANSWER ONE FULL QUESTION FROM EACH MODULE)

MODULE – 1

11. (a) Classify the composite materials based on the geometry of the reinforcement and matrix. (7 Marks)

(b) Explain the different types of bonding interfaces in composites with sketches.

(7 Marks)

OR

12. (a) What are the advantages of composite materials over the conventional engineering materials? (6 marks)

(b) Explain about 1) Fiber pull out 2) Delamination 3) Fiber bridging 4) Debonding (8 Marks)

MODULE – 2

13. (a) How the carbon fibers are produced from PAN? (7 marks)

(b) Describe the filament winding process in polymer matrix composites. (7 marks)

OR

14. (a) Explain different types of whiskers with examples. (7 marks)

(b) Write a short note on wet jet spinning process for producing aramid fibers

(7 marks)

MODULE – 3

15. (a) With neat sketch, explain the hand lay-up process? (7 marks)

(b) With neat sketches explain manufacturing of laminated composite using prepreg (7 marks)

OR

16. (a) Explain the significance of various polymer materials used for PMC production? (7 marks)

(b) With neat sketch, explain the bag moulding process? (7 marks)

MODULE – 4

17. (a) With neat sketches explain about In situ process by unidirectional solidification (7 marks)

(b) With the aid of neat sketch explain Squeeze casting method for MMC? (7 marks)

OR

18. (a) Explain application of precipitation-hardenable alloy materials used in the manufacture of metal matrix composites (7 marks)

(b) Write a short note about diffusion bonding. (7 marks)

MODULE – 5

19. (a) With neat sketches explain liquid infiltration process in ceramic matrix composites (7 marks)

(b) State and explain the maximum- stress theory for predicting the composite failure (7 marks)

OR

20. (a) Explain the in-situ chemical reaction techniques for CMC production? (7 marks)

(b) Describe the Tsai-Hill failure criteria for composites. (7 marks)

SYLLABUS

Module 1

Composite : Introduction, definition, characteristics, functions, classification of composites based on structure and matrix , smart composites, advantages and limitations, history, industrial scene and applications, Interfaces: wettability and bonding interface in composites. types of bonding at interface.

Module 2

Fibers : Introduction, types of fibers, natural fibers, glass fiber fabrication, structure, properties and applications, boron fiber fabrication, structure, properties and applications, carbon fiber, Ex-Pan carbon fiber, Ex cellulose carbon fiber, Ex-Pitch carbon, carbon fiber structure, properties and applications, aramid fiber fabrication, structure, properties and applications, whiskers: characteristics, properties and applications.

Module 3

Polymer matrix composites (PMC) : thermoset, thermoplastic and elastomeric polymers, properties, characteristics and applications as matrix materials, processing of polymer matrix composites: hand methods, Lay up method, spray up method, moulding methods, pressure bagging and bag moulding methods, Autoclave-based processing with prepregs, pultrusion and filament winding process.

Module 4

Metal matrix composites (MMC) : classification of metals, intermetallics, alloys and their potential role as matrices in composites, properties, characteristics and applications of metals as matrix materials, production techniques: powder metallurgy, diffusion bonding, melt stirring, squeeze casting, liquid infiltration under pressure, insitu process.

Module 5

Ceramic matrix composites (CMC) : classification of ceramics and their potential role as matrices, properties, characteristics and applications of ceramics as matrix materials, conventional techniques : cold pressing and sintering, hot pressing, reaction bonding, liquid infiltration, pultrusion. lanxide process, insitu chemical technique, sol-gel technique, Micromechanics of composites: maximum stress and strain criterion (derivations only). Tsai-Hill and Tsai-Wu failure criterion (derivations only). mechanics of load transfer from matrix to fiber (description)

Course Contents and Lecture Schedule:

No	Topic	No of lectures + Tutorial
1	**Module 1: Introduction to composites**	**7 hours**
1.1	Composite : Introduction, definition, characteristics, functions	1L
1.2	Classification of composites based on structure and matrix: History, industrial scene and applications	1L
1.3	Smart composites, advantages and limitations	1L+1L
1.4	Interfaces: wettability and bonding interface in composites	1L
1.5	Types of bonding at interface.	1L + 1T
2	**Module 2: Types of fibers/ whiskers used in composites**	**7 hours**
2.1	Fibrs : Introduction, types of fibers, natural fibers	1L
2.2	Fiberization, stabilization, carbonization, graphitization, glass fiber Fabrication, structure, properties and applications	1L
2.3	Boron fiber fabrication, structure, properties and applications	1L
2.4	Carbon fiber, Ex-Pan carbon fiber, Ex-Pitch carbon, Ex cellulose carbon fiber	1L + 1T
2.5	Aramid fiber fabrication, structure, properties and applications	1L
2.6	Whiskers: characteristics, properties and applications.	1L
3	**Module 3: Polymer matrix composites**	**6 hours**
3.1	Polymer matrix composites (PMC) : thermoset, thermoplastic and Elastomeric polymers	1L
3.2	Properties, characteristics and applications as matrix materials	1L
3.3	Processing of polymer matrix composites: hand methods, Lay up method, spray up method	1L
3.4	Moulding methods, pressure bagging and bag moulding methods, Autoclave-based processing with prepregs	1L + 1T
3.5	Pultrusion and filament winding process.	1L

4	**Module 4: Metal matrix composites**	**7 hours**
4.1	Classification of metals, intermetallics, alloys and their potential role as matrices in composites	2L
4.2	Properties, characteristics and applications of metals as matrix materials	1L
4.3	Production techniques: powder metallurgy, diffusion bonding, melt stirring	1L + 1T
4.4	Squeeze casting, liquid infiltration under pressure, insitu process.	1L + 1T
5	**Module 5: Ceramic matrix composites & Micromechanics of composites**	**8 hours**
5.1	Classification of ceramics and their potential role as matrices	1L
5.2	Properties, characteristics and applications of ceramics as matrix materials	1L
5.3	Conventional techniques : cold pressing and sintering, hot pressing, Reaction bonding, liquid infiltration, pultrusion.	1L
5.4	Lanxide process, insitu chemical technique, sol-gel technique	1L
5.5	Micromechanics of composites: maximum stress and strain criterion (derivations only)	1L + 1T
5.6	Tsai-Hill and Tsai-Wu failure criterion (derivations only)	1L
5.7	Mechanics of load transfer from matrix to fiber (description only)	1L

MET426	ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING	PEC	2	1	0	3

Preamble: This course is specifically designed for Mechanical Engineers to get acquainted with essential mathematical concepts, brush up on their statistics and the fundamentals of ML and AI

Prerequisite: NIL

Course Outcomes: After the completion of the course the student will be able to

CO Nos	Course Outcomes	Level of learning domain
CO 1	Illustrate the basic mathematics of artificial intelligence and Machine learning	2
CO 2	Explain the concepts of artificial intelligence	2
CO 3	Explain machine learning techniques and computing environment that are suitable for the applications under consideration	2
CO 4	Develop scaling up machine learning techniques and associated computing techniques and technologies for various applications	3
CO 5	Explain data analytics and Machine learning Applications	2

Continuous Internal Evaluation Pattern:

Attendance : 10 marks
Continuous Assessment Test (2 numbers) : 25 marks
Assignment/Quiz/Course project : 15 marks

End Semester Examination Pattern: There will be two parts; Part A and Part B. Part A contain 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 questions from each module of which student should answer any one. Each question can have maximum 2 sub-divisions and carry 14 marks.

Course Level Assessment Questions

Course Outcome 1 (CO1):
1. Define Maximum error estimate
2. Define simple correlation and write formula for simple correlation coefficient
3. Write the expression for the control line and three sigma for mean Chart

Course Outcome 2 (CO2)
1. What is Artificial Intelligence?
2. Application of Artificial Intelligence
3. Explain about neural networks?

Course Outcome 3(CO3):
1. Machine learning concepts with examples.
2. Discuss supervised and unsupervised learning?
3. Write a program using python

Course Outcome 4 (CO4):
1. Explain KNN?
2. What is web scraping?
3. Discuss about Natural Language processing

Course Outcome 5 (CO5):
1. What are the benefits of Data science for Mechanical Engineers?
2. Explain about Numpy and pandas
3. Write about the potential applications of Machine learning in manufacturing sector?

Model Question Paper

MET 426 - ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING

Max. Marks : 100 **Duration : 3 Hours**

Part – A

Answer all questions, each question carries 3 marks

1. Define Maximum error estimate
2. Write the normal equations for the least square curve of the form $y = ab^x$
3. What are the Problem Characteristics of Artificial Intelligence?
4. What is a Rule based programming?
5. Define machine learning.
6. Discuss any four examples of machine learning applications
7. Write down the major differences between K-means clustering and hierarchical clustering
8. Explain the different string formats available in Python with examples
9. What is data science and its benefits?
10. What are the goals of data science?

PART -B

Answer one full question from each module.

MODULE – 1

11. Find moment generating function for binomial distribution and hence find its mean and variance (14 marks)

OR

12. Samples of size 2 are taken from the population 4,8,12,16,20,24 with replacement. Find
    a) The mean of the population
    b) The standard deviation of the population
    c) Mean of the sampling distribution of means
    d) The standard deviation of the sampling distribution of mean. (14 marks)

MODULE – 2

13. Give details of the year-wise development of AI. How AI is being used in the area of Mechanical engineering research (14 marks)

OR

14. (a) Differentiate between the various learning methods: neural networks, reinforcement learning and genetic algorithm (8 marks)
    (b) What are the various heuristic techniques .Explain how they are different from the solution guaranteed techniques (6 marks)

MODULE – 3

15. Distinguish between supervised learning and Reinforcement learning. Illustrate with an example (14 marks)

OR

16. (a) Write a program to print the sum of the following series 1 + 1/2 + 1/3 +. …. + 1/n (8 marks)
    b) Explain the need for continue and break statements. Write a program to check whether a number is prime or not. Prompt the user for input. (6 marks)

MODULE – 4

17. Explain about web scraping and discuss about the possibility of usage (14 marks)

OR

18. (a) Explain about Semantic Analysis? (4 marks)

b) What do you understand by Natural Language Processing? List any two real-life applications of Natural Language Processing. (10 marks)

MODULE – 5

19. (a) Illustrate with an example different stages of data science project. (8 marks)

b) How the AI technology used in automobile industry (6 marks)

OR

20. Explain the importance of Machine learning concepts in manufacturing sector (14 marks)

Syllabus

Module 1

Fundamentals of probability and statistics – Probability theory- sample and population – statistical interference – random process – logical relations – conditional probability – density function – distributions – regressions – parametric estimation – non parametric – statistical test.

Module 2

Introduction to artificial intelligence - Typical Applications, Keras API, Artificial Neural Networks (ANNs): Concept, Activation Functions, Feed Forward Neural Networks and Back Propagation-Working of CNN, Convolutional Layer, Pooling, Flatten, Image recognition techniques and feature Extraction fundamentals

Module 3

Machine learning: Introduction, Types of Machine Learning: Supervised, Unsupervised and Reinforcement learning, Applications, Classification vs Prediction Problems, Linear Regression Algorithm, Python Basics – string, number, list, tuple, Dictionary, functions, conditional statement, Loop statements, simple programming exercises using python

Module 4

Introduction to KNN (K Nearest Neighbor), Working of KNN, Decide the value of K, Confusion Matrix, Accuracy Score, Web Scraping Basics- Need of Web Scraping, Natural Language Processing: Introduction, Stages in natural language Processing, Application of NLP in Real world applications

Module 5

Introduction to Data Science, Flow of Data Science, Numpy, Pandas, Matplotlib. Machine Learning Applications across Industries.

CODE	COURSE NAME	CATEGORY	L	T	P	CREDIT
MET436	ACOUSTICS AND NOISE CONTROL	PEC	2	1	0	3

Preamble: Course objectives:

- To understand the principles of acoustics.
- To give awareness about different acoustic measurement instruments and analysis equipment.
- To introduce the importance of noise control
- To give awareness about regulations and standards related to noise exposure.

Prerequisite: Nil

Course Outcomes: After the completion of the course the student will be able to

CO No.	Course Outcomes	Level of learning domain
CO 1	Explain various acoustic terminologies and understand the physics behind acoustic wave propagation	2
CO 2	Evaluate reflection and transmission coefficients in sound transmission through different media and understand the concept of standing waves	5
CO 3	Explain the mechanism of hearing, concept of noise, various noise criteria and standards	2
CO 4	Explain different noise measures and various noise measurement devices	2
CO 5	Apply noise control measures to different machines and devices	3

Mapping of course outcomes with program outcomes

Students should answer all questions. Part B contains 2 questions from each module of which student should answer any one. Each question can have maximum 2 sub-divisions and carry 14 marks.

Course Level Assessment Questions

Course Outcome 1 (CO1):

1. Derive acoustic wave equation. Deduce the equation for plane acoustic wave

2. Describe about Acoustic impedance, Energy density and Sound intensity.

3. a) Discuss about different 'levels' of sound measurement

b) A harmonic plane wave is propagating with frequency 35 Hz in air at room temperature. The acoustic pressure at a point 1.5 m from the sound source at a time 2 s from the instant of observation is 0.2 Pa. Find the acoustic pressure at the same point at 4 s.

Course Outcome 2 (CO2)

1. Describe about spherical waves, beam width and directivity index.

2. Sound wave is propagating from a fluid medium of density ρ_1 to a fluid medium of density ρ_2 at an angle of incidence θ_i. Speed of sound in first medium is c_1 and that in second medium is c_2. Obtain the pressure reflection and pressure transmission coefficient.

3. There was some concern that over-water flights of the supersonic transport would harm marine life. A plane sound wave from the aircraft in air (ρ = 1.1kg/m^3 , c= 347 m/s) has a sound pressure of 140 dB. The sound wave strikes the surface of the sea water (ρ = 1022kg/m3 , c=1500 m/s) normally .Determine the intensity of the transmitted wave in sea water and the magnitude of the rms acoustic pressure of the transmitted wave

Course Outcome 3(CO3):

1. With the help of a neat sketch explain the hearing mechanism in human beings

2. a)Describe about speech interference level and perceived noise level

   b)Explain about threshold of hearing

3. Describe about any two noise standards

Course Outcome 4 (CO4):

1. Brief about sound level meter and dosimeter

2. a) Explain about the working of noise analyser

   b) What are microphones?

3. How sound is measured in a reverberation chamber and in an anechoic chamber

Course Outcome 5 (CO5):

1. Explain about absorption coefficient. What are acoustic absorbers? Brief about any one type of acoustic absorber

2. a) Suggest some measures to control the noise produced by sound source.

   b) How noise can be controlled in reciprocating machines?

3. What are possible causes for noise in a rotating machinery? Explain some measures to control such noise

Model Question Paper

APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY
EIGHTH SEMESTER B. TECH DEGREE EXAMINATION
Course Code: MET436
Course Name: ACOUSTICS AND NOISE CONTROL

Max. Marks: 100 **Duration: 3 Hours**

PART – A

(Answer all questions, each question carries 3 marks)

1. What are plane acoustic waves?
2. Explain about sound pressure level?
3. A fan alone produces a sound intensity level of 80 dB. A pump and a fan together produce an intensity level of 86.2 dB. Determine the intensity level of the sound produced by the pump.
4. What are Helmholtz resonators?
5. Describe about plenum chambers.
6. Discuss about phon.
7. How standing waves are generated?
8. Brief about spherical waves
9. Describe about frequency weighting
10. Discuss about Number noise index

PART – B

(ANSWER ONE FULL QUESTION FROM EACH MODULE)

Module – 1

11. a) Derive acoustic wave equation. Deduce the equation for plane acoustic wave (9 Marks)

    b) A harmonic plane wave is propagating with frequency 35 Hz in air at room temperature. The acoustic pressure at a point 1.5 m from the sound source at a time 2 s from the instant of observation is 0.2 Pa. Find the acoustic pressure at the same point at 4 s. (5 Marks)

12. a) Elaborate about particle velocity and phase velocity (4 Marks)

    b) Obtain the D Alembert's solution of plane acoustic wave equation

    c) Calculate the speed of sound in air having a density of 1.225 kg/m^3 and pressure of 101 kPa. Take the adiabatic constant as 1.44. (3 Marks)

Module 2

13. a) A plane wave is incident at the boundary between air and helium at 20 degree C. Given that at 20degree C air density is 1.2041 kg/m^3 , speed of sound in air is 343

m/s, helium density is 0.179 kg/m^3 and speed of sound in helium is 972 m/s. Find the reflection coefficient, transmission coefficient and absorption coefficient (7 marks)

b) Brief about beam width and directivity index. (5 Marks)

c)What are resonators? (2 Marks)

14. a) Obtain the pressure reflection and pressure transmission coefficient for the oblique incidence of sound on a medium boundary. (10 marks)

b) Obtain the acoustic pressure developed in a pipe of length L whose one end is closed. Sound source is a vibrating piston attached to the open end of the pipe. (4 Marks)

Module 3

15. a)With suitable figure, explain the hearing mechanism in human ear. (8 Marks)

b)With suitable example describe about perceived noise level and speech interference level (6 Marks)

16. a) Human react differently to different sounds. With suitable instances describe about human reactions to various sounds and noises (8 Marks)

b) Brief about OSHA noise exposure criteria (6 Marks)

Module 4

17. a) Brief about reverberation chambers and anechoic chambers. Describe in detail about how measurements are done in them (10 marks)

b)Explain the working of dosimeter (4 Marks)

18. a) With the help of a neat diagram, explain the working of sound level meter (8 marks)

b) What are microphones. Brief about any one type (6 marks)

Module 5

19. a)Describe about (8 Marks)

(i) Mufflers

(ii) Acoustic filers

b)Brief about acoustic absorbers (6 Marks)

20.a) What are bafflers. Explain how noise reduction is attained through baffler(7 Marks)

b)Discuss the ways by which noise produced by rotating machines can be controlled (7 marks)

Syllabus

Module 1

Introduction – Basic acoustic principles, sound pressure, acoustic velocity, particle velocity, acoustic wave equation, Plane acoustic wave, harmonic solution.

Frequency, wavelength, acoustic impedance, sound power, sound intensity, Energy density, Decibel scale – relationship between pressure, intensity and power

Module 2

Spherical waves – radiation – simple source – hemispherical source- radiating piston – pressure intensity distribution – Beam width and directivity index

Transmission through one, two and three media – Transmission through pipes – branched and unbranched, resonators – Transmission loss- reflection at plane surface, standing waves, standing wave apparatus.

Module 3

Ear its structure and function, Hearing Thresholds, Loudness of Sound, and Sound Adaptation, Human reaction to sound – definitions of speech interference level, perceived noise level, phon and sone, hearing loss. Noise criteria and standards – noise and number index guide lines for designing quieter equipments

Module 4

Noise measurement- microphones, sound level meters, sound intensity probes, dosimeters, noise analyzer and graphic level recorder, spectrum Analysis, Measurement in anechoic and reverberation chambers

Module 5

Principles of noise control, control at source, during transmission and at receiver- protection of receiver, Acoustic insulation – acoustic materials – acoustic filter and mufflers – plenum chamber, advanced acoustic absorbers

Principles of noise control in machinery such as pumps, rotating machines, reciprocating machines etc

Text Books

1. Kinsler and frey – Fundamentals of Acoustics
2. I. L. Ver, L. L. Beranek– Noise and Vibration Control Engineering
3. Grad – Industrial noise and vibration

Reference Books

1. Malcom J Crocker , Handbook of noise and vibration control, John Wiley & Sons, Inc.

2. Heinrich Kuttruff, Acoustics an introduction, Taylor & Francis
3. David-A Bies. Collin H Hansen, Engineering Noise control- Theory and Practice, Fourth edition, Spon press, London
4. Michael Moser, Engineering Acoustics, Springer

Course Contents and Lecture Schedule

No	Topic	No. of Lectures
1	**Module 1**	
1.1	Introduction – Basic acoustic principles, sound pressure, acoustic velocity, particle velocity	1
1.2	Acoustic wave equation, Plane acoustic wave, harmonic solution	3
1.3	Frequency, wavelength, acoustic impedance, sound power, sound intensity, Energy density, Decibel scale – relationship between pressure, intensity and power	3
2	**Module 2**	
2.1	Spherical waves – radiation – simple source – hemispherical source- radiating piston – pressure intensity distribution – Beam width and directivity index	1
2.2	Transmission through one, two and three media	3
2.3	Transmission through pipes – branched and unbranched, resonators – Transmission loss- reflection at plane surface, standing waves, standing wave apparatus.	3
3	**Module 3**	
3.1	Ear its structure and function, Hearing Thresholds, Loudness of Sound, and Sound Adaptation	2
3.2	Human reaction to sound – definitions of speech interference level, perceived noise level, phon and sone, hearing loss	2
3.3	Noise criteria and standards – noise and number index guide lines for designing quieter equipments	3
4	**Module 4**	
4.1	Noise measurement- microphones, sound level meters, sound intensity probes, dosimeters, noise analyzer and graphic level recorder, spectrum Analysis	5
4.2	Measurement in anechoic and reverberation chambers	3
5	**Module 5**	
5.1	Principles of noise control, control at source, during transmission and at receiver- protection of receiver, Acoustic insulation –	4

	acoustic materials – acoustic filter and mufflers – plenum chamber, advanced acoustic absorbers	
5.2	Principles of noise control in machinery such as pumps, rotating machines, reciprocating machines etc	3

CODE	COURSE NAME	CATEGORY	L	T	P	CREDIT
MET446	HEAT TRANSFER EQUIPMENT DESIGN	PEC	2	1	0	3

Preamble: The course is designed to provide a complete design knowledge of various heat transfer equipments which are invariably used in most of the chemical process industries.

Prerequisite: MET204 Thermodynamics, MET302 Heat and Mass Transfer

Course Outcomes: After the completion of the course the student will be able to

CO 1	Analyse thermal performance of heat exchangers
CO 2	Explain performance of cooling towers
CO 3	Design heat pipes for different applications

Mapping of course outcomes with program outcomes

Continuous Assessment Test (2 numbers)	: 25 marks
Assignment/Quiz/Course project	: 15 marks

End Semester Examination Pattern: There will be two parts; Part A and Part B. Part A contain 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 questions from each module of which student should answer any one. Each question can have maximum 2 sub-divisions and carry 14 marks.

Course Level Assessment Questions

Course Outcome 1 (CO1):

1. How double pipe heat exchangers are classified

2. Explain the concept of true temperature difference in a 1-2 heat exchanger.

Course Outcome 2 (CO2)

1. Illustrate and explain the functions of cooling tower.

2. Explain briefly how performance evaluation of cooling towers are done .

Course Outcome 3(CO3):

1. Explain the working principle of heat pipes

2. Explain briefly the heat pipe design procedure.

Model Question Paper

APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY

EIGHTH SEMESTER B.TECH DEGREE EXAMINATION

COURSE CODE: MET446

COURSE NAME: HEAT TRANSFER EQUIPMENT DESIGN

Max. Marks: 100 **Duration: 3 Hours**

PART – A

(Answer all questions, each question carries 3 marks)

1. What do you mean by compact heat exchanger and write the importance of area density in it.

2. Under what condition, the effectiveness NTU method is preferred over LMTD method as a method of analysis of Heat exchanger.

3.Are we really getting extra advantage by providing Baffles in Shell and tube heat exchanger. Justify your answer.

4. What are the causes of pressure drop in shell and tube heat exchanger?

5. How size of cooling tower and wet bulb temperature are related?

6. How do you calculate evaporation loss in cooling tower?

7. Explain the term liquid pressure drop as applicable to heat pipes

8. How effective thermal conductivity of a wick structure is determined ?

9. How heat pipes work against gravity ?

10. Write short notes on micro heat pipes.

PART – B

(Answer one full question from each module)

MODULE – 1

11. a) How fouling is dealt while designing heat exchangers. (4 Marks)

b) A counter-flow double-pipe heat exchanger is to heat the cold fluid from 30°C to 65°C at a rate of 2 kg/s. The heath ig is to be accomplished by hot fluid available at 100°C at a mass flow rate of 1 kg/s. The inner tube is thin-walled and has a diameter of 1.5 cm. Specific heat of the hot fluid is 10kJ/kgK and that of the cold fluid is 5 kJ /kgK. If the overall heat transfer coefficient of the heat exchanger is 640 W/m2 °C, determine the length of the heat exchanger required to achieve the desired heating. (10 Marks)

OR

12 a) Derive the effectiveness of counter flow heat exchanger (8 Marks)

b) What would be the effectiveness of counter flow heat exchanger if Cmin/Cmax = 0 and Cmin/Cmax=1 (6 Marks)

MODULE – 2

13.The condenser of a large steam power plant is a heat exchanger in which stem is condensed to liquid water. Assume the condenser to be a shell-and-tube heat exchanger consisting of a single shell and 30,000 tubes, each executing two passes. The tubes are of thin wall construction with D=25 mm, and steam condenses on their outer surface with an associated convection coefficient of h0=11,000 W/m.K the heat transfer rate that must be effected by the exchanger is q=2×10^9 W , and this is accomplished by passing cooling water through the tubes at a rate of 3×10^4 kg/sec. the water enters at 20°C while the steam condenses at 50 degree C. What is the temperature of the cooling water emerging from the condenser? What is the required tube length L per pass? (14 Marks)

OR

14. a) Draw rough sketch of temperature distribution curve for condenser and evaporator type heat exchangers. Derive the expression for overall heat transfer coefficient for shell and tube type heat exchanger (7 marks)

b) A heat exchanger is to be designed to condensate 8 kg/s of an organic liquid having saturation temperature 800C and hfg = 600kJ/kg. Cooling water is available at 150C and at a flow rate of 60 kg/s. The overall heat transfer co-efficient is 480 W/m2 -K. Determine: (1) The number of tubes required if tubes are to be 2mm thick,4.85 m in length and 25mm OD. (2) No.s of tube passes if limiting velocity of cooling water is 2 m/s. (7 marks)

MODULE – 3

15. a) Explain different types of cooling towers (8 marks)

b) Explain the terms a) Cooling range b) Approach and c) Effectiveness as applied to a cooling tower (6 marks)

OR

16. a) Write about the importance of wet bulb temperature in cooling towers? (7 marks)

b) What is the effect of change in heat load on cooling tower performance? Explain.

(7 marks)

MODULE – 4

17. Write short notes on a) Working fluids b) Wick Structures as applicable to heat pipes? (14 marks)

OR

18. Explain briefly capillary, sonic, entrainment and boiling limitations applied to heat pipes (14 marks)

MODULE – 5

19. Explain how fluid selection, wick selection and material selection are done in a heat pipe design. (14 marks)

OR

20. Write brief notes on Non conventional heat pipes (14 marks)

Syllabus

Module 1

Thermal performance analysis of heat exchangers - compact, cross flow, liquid to gas, and double pipe heat exchangers, film coefficients for tubes and annuli, equivalent diameter of annuli, fouling factors, caloric or average fluid temperature, true temperature difference; Design calculation of double pipe heat exchanger, double pipe exchangers in series-parallel arrangements.

Module 2

Shell and tube heat exchangers - tube layouts, baffle spacing, classification of shell and tube exchangers, Design calculation of shell and tube heat exchangers, shell-side film coefficients, shell-side equivalent diameter, true temperature difference in a 1-2 heat exchanger, performance analysis of 1-2 heat exchangers, flow arrangements for increased heat recovery.

Module 3

Direct contact heat transfer - Classification of cooling towers, wet-bulb and dew point temperatures, Lewis number, cooling-tower internals, heat balance, heat transfer by simultaneous diffusion and convection; Design and analysis of cooling towers, determination of the number of diffusion units, performance evaluation of cooling towers, influence of process conditions and operating variables on their design .

Module 4

Heat pipes - types and applications, operating principles, working fluids, wick structures, control techniques, pressure balance, maximum capillary pressure, liquid and vapor pressure drops, effective thermal conductivity of wick structures, capillary limitation on heat transport capability, sonic, entrainment, and boiling limitations, determination of operating conditions

Module 5

Heat pipe design – fluid selection, wick selection, material selection, preliminary design considerations, heat pipe design procedure, determination of heat pipe diameter, design of heat pipe containers, wick design, entertainment and boiling limitations, design problems;

Non conventional heat pipes – flat, rotating, reciprocating and disc shaped heat pipes, heat pipes in cooling microelectronics – micro and mini heat pipes.

Course Contents and Lecture Schedule

No	Topic	No. of Lectures
1.1	Thermal performance analysis of heat exchangers - compact, cross flow, liquid to gas, and double pipe heat exchangers,	2
1.2	Film coefficients for tubes and annuli, equivalent diameter of annuli, fouling factors, caloric or average fluid temperature, true temperature difference; Design calculation of double pipe heat exchanger	3
1.3	Double pipe exchangers in series-parallel arrangements.	2
2.1	Shell and tube heat exchangers - tube layouts, baffle spacing, classification of shell and tube exchangers, Design calculation of shell and tube heat exchangers, shell-side film coefficients, shell-side equivalent diameter, true temperature difference in a 1-2 heat exchanger,	4
2.2	performance analysis of 1-2 heat exchangers, flow arrangements for increased heat recovery.	3
3.1	Direct contact heat transfer - Classification of cooling towers, wet-bulb and dew point temperatures, Lewis number, cooling-tower internals, heat balance, heat transfer by simultaneous diffusion and convection;	3
3.2	Design and analysis of cooling towers, determination of the number of diffusion units, performance evaluation of cooling towers, influence of process conditions and operating variables on their design .	4
4.1	Heat pipes - types and applications, operating principles, working fluids, wick structures, control techniques, pressure balance, maximum capillary pressure, liquid and vapor pressure drops, effective thermal conductivity of wick structures,	3
4.2	capillary limitation on heat transport capability, sonic,	3

	entrainment, and boiling limitations, determination of operating conditions	
5.1	Heat pipe design – fluid selection, wick selection, material selection, preliminary design considerations, heat pipe design procedure, determination of heat pipe diameter, design of heat pipe containers, wick design, entertainment and boiling limitations,	5
5.2	design problems; Non conventional heat pipes – flat, rotating, reciprocating and disc shaped heat pipes, heat pipes in cooling microelectronics – micro and mini heat pipes.	3

CODE	COURSE NAME	CATEGORY	L	T	P	CREDIT
MET456	ROBOTICS AND AUTOMATION	PEC	2	1	0	3

Preamble: The objective of this course is

- To know the wide applications of Robotic technology in various domains
- To familiarize various robot sensors and their perception principles that enable a robot
- To get a basic understanding about the kinematics and dynamics of robot.

Course Outcomes: After the completion of the course the student will be able to

CO 1	Explain the concept, development and key components of robotics.
CO 2	Apply the mathematics used to describe positions and orientations in space.
CO 3	Solve numerical problems in the statics and dynamics of robotic models.
CO 4	Explain various robot sensors and their perception principles.

End Semester Examination Pattern: There will be two parts; Part A and Part B. Part A contain 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 questions from each module of which student should answer any one. Each question can have maximum 2 sub-divisions and carry 14 marks.

Course Level Assessment Questions

Course Outcome 1 (CO1):

1. Describe the major elements of an industrial robot.
2. What is work volume?
3. Compare pneumatic drive robots with stepper motor drive robot.

Course Outcome 2 (CO2)

1. Define base and tool coordinate systems.
2. Determine the translated vector for the given vector v=25i+10j+20k, perform a translation by a distance of 8 units in “X” direction, 5 units in “Y” direction and 0 units in “Z” direction.
3. Explain any two commands associated with the programming of end effectors.

Course Outcome 3 (CO3):

1. Describe briefly the dynamics of a robot.
2. A single-link robot with a rotary joint is motionless at θ=-50 . It is desired to move the joint in a smooth manner to $\theta = 80°$ in 4 seconds. Find the coefficients of a cubic which accomplishes this motion and brings the arm to rest at the goal.
3. Write a critical note on forward kinematics of a 2 degrees of freedom robot.

Course Outcome 4 (CO4):

1. Differentiate between the sensor & transducer.
2. Explain the working principle of inductive proximity sensor.
3. What are the applications of machine vision system?

Model Question Paper

Max. Marks: 100 Duration: 3 Hours

PART A ***(30 marks)***

Answer all questions, each carries 3 marks.

1. Briefly explain the need of robots in healthcare.
2. Explain the working of a UAV.
3. Differentiate between open and closed kinematic chain with the help of examples.
4. What is the difference between internal grippers and external grippers?
5. Define the singularities of a mechanism.
6. How will you obtain the dynamic model of a robot?
7. Explain the need of mapping in the kinematics of robots.
8. What is trajectory planning in robotics?
9. Briefly explain the function of a LVDT.
10. What are the applications of machine vision system?

PART B ***(70 marks)***

Answer any one question from each module, each carries 14 marks.

Module 1

11. a) Classify the industrial robots and briefly describe it. (7)

    b) Explain the various parts of a robot with neat sketch. (7)

12. a) Explain the working of DC servo motors used in robotics. (7)

    b) Discuss about the salient features of servo motor with limitations. (7)

Module 2

13. a) Explain RRR and RPR mechanism. (8)

    b) Explain actuator space, joint space and Cartesian space of a manipulator. (6)

14. Explain the different types of frames used in robot motion. (14)

Module 3

15.	a)	What are the four parameters in DH representation? Explain how they are determined?	(8)
	b)	If the two links of a two-link planar manipulator have equal lengths, find out the expression for the homogeneous transformation matrix.	(6)
16.		Illustrate the forward and reverse kinematics of a robot with an example.	(14)

Module 4

17.		Obtain equations of dynamics for 2-R manipulator using lagrangian method.	(14)
18.	a)	Explain the propagation of velocity from link to link in a manipulator.	(8)
	b)	Explain the joint space and cartesian space descriptions of robot trajectory	(6)

Module 5

19.	a)	Describe the classification of sensors and the factors to be considered for its selection.	(7)
	b)	Describe force sensing with strain gauge and wrist force sensor.	(7)
20.	a)	Explain the segmentation methods used in vision system with suitable example.	(7)
	b)	Describe any one algorithm for image edge detection with advantages.	(7)

Syllabus

Module 1 (7 hours)

Introduction: History and evolution of Robotics, Industrial Robots, Field and Service Robots, Wheeled Mobile Robots, Underwater Robots, remotely operated vehicles, Autonomous Underwater Vehicle, Robotics for Healthcare, Rehabilitation Robotics, Aerial Robotics, Domestic Robots. Components of a Robot: Mechanical systems, Electrical systems. Robot drive systems: Pneumatic Drives – Hydraulic Drives –Mechanical Drives – Electrical Drives – D.C. Servo Motors, Stepper Motor, A.C. Servo Motors – Salient Features. Applications.

Module 2 (7 hours)

Spatial description and Transformations: Description of Position and Orientation, Rotation matrix, Euler angles, Frames and Displacement mappings, Homogeneous transforms, Transformation of free vectors.
Robot Manipulator: Manipulator joints- linear and rotary, Types. Link description, Link-connection description. Robot architecture, Convention for affixing frames to links, reference frames, degree of freedom. Common body and arm configurations in industrial robots- Cartesian, polar, cylindrical, jointed arm, SCARA. Wrist assembly- end effector, Mechanical gripper.

Module 3 (7 hours)

Robot Kinematics: Robot Coordinates- global and tool coordinates. Link and joint parameters Denavit and Hartenberg convention, DH algorithm. Typical examples of forward and Inverse Kinematics problem.
General considerations in trajectory description and generation: joint-space schemes, Cartesian-space schemes.

Module 4 (7 hours)

Robot statics: motion of the links of a robot, velocity propagation from link to link, geometric Jacobian, Jacobian computation, kinematic singularities, static forces in manipulators, Jacobians in the force domain, Cartesian transformation of velocities and static forces.
Robot Dynamics: manipulator dynamic equations, Lagrangian formulation of manipulator dynamics, dynamical model of simple manipulator structures.

Module 5 (7 hours)

Sensors and machine vision: Requirements of a sensor, Principles and Applications of the following types of sensors – Position of sensors (Piezo Electric Sensor, LVDT, Resolvers, Optical Encoders), Range Sensors (Triangulation Principle, Structured, Lighting Approach, Laser Range Meters).
Proximity Sensors (Inductive, Capacitive and Ultrasonic), Touch Sensors, (Binary Sensors, Analog Sensors), Wrist Sensors, Compliance Sensors, Slip Sensors. Camera, Frame Grabber, Sensing and Digitizing Image Data – Signal Conversion, Image Storage, Lighting Techniques.

MET466	TECHNOLOGY MANAGEMENT	PEC	2	1	0	3

Preamble: Management of innovation and technology is important an organisation. This course is designed to facilitate the students to understand the concept of technology management, Key issues in managing technology. This course will also help the students to gain a fair understanding on contemporary topics in technology and innovation management.

Prerequisite: NIL

Course Outcomes: After the completion of the course the student will be able to

CO 1	Be conversant with important terms for technology management in organisations
CO 2	Explain the need of technology forecasting
CO 3	Understand the essence of technology acquisition
CO 4	Describe the elements of technology strategy
CO 5	Outline the basics of innovation
CO 6	Identify human factors in technology management

End Semester Examination Pattern: There will be two parts; Part A and Part B. Part A contain 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 questions from each module of which student should answer any one. Each question can have maximum 2 sub-divisions and carry 14 marks.

Course Level Assessment Questions

Course Outcome 1 (CO1):

1. Distinguish between process technology and product technology

2. What are the impacts of technology on society?

3. Describe the significance of technology management.

Course Outcome 2 (CO2)

1. Describe the need of technology forecasting.

2. List out technology forecasting methods.

3. Describe characteristics of technology forecasting.

Course Outcome 3(CO3):

1. What is technology acquisition?

2. With examples, describe the process of managing acquired technology.

3. Describe the importance of technology generation.

Course Outcome 4 (CO4):

1. What are the constraints in technology absorption?

2. What are elements of technology strategy?

3. Describe the science and technology policy in India

Course Outcome 5 (CO5):

1. Differentiate between invention and innovation.

2. Describe the importance of innovation in product lifecycle

3. Enumerate the importance of trademarks.

Course Outcome 6 (CO6):

1. Explain the challenges of automation in India

2. What are the HR issues in R&D?

3. What are the different organisational factors to be considered in technology management.

Model Question Paper

APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY

EIGHTH SEMESTER B.TECH DEGREE EXAMINATION

COURSE CODE: MET466 COURSE NAME: TECHNOLOGY MANAGEMENT

Max. Marks: 100 Duration: 3 Hours

PART A

Answer ALL questions, each carries 3 marks.

1. Describe the impact of technology in competition
2. Distinguish between process technology and product technology
3. What is technology acquisition?
4. Describe the need of technology forecasting.
5. How technology absorption improves competitiveness?
6. Describe the benefits of technology absorption
7. How is R&D affects production costs?
8. Describe the role of government in innovation.
9. How does organisational structure affect technology?
10. What are the HR issues in R&D?

PART B

11. What are the elements of technological innovation? Explain with examples (14)

OR

12. Enumerate the impact of technology on society (14)

13. Describe characteristics of technology forecasting. (14)

OR

14. With examples, describe the process of managing acquired technology. (14)

15. Describe the constraints in technology absorption (14)

OR

16. What are the different elements of science and technology policy in India (14)

17. With the aid of examples, describe how innovation helps new product development (14)

OR

18. What are the different remedial measures against infringement (14)

19. Describe various human factors to be considered in technology management. (14)

OR

20. Describe the challenges of automation in India. (14)

Syllabus

Module 1

Technology and Technology Management - Technology- evolution and growth of technology, technology management: concepts and definitions, role and significance of technology management, impact of technology on society and business. Technology and competition, organizing technology at the enterprise level, key issues in managing technological innovation and forms of technology- process technology, product technology.

Module 2

Technology Acquisition and Technology Forecasting - Technology acquisition, new technology, alternatives for acquiring new technologies, management of acquired technology, technology forecasting, characteristics of technology forecasting, technology forecast methods, principles of technology forecasting, technology forecasting process, need and role of technology forecasting, forecasting methods and techniques, planning and forecasting. Technology generation and development, technology generation, process, technology development, importance of technology generation and development.

Module 3

Technology strategy and management - Need for technology strategy, technology adoption, diffusion, absorption and competitiveness, elements of technology strategy, role of technology absorption, benefits of technology absorption, constraints in technology absorption, technology package and technological dependence, Indian experience in technology absorption efforts, issues involved in the management of technology absorption and government initiatives, technology policies, science and technology policy in India.

Module 4

Management of R&D and innovation - Importance of Research and Development (R&D), corporate research and product lifecycle, production costs and R&D, translation of R&D efforts to technology, innovation, types of innovation, difference between innovation and invention, framework for management of innovation, organizational characteristics that facilitate innovation, trademarks, copyrights, patents and their use in innovation management, remedy against infringement, the role of technology transfer in innovation and new product development, role of government in innovation, globalisation and innovations, technology and innovation management - case studies about management of R&D and innovation.

Module 5

Human Aspects in Technology Management - Integration of people and technology, human factors to be considered in technology management - organisational factors and psychological factors, organisational structure and technology, implications of technological change, implementation of rationalization and automation in India, impact of technological change, human resource management issues in R&D and innovation, technology assessment and environmental impact analysis

1.3	Forms of technology- process technology, product technology.	1
2	**Technology Acquisition and Technology Forecasting**	
2.1	Technology acquisition, new technology, alternatives for acquiring new technologies, management of acquired technology	2
2.2	Technology forecasting, characteristics of technology forecasting, technology forecast method, principles of technology forecasting, technology forecasting process, need and role of technology forecasting, forecasting methods and techniques, planning and forecasting.	3
2.3	Technology generation and development, technology generation-process, technology development, importance of technology generation and development.	2
3	**Technology strategy and management**	
3.1	Need for technology strategy, technology adoption, diffusion, absorption and competitiveness, elements of technology strategy	2
3.2	Role of technology absorption, benefits of technology absorption, constraints in technology absorption, technology package and technological dependence, Indian experience in technology absorption efforts.	3
3.3	Issues involved in the management of technology absorption, government initiatives, technology policies - science and technology policy in India.	2
4	**Management of R&D and Innovation**	
4.1	Importance of Research and Development (R&D), corporate research and product lifecycle, production costs and R&D, translation of R&D efforts to technology.	2
4.2	Innovation, types of innovation, difference between innovation and invention,	2
4.3	Framework for management of innovation, organizational characteristics that facilitate innovation,	1
4.4	Trademarks, copyrights, patents and their use in innovation	1

	management, remedy against infringement,	
4.5	The role of technology transfer in innovation and new product development, role of government in innovation, globalisation and innovations, technology and innovation management.	2
4.6	Case studies about management of R&D and innovation.	1
5	**Human Aspects in Technology Management**	
5.1	Integration of people and technology, factors to be considered in technology management, organisational factors and psychological factors	2
5.2	Organisational structure and technology, implications of technological change	2
5.3	Implementation of rationalization and automation in India, impact of technological change	1
5.4	Human resource management issues in R&D and innovation, technology assessment and environmental impact analysis	2

CODE	COURSE NAME	CATEGORY	L	T	P	CREDIT
MET476	CRYOGENIC ENGINEERING	PEC	2	1	0	3

Preamble: This course provides fundamental knowledge of types of cryogenic fluids, behavior of materials and properties at temperatures, liquefaction systems, cryogenic refrigeration, gas separation, purification, insulators, cryogenic storage, transfer and measuring instruments

Prerequisite: MET202-Engineering Thermodynamics, MET303-Thermal Engineering

Course Outcomes : After completion of the course the student will be able to

CO1	Explain the properties of cryogenic liquids and properties of material at cryogenic temperatures
CO2	Describe and analyze cryogenic liquefaction systems using first principles of thermodynamics
CO3	Describe and analyze cryogenics refrigeration using first principles of thermodynamics
CO4	Identify insulation system for cryogenic application and explain cryogenic storage vessels.
CO5	Understand gas separation and purification methods
CO6	Understand instrumentation for various measurements in cryogenic engineering.

Mapping of course outcomes with program outcomes

Total Marks	CIE Marks	ESE Marks	ESE Duration
150	50	100	3 hours

Continuous Internal Evaluation Pattern:

Attendance : 10 marks
Continuous Assessment Test (2 numbers) : 25 marks
Assignment/Quiz/Course project : 15 marks

End Semester Examination Pattern: There will be two parts; Part A and Part B. Part A contain 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 questions from each module of which student should answer any one. Each question can have maximum 2 sub-divisions and carry 14 marks.

Course Level Assessment Questions:

Course Outcome 1 (CO1):

1. Describe in detail the variation of mechanical properties of various materials at cryogenic temperatures
2. Explain the terms i) Transition temperature and ii) Critical current of superconductors.
3. Explain the application of cryogenics in space technology.

Course Outcome 2 (CO2):

1. Explain the production of low temperatures using Joule-Thomson effect.
2. How the cryo coolers are classified? Explain the working of strilling cycle cryo cooler.
3. Explain about the working of a precooled Linde-Hampson system with suitable diagram for neon and hydrogen.

Course Outcome 3 (CO3):

1. Explain the working of Vuilleumier refrigerator with neat sketch.
2. Explain briefly the importance of refrigerator effectiveness.
3. Explain refrigerators using solids as working media.

Course Outcome 4 (CO4):

1. Explain about the basic design parameters of cryogenic fluid storage vessels.
2. Explain the different types and use of insulations in cryogenic applications.
3. Explain about the cryogenic fluid transfer system.

Course Outcome 5 (CO5):

1. Explain the pressure measurement system used in cryogenic applications.
2. Explain the working principle of different types of cryogenic liquid level indicators.
3. Explain different temperature measuring techniques used in cryogenic applications.

Model Question Paper

APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY

VIII SEMESTER B.TECH DEGREE EXAMINATION

MET476: CRYOGENIC ENGINEERING

Maximum: 100 Marks **Duration: 3 hours**

PART A

Answer all questions, each question carries 3 marks

1. Explain the historical development of cryogenics?
2. Distinguish between Ortho Hydrogen and Para Hydrogen.
3. Explain Meissner effect?
4. Explain Joule Thomson coefficient.
5. What are the performance parameters to be considered in gas liquefaction systems?
6. Define FOM for the refrigerator.
7. What is vapour shielding in cryogenic vessels?
8. What are super insulations?
9. Write a short note on hydrostatic liquid level gauge.
10. List few heat exchangers used in cryogenic systems.

(10 X 3 = 30 marks)

PART B

Answer one full question from each module

Module 1

11. a) What is cryogenics? Mention the few areas involving cryogenic engineering (7 marks)

    b) Determine the thermal conductivity of air at 250 K and 101.3 kPa if the mean free path of air at this condition is 49 nm, the gas constant for air is 287 J/kg K, the specific heat ratio is 1.4 and the specific heat at constant volume is 716.5 J/kg K. (7 marks)

12. a) With sketches, explain the different critical components present in gas liquefaction systems. (7 marks)

b) With the help of a T-s diagram explain working of a Simon Helium liquefier. (7 marks)

Module 2

13. a) Compare Claude Liquefaction system and Linde Hampson Liquefaction systems. (4 marks)

b) Explain the Joule Thomson effect. Show the inversion curve of a real gas on a T-p diagram.
Prove that an ideal gas will not experience a temperature change upon isenthalpic expansion. (10 marks)

14. a) With sketches, explain the different critical components present in gas liquefaction systems. (7 marks)

b) With the help of a T-s diagram explain working of a Simon Helium liquefier. (7 marks)

Module 3

15. a) Explain the working of a dilution refrigerator with neat schematic. (7 marks)

b) With the help of schematic and T-S diagram, explain Philips Refrigerator. Also explain briefly the importance of refrigerator effectiveness. (7 marks)

16. a) What are the gas purification methods? With sketches, explain adsorption purifier along with refrigerator purifier. (7 marks)

b) With sketches, explain Linde single column gas separation system. (7 marks)

Module 4

17. a) With sketches, explain the cryogenic fluid storage vessels. (7 marks)

b) Write about vacuum insulation and opacified powder insulation used in cryogenics. (7 marks)

18. a) Explain about cryogenic fluid transfer systems. (7 marks)

b) With Sketch, explain the functions of different components in a Dewar vessel. (7 marks)

Module 5

19. a) Explain the working of a turbine flow meter. (7 marks)

b) Write short notes on the various heat exchanger configurations used in cryogenic systems. (7 marks)

20. a) Explain the different temperature measurement techniques used in cryogenic application (7 marks)

b) Explain different safety devices used in cryogenic liquid storage systems. (7 marks)

Syllabus

Module 1

Introduction to cryogenic engineering, Historical background - Major events in the development of cryogenic engineering, Low Temperature properties of Engineering Materials - Mechanical properties- Thermal properties- Electric and magnetic properties, Cryogenic fluids and their properties.

Applications of cryogenics: Applications in space, food processing, super conductivity, electrical power, biology, medicine, electronics and cutting tool industry.

Module 2

Liquefaction systems – System performance parameters, ideal liquefaction system, Joule-Thomson expansion, Adiabatic expansion, Liquefaction systems for gases other than Neon. Hydrogen and Helium. Simple Linde - Hampson system, Claude & Cascaded System.

Liquefaction systems for Neon. Hydrogen and Helium – LN_2 precooled Linde Hampson and Claude systems, Ortho to Para conversion arrangement in hydrogen liquefaction system, Simon Helium liquefaction system, Collins Helium liquefaction system. Critical components of Liquefaction systems – critical components and their effect on system performance.

Module 3

Cryogenic Refrigeration systems: Ideal isothermal and isobaric refrigeration systems- Refrigeration using liquids as refrigerant- Linde-Hampson refrigerator, Claude refrigerator. Refrigeration using gases as refrigerant- Stirling cycle cryocoolers, Philips refrigerator, Effect of regenerator effectiveness on performance of Philips refrigerator, Gifford McMahon refrigerators. Refrigerators using solids as working media-Magnetic refrigerators – Thermodynamics of magnetic refrigerators, dilution refrigerators.

Module 4

Gas separation and purification: - Thermodynamic ideal separation system, mixture characteristics, principle of gas separation, separation of air, hydrogen and helium, gas purification methods

Cryogenic fluid storage and transfer systems:, Cryogenic fluid storage vessel, Thermal insulation and their performance at cryogenic temperatures, Super Insulations, Vacuum insulation, Powder insulation, Cryogenic fluid transfer systems, Cryo pumping.

Module 5

Cryogenic instrumentation, Pressure measurement – Mc Leod gauge, Pirani gauge and Penning gauge, Flow measurement – Orifice meter, Venturi meter and Turbine flow meter. Liquid level gauges- hydrostatic, resistance gauge,, capacitance gauge anf

thermodynamic gauge, Temperature measurements- ITS-90, Thermocouple, RTD, magnetic thermometers and vapor pressure thermometers, Types of heat exchangers used in cryogenic systems, Safety in cryogenic fluid handling, storage and use.

Text Books:

1. Randal F. Barron, Cryogenic systems, McGraw Hill, 1986
2. M Mukhopadhyay, Fundamentals of Cryogenic Engineering, PHI Learning , 2010
3. K. D. Timmerhaus and T. M. Flynn, Cryogenic Process Engineering, Springer, 2013
4. S.S Thipse, Cryogenics, Narrosa, 2012

Reference Books:

1. A. R. Jha, Cryogenic Technology and applications, Elsevier Science, 2011
2. R. B. Scott, Cryogenic Engineering, Van Nostrand Co., 1989
3. M. D. Atrey (Ed.) Cryocoolers: Theory and Applications, 1st ed., International Cryogenics Monograph Series, Springer International Publishing, 2020

Course Contents and Lecture Schedule

No.	Topic	No. of Lectures
1	**Module 1**	
1.1	Introduction to Cryogenic Systems, Historical development, Low Temperature properties of Engineering Materials, Mechanical properties- Thermal properties- Electric and magnetic properties –Cryogenic fluids and their properties.	**4**
1.21.2	Applications of Cryogenics: Applications in space, Food Processing, super conductivity, Electrical Power, Biology, Medicine, Electronics and Cutting Tool Industry. Low temperature properties of engineering materials	**3**
2	**Module 2**	
2.1	Liquefaction systems ideal system, Joule Thomson expansion, Adiabatic expansion, Linde - Hampson Cycle, Claude & Cascaded System, Magnetic Cooling, Stirling Cycle Cryo Coolers.	**4**
1.22.2	Gas liquefaction systems: Introduction-Production of low temperatures-General Liquefaction systems-Liquefaction systems for Neon. Hydrogen and Helium – Critical components of Liquefaction systems	**4**
3	**Module 3**	
3.1	Cryogenic Refrigeration systems: Ideal Refrigeration systems- Refrigeration using liquids and gases as refrigerant- Refrigerators using solids as working media	**4**

1.23.2	Gas separation and purification: Thermodynamic ideal separation system, mixture characteristics, principle of gas separation, separation of air, hydrogen and helium, gas purification methods	**3**
4	**Module 4**	
4.1	Cryogenic fluid storage and transfer systems: Cryogenic Storage vessels and Transportation, Thermal insulation and their performance at cryogenic temperatures, Super Insulations, Vacuum insulation, Powder insulation, Cryogenic fluid transfer systems, Cryo pumping.	**7**
5	**Module 5**	
5.1	Cryogenic instrumentation, Pressure flow-level and temperature measurements, Types of heat exchangers used in cryogenic systems, Safety in cryogenic fluid handling, storage and use.	**7**

CODE	COURSE NAME	CATEGORY	L	T	P	CREDIT
MET418	RELIABILITY ENGINEERING	PEC	2	1	0	3

Preamble:

1. To induce in students an attitude towards reliability which will ensure that they lookout for steps to avoid failures to achieve success in all assignments they take up. That will help them become true engineers.

2. To generate in students an awareness of the importance of statistical concepts, and to make them realise that engineering is also largely statistics based.

Prerequisite: MAT 202 Probability, Statistics and Numerical Methods

Course Outcomes: After the completion of the course the student will be able to:

CO 1	Explain the basic concepts of reliability, various models of reliability and failure concepts.
CO 2	Analyse mathematical models of reliability and failure modes.
CO 3	Perform the design process of reliability.
CO 4	Explain the relation between reliability, availability and maintainability.
CO 5	Explain economic aspects of reliability and Perform reliability managementeffectively.

Mapping of course outcomes with program outcomes

End Semester Examination Pattern: There will be two parts; Part A and Part B. Part A contain 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 questions from each module of which student should answer any one. Each question can have maximum 2 sub-divisions and carry 14 marks.

Course Level Assessment Questions

Course Outcome 1 (CO1):

1. Define the term reliability? Explain the reliability function.
2. RelateReliability and Quality.
3. What is component failure and system failure?
4. Explain Weibull distribution and Normal distribution.

Course Outcome 2 (CO2)

1. Describe Weakest-link Technique.

2. Explain various mathematical models of reliability.
3. Explain Redundancy optimization.
4. Explain load sharing systems and standby system.

Course Outcome 3 (CO3):

1. How quality and reliability is related?
2. Explain System safety and Fault Tree Analysis.
3. What is Tie-set and Cut-set methods?
4. Explain the use of Boolean Algebra in reliability analysis.

Course Outcome 4 (CO4):

1. Describe repair time distribution in maintainability.
2. What is relationship between reliability and availability?
3. What is achieved availability and operational availability?
4. Explain Markovian models?

Course Outcome 5 (CO5):

1. What are the costs considered in reliability engineering?
2. Describe reliability achievement cost model?
3. Explain reliability utility cost model.
4. What are the functions of reliability management groups?

Model Question Paper

APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY
VIII SEMESTER BTECH DEGREE EXAMINATION
MET418: RELIABILITY ENGINEERING

Maximum:100 Marks **Duration:3 hours**

PART A

Answer all questions, each question carries 3 marks

1. Define the term reliability? Explain the reliability function.

2. Explain the term MTTF. Also derive it with respect to reliability and CDF.

3. State k-out-of-m system redundancy?

4. What is mixed redundancy?

5. Explain the static model for constant strength and load?

6. What is a tie and cut set?

7. Explain inherent availability?

8. What is MTBF?

9. Discuss the economic issues of reliability.

10. Draw and explain reliability-cost curves of a product.

PART B

Answer one full question from each module

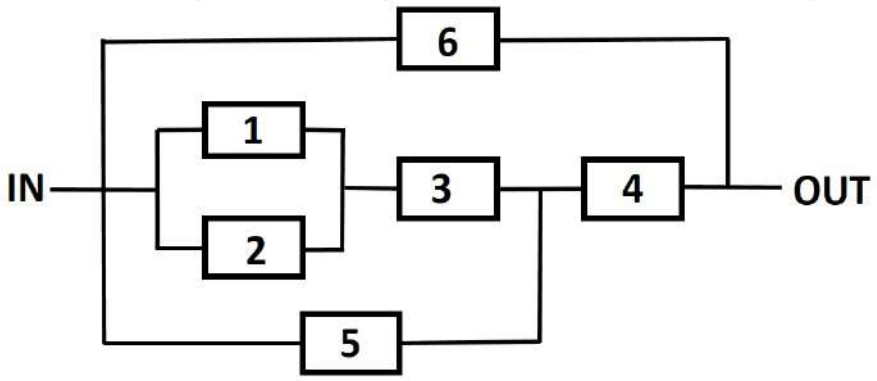
MODULE 1

11. a) Draw and explain Bath tub Curve. (4)
b) The time to wear for a cutting tool is distributed normally with a mean of 2.8 hour and standard deviation of 0.6 hour. Find

I.The probability that the tool will wear out in 1.5 hours
II.Find out the reliability for 1.5 hours
III.How often the cutting edge of the tool must be replaced in order to keep the failure less than 10 percentage? (10)

12.a)Find out the system reliability for a serial and parallel configuration with 2 components. (7)

b)Find out the reliability of the following system with 1,2,3,4,5 and 6 as 0.85,0.90, 0.95,0.90,0.80 and 0.85 respectively. Find out the tie sets and cut sets (7)



MODULE 2

13. a) Compare unit vs Component Redundancy with sketches (6)

b) Given a budget of Rs 700 and the following data on three components that must operate in series. Determine, using marginal analysis, the optimum number of redundant units. Compute the achieved reliability. (8)

Components	Reliability	Unit Cost (In rupees)
1	0.80	200
2	0.90	100
3	0.95	75

14. a) Find out the reliability using markov analysis for load sharing units? (6)

b) A manufacturing company operates two production lines when both lines are operating, the production rate on each line is 500 units per hour. At this production rate the failure rate of line 1 is 3 failures per 8-hr day (CFR) and the failure rate of line 2 is 2 failures per 8-hr day. When one line fails, the production rate of the second line must be increased in order to make production quotas. At the increased rate of 800 units per hour, the failure rate of line 1 is 6 per 8 hr day and the failure rate of line is 3 per 8-hr day. Find the reliability and the MTTF and the reliability of the production system over a 1 hr and over an 8 hr production run. (8)

MODULE 3

15. a) With a block diagram explain the reliability design process. (5)

b) A system consists of three components in series having the following parameters. The reliability goal is 0.90 for the system. Do the reliability allocation. (9)

Components	Reliability	Unit Cost (In rupees)
1	0.85	25
2	0.80	20
3	0.90	40

16.a) Explain the steps in FMECA. (6)

b) In the context of fault tree analysis, explain the meaning of each of the following: an 'AND' gate, an 'OR' gate, a priority 'AND' gate, 'top' event, a 'basic' event, an 'undeveloped' event. In each of the case, sketch the conversional symbol used and give a practical example. (8)

MODULE 4

17. a) Compute markov analysis of availability model for two component stand by system. (6)

b) A generator system consist of primary and a standby unit. The primary fails at a constant rate of 2 per month, and the stand by system fails only when online at a constant rate of 4 per month. Repair can begin only when both units have failed. Both units are repaired at the same time with an MTTR of 20 days. Derive the steady state equations for the state probabilities and solve for the system availability. (8)

18. a) What is inspection and repair availability model? Explain a case for it. (6)

b) Determine the upper bound for each of the following aircraft subsystems MTTRs if a system availability goal of 0.95 is desired. Assume the repair restores the subsystem to as good as new and each system has the same availability. (8)

Subsystem	Time Between failures	Parameters
Propulsion	Weibull	θ =1000, β=1.7
Avionics	Exponential	λ=0.003
Structures	Weibull	θ =2000, β=2.1
Electrical	Weibull	θ =870, β=1.8
Environmental	Exponential	λ=0.001

MODULE 5

19. Explain reliability achievement cost model (7)

20. Explain Reliability management by objectives (7)

SYLLABUS

Module – I

Reliability concepts: Definition of reliability, Reliability vs. Quality, Reliability function, MTTF, hazard rate function, bathtub curve, derivation of the reliability function, Failure and Failure modes, Causes of Failures and Unreliability. Reliability Models: constant failure rate model ,time dependent failure models. Weibull distribution, Normal distribution, log normal distribution. Serial configuration, parallel configuration, combined series parallel systems, K-out-of-m systems.

Module – II

Redundancy Techniques in System design: Component vs Unit redundancy, Weakest-link Technique, Mixed redundancy, Standby redundancy, Redundancy optimization, Double failures and Redundancy. Markov analysis, load sharing systems, standby system, degraded systems, three state devices, covariate models.

Module – III

Reliability design process, system effectiveness, economic analysis and life cycle cost, Reliability allocation, optimal allocations, ARINC, AGREE methods. System safety and Fault Tree Analysis, Tie-set and Cut-set methods, Use of Boolean Algebra in reliability analysis.

Module – IV

Maintainability and Availability: Definitions and basic concepts, Relationship between reliability, availability and maintainability, Inherent availability, Achieved availability, Operational availability, Repairable systems, Markovian models. Reliability Allocation: for series system.

Module – V

Economics of Reliability: Economic issues, Manufacturers cost, Customers cost, reliability achievement cost models, reliability utility cost models, depreciation cost models, availability cost model for parallel systems. Reliability management, Reliability management by objectives

Text books:

1. Balagurusamy E., *Reliability Engineering*, Tata McGraw Hill.
2. Srinath L. S., *Reliability Engineering,* East West Press.
3. Charles E. Ebeling, Reliability and Maintainability Engineering, Tata McGraw Hill.
4. Patrick D. T. O'Connor, *Practical Reliability Engineering,* John

Reference Books:

1. E.E. Lewis, Introduction to Reliability Engineering, JW.
2. NVR Naidu, et al, Total Quality Management, New Age International Publishers.
3. J.M. Juran and Frank M. Gryna, Quality Planning and Analysis, Tata McGraw Hill.

Course Contents and Lecture Schedule:

No	Topic	No. of Lectures
1.1	Definition of reliability, Reliability vs. Quality, Reliability function, MTTF,hazard rate function, bathtub curve, derivation of the reliability function	2
1.2	Failure and Failure modes, Causes of Failures and Unreliability	2
1.3	Reliability Models: constant failure rate model, time dependent failure models.	1
1.4	Weibull distribution, Normal distribution, lognormal distribution.	1
1.5	Serial configuration, parallel configuration, combined series parallel systems, K-out-of-m systems.	1
2.1	Redundancy Techniques in System design: Component vs Unit redundancy, Weakest-link Technique,	3
2.2	Mixed redundancy, Standby redundancy, Redundancy optimization Double failures and Redundancy.	3
2.3	Markov analysis, load sharing systems, standby system	1
3.1	Reliability design process, system effectiveness, economic analysis and life cycle cost	2
3.2	Reliability allocation, optimal allocations	1
3.3	ARINC, AGREE methods	1
3.4	System safety and Fault Tree Analysis, Tie-set and Cut-set methods	2
3.5	Use of Boolean Algebra in reliability analysis.	1
4.1	Maintainability and Availability: Definitions and basic concepts, Relationship between reliability, availability and maintainability	3

4.2	Inherent availability, Achieved availability, Operational availability	2
4.3	Operational availability, Repairable systems, Markovian models	2
4.4	Reliability Allocation: for series system.	1
5.1	Economics of Reliability: Economic issues, Manufacturers cost, Customers cost, reliability achievement cost models	3
5.2	reliability utility cost models, depreciation cost models, availability cost model for parallel systems	3
5.3	Reliability management, Reliability management by objectives	1

CODE	COURSE NAME	CATEGORY	L	T	P	CREDIT
MET428	PROJECT PLANNING AND MANAGEMENT	PEC	2	1	0	3

Preamble: This course involves the application of principles studied in Project planning, Analysis, Selection Implementation of different project which has social cost, multiple projects, project review, financial analysis. This course also covers the financials of projects, improving and evaluating review the performance of the project. This course also helps to understand the risk analysis and capital budgeting and working capital management.

Prerequisite: Nil

Course Outcomes: After the completion of the course the student will be able to

CO 1	Overview about the Capital investment, Strategy, Generation & Screening of Project Idea, Demand analysis.
CO 2	Discuss the Technical Analysis, Product Mix, Plant Capacity, Cost of project and means finance. Cash flow, Projected Balance sheet, Trial balance, Profit and Loss account, Time value of money.
CO 3	Discus about the investment analysis, Cash flow of the project, Cost of capital, Project Risk, Multiple projects, Social Cost Benefit Analysis, Capital Budgeting.
CO 4	Rate return of projects, Project financing, Financing infrastructure projects, Financial Institutions, Working capital management. Term loan appraisal.
CO 5	Discuss the principles of Project Management, PERT, CPM, Project overview, Post audit, Critical path.

Mapping of course outcomes with program outcomes

Continuous Internal Evaluation Pattern:

Attendance : 10 marks
Continuous Assessment Test (2 numbers) : 25 marks
Assignment/Quiz/Course project : 15 marks

End Semester Examination Pattern: There will be two parts; Part A and Part B. Part A contain 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 questions from each module of which student should answer any one. Each question can have maximum 2 sub-divisions and carry 14 marks.

Course Level Assessment Questions

Course Outcome 1 (CO1):

1. Types of capital investments and phases of capital budgeting. The detailed explanations of project analysis and key issues in major investment decisions.
2. Explain the grand strategy and diversification debates and SPACE.
3. What is positive NPV (net present value), explain tools for identifying investment opportunity.

Course Outcome 2 (CO2):

1. What is the industry specific source of secondary information and characteristics of market? Demand forecasting and trend projection.
2. What are the sources of uncertainties in demand? Describes the aspects covered in market planning.
3. Explain Plant capacity, Product mix, Location and Site? Describe the important charts and layout drawings.
4. Discuss the importance of Balance sheet and cash flow statement. Explain the means of finance.

Course Outcome 3(CO3):

1. What is an annuity? State the formula for the present value of an annuity?
2. What is NPV, IRR, Payback period? Explain the properties of the NPV rule?
3. Explain the principles of cash flow estimation? explain WACC and technics for risk analysis.

Course Outcome 4 (CO4):

1. Explain the portfolio theory and capital budgeting. Explain why the firms set a hurdle rate higher than the WACC.
2. How the economic life of a project determined? What is NPV and how is it calculate ?
3. Explain the public sector investment decision in India? Explain working capital management and project financing.
4. Explain capital structure? Explain key factors in determining the Debt- Equity ratio?

Course Outcome 5 (CO5):

1. Describe the PPP and its advantage and disadvantage.
2. Describe the tools of project planning and explain how the performance is analysed?
3. What are the pre-requisites for successful project implementation, explain?
4. What is essence of Project Management? Describe the notion of hierarchy of plans?
5. Explain network techniques and time estimations? Explain PERT and CPM.

Model Question Paper

APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY

VIII SEMESTER BTECH DEGREE EXAMINATION

MET428 : PROJECT PLANNING & MANAGEMENT

Maximum: 100 Marks Duration:3 hours

PART A

Answer all questions, each question carries 3 marks

1. Explain Types of Capital Investments.
2. Explain the preliminary screening of project ideas.
3. What are the uncertainties in demand forecasting?
4. What are the factors influenced by the selection of Technology?
5. Explain Cash flow and cost of capital of a project?
6. Explain the procedure of Morse test.
7. Discuss about benefit cost ratio and IRR.
8. Explain sources, Measures and Perspectives on Risk?
9. Discus the key factors in determining the Debt-Equity Ratio.
10. Define Network techniques for project management. Explain PERT and CPM.

(10×3=30 Marks)

PART B

Answer one full question from each module

MODULE 1

11. a) Explain the phases of Capital budgeting and Common weakness of Capital Budgeting? (8 marks)

    b) Derive the components of Marketing plan and key project inter-linkage? (6 marks)

12. a) Explain strategic planning and capital budgeting? Discus the various strategies for growth strategy and contraction strategies. (8 marks)

    b) Discus the source of positive NPV and qualities and traits required for a successful entrepreneur. (6 marks)

MODULE 2

13. a) What is information required for preparing the project implementation schedule. Discus the importance of considering alternative ways of transferring an idea in to a concrete project. (6 marks)

    b) Describe Cost project, Cost of Product and Means of finance ? (8 marks)

14. a) Explain cost of project, means of finance. Discus contribution of a projected Balance sheet in a project? (6 marks)

    b) Explain Cash flow Statement, Balance sheet, Trail Balance and Profit and Loss account and Time value of Money? (8 marks)

MODULE 3

15. a) What are the Investment Criteria? Describe NPV and IRR and properties of the NPV rule. (8 marks)

    b) Discuss the elements of Cash flow stream and basic principles of Cash flow estimation. (6 marks)

16. a) Describe the Sources, Measures and Perspectives on Risk. What are the techniques of Risk analysis and ways and means of mitigating Risk. (8 Marks)

    b) Explain Social cost and benefit differ from monetary costs and benefits. (4 marks)

MODULE 4

17. a) Explain the Inventory management and Economic order quantity? (6 marks)

    b) Discus the PPP and its relevance in India. Explain how financial institutions appraise a project.? (8 marks)

18. a) Explain the Working Capital Management? Discus components of Credit policy and Impact of credit policy. (8 marks)

    b) Discus the Cash flow process and its relevance. (6 marks)

MODULE 5

19. a) Explain PERT and CPM? Discus the rules for the construction of Network Diagram? (6 marks)

b) Why post audit be done? What is the advantage of conducting performance review? (4 marks)

c) Explain the difference between Economic rate of return and Book return on Investment? (4 marks)

20. A project consisting of 12 activities and their time activities are shown

Activity.	Time (in weeks)		
	to	tm	tp
1-2	4	6	9
1-3	3	8	12
1-4	5	5	8
1-7	2	4	6
2-4	6	10	18
2-6	3	4	7
2-7	5	10	16
3-4	3	6	11
4-5	2	4	6
5-6	1	3	7
3-7	2	4	8
6-7	1	2	6

a) Draw the Network diagram. (3 marks)

b) Determine the Critical path. (3 marks)

c) Calculate event slacks and activity floats. (3 marks)

d) Find the standard Deviation of the critical path duration? (3 marks)

e) Compute the probability of completing the project in 30 weeks. (2 marks)

Syllabus

Module 1

Capital Investment – importance and differences, Phases of Capital Budgeting, Decision making, Project analysis- Risks, Discounted cash flow (DCF), Financing, Earning per share (EPS), weakness in capital budgeting, Formulation of strategies, grand strategy, Diversification-risk reduction- value creation, portfolio strategy, business level strategies, screening of project idea, tools for identifying investment analysis, preliminary screening, positive net present value, demand forecasting, marketing plan, marketing survey.Demand analysis.

Module 2

Manufacturing process/ technology, raw materials, product mix, plant capacity, location and site, plant and machinery, project chart and layout, project implementation, need for alternatives, project inter linkage, cost of project, means of finance, profitability projection, basic acceptation and principles of cash flow statement, projected balance sheet, trial balance, profit and loss account, time value of money.

Module 3

Various investment criteria, net present value (NPV), benefit cost ratio (BCR), internal rate of return (IRR), pay back period, accounting rate of return, project cash flow – basic principle, biases in cash flow estimation, difference between company cost of capital and project cost of capital, project risk analysis, sources,-measures and perspective risk, break even analysis, scenario analysis, managing risk, social cost benefit analysis, UNIDO approach, features of capital budgeting, NPV-IRR comparison, multiple project and constrains.

Module 4

Project financing, capital structure, key factors in determining the Debt-Equity ratio, sources of finances, equity capital, preference capital, term loan, working capital, project financing structure, financial closure, financial institutions, information and documents for term loan appraisal, project appraisal, credit risk rating, private public partnership (PPP)managing risk in private infrastructure project, working capital management, working capital policy, estimation of working capital, inventory management, purchase, optimum level of inventory, economic order quantity, just in time (JIT). Cash Management, Cash flow process. Term loan appraisal, PPP, Inventory Management, Receivable Management, Cash Management.

Module 5

Project management, principle- forms of project organisation, project planning, project control, authority, orientation , motivation, group function, pre-requisite for successful project implementation, accounts receivable, impact of credit policy, components of credit policy, cash management, motives for holding cash, cash flow process and its relevance, principles of cash management, collection and disbursement management, cash forecasting, network techniques in project management, development of project network, rules for network construction, time estimation, determination of critical path, schedule when resources are limited, Network Technologies, PERT model, CPM model, network cost system, project review, post audit, abandonment analysis, overcome resistance, managing divestments, Project review.

CODE	COURSE NAME	CATEGORY	L	T	P	CREDIT
MET438	FRACTURE MECHANICS	PEC	2	1	0	3

Preamble: Fracture mechanics is a relatively new engineering discipline concerned with the study of the propagation of cracks, fracture failure and methods to arrest the crack in materials. This subject is based on the implicit assumption that there exists a crack in a material. There are many machine components, plants and equipment that fail through fatigue and fracture. Knowledge of fracture mechanics can assist the machine designer to safeguard structures against catastrophic fracture. Fracture mechanics is applied extensively to many engineering fields like nuclear power plant, aircraft, spaceship, etc. This undergraduate course offers an introduction to the basic concepts of fracture mechanics.

Prerequisite: MET201 Mechanics of solids

Course Outcomes: After the completion of the course the student will be able to

CO 1	Explain the basic concepts of conventional design methodologies, failure mechanics and fracture
CO 2	Apply the conservation of energy law for the mathematical formulation of energy release rate
CO 3	Solve the problems related to stresses and displacement fields of linear elastic materials
CO 4	Apply the principal stresses, various theory of yield criteria and failure theories to find the plastic zone shape, size and effective crack length
CO 5	Analyze the elastic-plastic behaviour near crack tip by solving path independent integral
CO 6	Explain the environmentally assisted cracking and corrosion fatigue

Continuous Internal Evaluation Pattern:

Attendance : 10 marks
Continuous Assessment Test (2 numbers) : 25 marks
Assignment/Quiz/Course project : 15 marks

End Semester Examination Pattern: There will be two parts; Part A and Part B. Part A contain 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 questions from each module of which student should answer any one. Each question can have maximum 2 sub-divisions and carry 14 marks.

Course Level Assessment Questions

Course Outcome 1 (CO1):

1. Describe the historical perspective of fracture and failure studies.
2. Explain the different modes of fracture failure.
3. Explain damage tolerance approach in design.

Course Outcome 2 (CO2)

1. Explain the concept of crank propagation based on energy release rate and surface energy.
2. Explain change in compliance approach and change in strain energy approach in crack propagation study.
3. Explain the difference between stable and unstable crack growth using R curve.

Course Outcome 3(CO3):

1. Explain the advantages of Stress Intensity factor over Energy release rate in fracture studies.
2. Solve simple problems using stress Intensity factor equations for mode 1, mode 2 and mode 3 type fracture failure.
3. Derive the stress Intensity factor equations for mode 1, mode 2 and mode 3 type fracture failure.

Course Outcome 4 (CO4):

1. Explain the plastic zone shape for plane stress and plane strain using a neat figure
2. Explain Irwin's correction for determining plastic zone size.
3. Explain Dugdale approach to find the size of the crack tip plastic zone.

Course Outcome 5 (CO5):

1. Explain the conditions for rapid crack propagation and crack arrest
2. Explain Paris Law and crack closure.
3. Explain the different causes of corrosion

Model Question Paper

Maximum: 100 Marks **Duration: 3 hours**

MET438 FRACTURE MECHANICS

Answer all questions. Each question carries 3 marks

(10 X 3 = 30 Marks)

1. List any six causes of mechanical failure.
2. Differentiate between brittle and ductile fracture.
3. Define Griffith's theory.
4. Explain Surface energy of a solid.
5. Explain Stress Intensity Factor.
6. What is a singularity? What kind of singularity describes a stress field near the vicinity of a crack tip in LEFM?
7. In comparison to a plane strain case, a plane stress loading gives much larger plastic zone for the same SIF? Why?
8. Explain the term 'effective crack length'.
9. Explain the effect of an overload pulse inside a constant amplitude fatigue load on crack propagation.
10. Why does the environment-assisted cracking occur mostly through inter-granular growth?

PART B

Answer one question from each module

MODULE 1

11. Explain with neat sketch the different modes of fracture failure.

OR

12. Discuss the historic overview of Fracture Mechanics.

MODULE 2

13. Derive the equation to find the energy release rate, G of a double cantilever beam (DCB), subjected to (i) constant load P and (ii) constant displacement.

OR

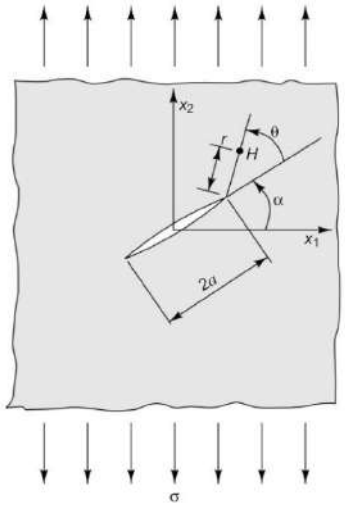
14. Explain the conditions for stable and unstable crack growth in a ductile material using R curve

MODULE 3

15. For a centre crack in an infinite plate loaded in Mode II, determine stress components and displacement components (plane stress) near the vicinity of a crack tip in terms of K_{II}.

OR

16. In a large plate, a crack of length 2a is inclined with an angle a with x_1-axis as shown in figure. The plate is loaded in x_2 direction with $\sigma_{22} = \sigma$. (i) Find the stress intensity factors. (ii) For σ = 80 MPa, 2a = 20 mm and $\alpha = 30°$, determine K_I and K_{II}.



MODULE 4

17. Explain with neat sketch, the plastic zone shape for plane stress condition.

OR

18. A large plate of 5 mm thickness, made of medium carbon steel (σ_{ys} = 350 MPa) with a through-the-thickness centre-crack of 2a = 40 mm length, is subjected to a stress of 150 MPa. For Mode I loading, determine the effective crack length using Irwin's correction.

MODULE 5

19. What do you mean by crack closure? What are the factors affecting crack closure? Explain its effects on crack propagation.

OR

20. Explain the major factors influencing environment-assisted fracture.

Syllabus

Module 1

Introduction to fracture mechanics: - Review on conventional design methodologies, Brittle and ductile fracture, Modes of fracture failure, Damage tolerance, Spectacular failures, Lessons from spectacular failures, fracture mechanics approach to design, damage tolerance approach to design (review).

Module 2

Griffith's Dilemma – surface energy- Griffith analysis – Energy Release Rate – Double cantilever beam (DCB) with constant load, DCB with fixed grip, Energy release rate of DCB specimen.

Anelastic deformation at crack-tip, Crack resistance, stable and unstable crack growth, R-curve, Critical energy release rate (concepts only).

Module 3

Linear Elastic Fracture Mechanics (LEFM): - stress and displacement fields in isotropic elastic materials - Stress intensity factor - Field equations - Airy's Stress Function - Biharmonic Equation, Westergaard's Approach (concepts only, no derivations, final result).

Module 4

Anelastic Plastic Zone Shape and Size: - plastic zone shape for plane stress - plastic zone shape for plane strain. Effective Crack Length: - approximate approach - Irwin's correction – Dugdale approach.

Module 5

J - Integral: Path independence of J - integral (concepts only), stress strain relation, Engineer approach to J – integral, Ramberg - Osgood relation (simple problem only). Fatigue Crack Propagation: - Paris Law – crack closure. Environmentally Assisted Cracking: - types of corrosion – cracking mechanism. Corrosion Fatigue (concepts only).

CODE	COURSE NAME	CATEGORY	L	T	P	CREDIT
MET448	GAS TURBINES AND JET PROPULSION	PEC	2	1	0	3

Preamble: The objectives of the course are:

- To know about the concepts of compressible fluid flow
- To know about the operation of gas turbines and compressors.
- To know about various types of combustion systems
- To identify factors affecting efficiency and performance of turbomachines
- To know about the basics of propulsion systems

Prerequisite: MET203 Mechanics of fluid, MET202 Engineering Thermodynamic, MET 302 Heat and Mass Transfer

Course Outcomes: After the completion of the course the student will be able to

CO 1	Explain the basic fundamentals of the various gas turbine cycles
CO 2	Discuss various laws pertaining to gas turbines and jet propulsion
CO 3	Identify, formulate and solve problems related to gas turbines and jet propulsion
CO 4	Specify, interpret data, and make a judgement about the best possible solution
CO 5	Aspire for developing career with specialization in areas of thermo-fluid drives, recognize the need to learn, to engage and to adapt in a world of constantly changing environment.
CO 6	Illustrate different techniques used in rocket propulsion

Mapping of course outcomes with program outcomes

Students should answer all questions. Part B contains 2 questions from each module of which student should answer any one. Each question can have maximum 2 sub-divisions and carry 14 marks.

Course Level Assessment Questions

Course Outcome 1 (CO1):

1. Represent Brayton cycle in PV and TS coordinates.
2. Define closed cycle and semi closed cycle gas turbines

Course Outcome 2 (CO2)

1.Discuss laws pertaining to Gas Turbines

2. Discuss laws pertaining to Jet Propulsion

Course Outcome 3 (CO3):

1. Discuss problems related to Gas Turbines
2. Discuss problems related to Jet Propulsion

Course Outcome 4 (CO4):

1. Discuss about the solutions related to Gas Turbine problems
2. Discuss about the solutions related to Jet Propulsion problems

Course Outcome 5 (CO5):

1. Discuss about the applications in the field

Course Outcome 6 (CO6):

1. Discuss about different techniques in rocket propulsion

Model Question Paper

APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY

GAS TURBINES AND JET PROPULSION -MET448

Maximum: 100 Marks **Duration: 3 hours**

PART A

Answer all questions. Each question carries 3 marks

(10 X 3 = 30 Marks)

1. What are the applications of gas turbines?
2. List the advantages of closed cycle gas turbine system over open cycle system.
3. What are the different methods used to improve the efficiency of gas turbine
4. Explain the significance of intercooler. What is meant by perfect intercooling?
5. Why are propeller engines not commonly used nowadays in aircrafts?
6. State the difference between air breathing and non-air breathing propulsion
7. Define thrust power and propulsive power.
8. What is propellant? How are propellants classified?

9. Explain about free radical propulsion.

10. What is meant by thrust and its limiting factors?

PART B

Answer one question from each module

MODULE 1

11. An air nozzle is to be designed for an exit Mach number of 2. conditions of the air available in the reservoir are 700 kPa, 533 K. Estimate i) pressure ii) temperature iii) velocity of flow iv) area, at throat and exit of the nozzle. Mass flow rate through the nozzle is 10000 kg/hr.

14 marks

12..Derive the conservation of mass equation for compressible flow through control volume approach. 14 marks

MODULE II

13. Explain constant pressure and constant volume gas turbines with diagrams

14 marks

14. Explain intercooling, reheating and their combinations 14 marks

MODULE III

15. Explain the operation of single stage reciprocating compressor 14 marks

16. Explain centrifugal compressors and axial flow compressors 14 marks

MODULE IV

17. Explain factors affecting combustion chamber design 14 marks

18.Explain gas turbine combustion chamber performance 14 marks

MODULE V

19. Explain air breathing propulsion system 14 marks

20. Explain rocket propulsion system 14 marks

Note: Problems also can be asked from module 2 and 3. Each question can have maximum two sub divisions

Syllabus

Module 1- Compressible Flow: Wave propagation and sound velocity; Mach number and compressible flow regimes; basic equations for one-dimensional compressible flow, isentropic flow relations; area-velocity relation; normal shock waves, relation between upstream and downstream flow parameters.

Module 2- Gas Turbine Systems and Cycles: System of operation of gas turbines-constant volume and constant pressure gas turbines; thermodynamics of Brayton cycle; regeneration-inter-cooling, reheating and their combinations; closed cycle and semi-closed cycle gas turbines; Compare Gas turbines, I.C engines and steam turbines.

Module 3- Compressors: Classification-positive displacement and dynamic compressors, Operation of single stage reciprocating compressors; isothermal efficiency; volumetric efficiency; multi-stage compression. Centrifugal compressors; principle of operation; work done and pressure rise; diffuser; compressibility effects; non dimensional quantities for plotting compressor characteristics; compressor characteristics. Axial flow compressors; basic operation; elementary theory; factors effecting stage pressure ratio; degree of reaction; calculation of stage performance; Axial flow characteristics.

Module 4- Combustion Systems: Types, operational requirements; combustion process; factors affecting combustor design; combustion chamber performance; Gas turbine emissions.

Module 5- Air-breathing Propulsion Systems: Principle of jet propulsion; analysis and performance characteristics of turbojet, turboprop, ramjet and pulsejet; thrust power and propulsion efficiency. **Rocket Propulsion:** Operating principle; solid and liquid propellants, performance analysis-calculations for specific impulse and propulsive efficiency.

Text Books

1. Gas Turbine Theory – Saravanamuttoo, Cohen and Rogers, Pearson Education Asia

2. Gas Turbines – V. Ganesan, Tata McGraw Hill

MODULE	TOPICS	HOURS ALLOTED
1	**Compressible Flow**: Wave propagation and sound velocity; Mach number and compressible flow regimes; basic equations for one-dimensional compressible flow, isentropic flow relations; area-velocity relation; normal shock waves, relation between upstream and downstream flow parameters.	**4-1-0**
2	**Gas Turbine Systems and Cycles:** System of operation of gas turbines-constant volume and constant pressure gas turbines; thermodynamics of Brayton cycle; regeneration- inter-cooling, reheating and their combinations; closed cycle and semi-closed cycle gas turbines; gas turbine v/s I.C engines and steam turbines.	**4-2-0**
3	**Compressors:** Classification-positive displacement and dynamic compressors, Operation of single stage reciprocating compressors; isothermal efficiency; volumetric efficiency; multi-stage compression. Centrifugal compressors; principle of operation; work done and pressure rise; diffuser; compressibility effects; non dimensional quantities for plotting compressor characteristics; compressor characteristics. Axial flow compressors; basic operation; elementary theory; factors effecting stage pressure ratio; degree of reaction; calculation of stage performance; Axial flow characteristics.	**6-2-0**
4	**Combustion Systems:** Types, operational requirements; combustion process; factors affecting combustor design; combustion chamber performance; Gas turbine emissions.	**4-1-0**
5	**Air-breathing Propulsion Systems:** Principle of jet propulsion; analysis and performance characteristics of turbojet, turboprop, ramjet and pulsejet; thrust power and propulsion efficiency	**4-1-0**
	Rocket Propulsion: Operating principle; solid and liquid propellants, performance analysis-calculations for specific impulse and propulsive efficiency.	**5-1-0**

CODE	COURSE NAME	CATEGORY	L	T	P	CREDIT
MET458	ADVANCED ENERGY ENGINEERING	PEC	2	1	0	3

Preamble: This course provides basic ideas about various energy source and its environmental impacts.

Prerequisite : Nil

Course Outcomes : After completion of the course the student will be able to

CO1	Explain the concept of various types of power generation
CO2	Explain solar and wind power generation and its economics
CO3	Explain biomass energy sources and its economics
CO4	Explain various renewable energy sources
CO5	Explain environmental impacts of various energy generation

End Semester Examination Pattern: There will be two parts; Part A and Part B. Part A contain 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 questions from each module of which student should answer any one. Each question can have maximum 2 sub-divisions and carry 14 marks.

Course Level Assessment Questions:

Course Outcome 1 (CO1):

1. Discuss the renewable energy potential of India.
2. Explain briefly global energy resources.
3. Explain the working and components of a thermal power plant with the help of a neat layout.

Course Outcome 2 (CO2):

1. Explain briefly about the different types of solar collectors with neat sketches.
2. Explain the working of solar photovoltaic cells.
3. List the different methods used to estimate wind speed at a location.
4. Discuss site selection for wind power plants?

Course Outcome 3 (CO3):

1. Which are the main sources of Biomass?
2. With a neat sketch explain the working of a fixed dome type biogas plant.
3. Explain the biochemical and thermo chemical methods of biomass conversion.

Course Outcome 4 (CO4):

1. Explain the working principle of MHD power generation with a sketch.
2. Explain the components and working principle of any one hybrid power plant with sketches.
3. With the help of a neat diagram explain the working principle and applications of fuel cells.

Course Outcome 5 (CO5):

1. Explain any three methods for controlling air pollution by thermal power plants.
2. What is cause for the loss of biodiversity and how is biodiversity protected?
3. Describe the actions to be taken for sustainability of energy.

Model Question Paper

APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY
VI SEMESTER B.TECH DEGREE EXAMINATION
MET458: ADVANCED ENERGY ENGINEERING

Maximum: 100 Marks **Duration: 3 hours**

PART A
Answer all questions, each question carries 3 marks

1.Elaborate on the current global energy supply scenario.

2. What are the renewable energy resources? Discuss their importance in India's power requirement contest.

3. Explain the basic principle of wind energy conversion.

4. Distinguish between active and passive solar energy systems.

5. Explain the category of biomass resources.

6. "Energy released from biomass comes from Sun". elaborate on this point

7. Mention the impact of tidal energy power plants in the environment

8. Name the different processes used for Hydrogen production.

9. What is biodiversity?

10. List any four sources of land degradation (10 X 3 = 30 marks)

PART B
Answer one full question from each module

Module 1

11. (i) Sketch the layout of a diesel power plant. Explain the layout. (10 marks)
(ii)How do Industry Nation and Globe would benefit from energy efficiency programs.

(4 marks)

OR

12. Give the schematic layout of a thermal power plant and explain its working with the help of Rankine cycle (14 marks)

Module 2

13 Explain briefly about the different types of solar collectors with neat sketches.

(14 marks)

OR

14. (i) Elaborate on the construction and working of the different types of horizontal axis wind turbine. (10 marks)

(ii).What is the advantages of wind energy conversion systems? (4 marks)

Module 3

15. (i) Explain the biochemical and thermo chemical methods of biomass conversion (10 marks)

(ii) What is the difference between biomass and biogas? (4 marks)

OR

16. (i).With a neat sketch explain the working of a fixed dome type biogas plant. (10 marks)

(ii). Write a short note on gasification of biomass? (4 marks)

Module 4

17. With the help of a schematic diagram explain the closed cycle MHD and open cycle MHD (14 marks)

OR

18.With the help of a neat diagram explain the working principle and applications of fuel cells. (14 marks)

Module 5

19.(i).Briefly explain any four air pollutants and their effects (8 marks)
(ii) Explain the causes and effects of eutrophication (6 marks)

OR

20 (i).Define Global warming. What are the reasons for Global warming? (10 marks)
(ii). List out the environmental impact of utilizing hydroelectric power (4 marks)

Syllabus

Module 1

Introduction to the course,Global and Indian energy resources. Energy demand and supply. components, layout and working principles of steam, hydro, nuclear, gas turbine and diesel power plants .

Module 2

Solar Energy- passive and active solar thermal energy, solar collectors, solar thermal electric systems, solar photovoltaic systems,economics of solar power

Wind Energy-Principle of wind energy conversion system, wind turbines, aerodynamics of wind turbines, wind power economics,Introduction to solar-wind hybrid energy

Module 3

Biomass Energy – Biomass as a fuel, thermo-chemical, bio-chemical and agro-chemical conversion of biomass- pyrolysis, gasification, combustion and fermentation, transesterification, economics of biomass power generation, future prospects

Module 4

Other Renewable Energy sources – Brief account of Geothermal, Tidal, Wave, MHD power generation. Fuel cells – general description, types, applications. Hydrogen energy conversion systems, hybrid systems- Economics and technical feasibility

Module 5

Environmental impact of energy conversion – ozone layer depletion, global warming, greenhouse effect, loss of biodiversity, eutrophication, acid rain, air and water pollution, land degradation, thermal pollution, Sustainable energy, promising technologies, developmentpathways

Text Books:

1. P K Nag, Power Plant Engineering, TMH,2002
2. Jefferson W Tester, Sustainable Energy Choosing among options, PHI, 2006
3. Tiwari G N, Ghosal M K, Fundamentals of renewable energy sources, Alpha Science International Ltd., 2007

Reference Books:

Course Contents and Lecture Schedule

No.	Topic	No. of Lectures
I	Introduction to the course, Global and Indian energy resources. Energy demand and supply. Components, layout and working principles of steam, hydro, nuclear, gas turbine and diesel power plants	7
II	Solar Energy- passive and active solar thermal energy, solar collectors, solar thermal electric systems, solar photovoltaic systems, economics of solar power	6
	Wind Energy-Principle of wind energy conversion system, wind turbines, aerodynamics of wind turbines, wind power economics, Introduction to solar-wind hybrid energy	5
III	Biomass Energy – Biomass as a fuel, thermo-chemical, bio-chemical and agro-chemical conversion of biomass-pyrolysis, gasification, combustion and fermentation, transesterification, economics of biomass power generation, future prospects	6
IV	Other Renewable Energy sources – Brief account of Geothermal, Tidal , Wave, MHD power generation. Fuel cells – general description, types, applications. Hydrogen energy conversion systems, hybrid systems- Economics and technical feasibility	6
V	Environmental impact of energy conversion – ozone layer depletion, global warming, greenhouse effect, loss of biodiversity, eutrophication, acid rain, air and water pollution, land degradation, thermal pollution, Sustainable energy, promising technologies, development pathways`	6

CODE	COURSE NAME	CATEGORY	L	T	P	CREDIT
MET468	ADDITIVE MANUFACTURING	PEC	2	1	0	3

Preamble: This course addresses additive manufacturing principles, variety and its concept, scope of additive manufacturing and areas of application

Prerequisite: NIL

Course Outcomes: After the completion of the course the student will be able to

CO Nos	Course Outcomes	Level of learning domain
CO 1	Discuss various additive manufacturing processes	2
CO 2	Explain slicing operations in additive manufacturing	2
CO 3	Use liquid and solid based additive manufacturing system	3
CO 4	Select powder based and use of pre requirement of AM	2
CO 5	Apply rapid prototyping techniques for obtaining solutions	3

Mapping of course outcomes with program outcomes

Mark distribution

Total Marks	CIE	ESE	ESE Duration
150	50	100	3 hours

Continuous Internal Evaluation Pattern:

Attendance : 10 marks
Continuous Assessment Test (2 numbers) : 25 marks
Assignment/Quiz/Course project : 15 marks

End Semester Examination Pattern: There will be two parts; Part A and Part B. Part A contain 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 questions from each module of which student should answer any one. Each question can have maximum 2 sub-divisions and carry 14 marks.

Course Level Assessment Questions

Course Outcome 1 (CO1):

1. What is additive manufacturing?
2. What is STL file?
3. What is AM process chain?

Course Outcome 2 (CO2)

1. What is Model Slicing?
2. What are the softwares used for Tool path generation
3. What are the softwares currently used for AM?
4. What are the limitations of Tool path generation?

Course Outcome 3(CO3):

1. Brief the post processing types of LENS.
2. What are process variables in FDM?
3. What are the applications of EDM?

Course Outcome 4 (CO4):

1. What is STL file?
2. How does 3d Printing Work?
3. What are the merits of SLM?

Course Outcome 5 (CO5):

1. What are the benefits of rapid tooling?
2. What are the applications of rapid tooling?
3. What is Rapid Tooling?

Model Question Paper

MET 468 ADDITIVE MANUFACTURING

Max. Marks : 100 **Duration : 3 Hours**

Part – A

Answer all questions, each question carries 3 marks

1. Write a note on product development by AM?
2. Classify and Explain of additive manufacturing processes?
3.Brief about Support structure design?
4. What are the advantages of Part orientation?
5. Brief the LOM process.
6. What are the materials used in SLS
7. What are the strength and weakness of 3DP?
8. What are the merits of SLM?
9. What are the fundamentals of Rapid Prototyping?
10. List the types of industries that RP can be used in industrial applications?

PART -B

Answer one full question from each module.

MODULE – 1

11 a) Write a note on the benefits and applications of AM. (6 marks)
b) Write a note on the impact of AM on product development. (8 marks)

OR

12. a) Write a note on the need and development of AM systems. (8 marks)
b) Classify and explain the AM process. (6 marks)

MODULE – 2

13. a) Explain about data formats and data interfacing? (6 marks)
b) What is part orientation? Explain with illustrations? (8 marks)

OR

14. a) Explain the need of support generation with flow charts? (8 marks)
b) What are the steps involved in model slicing? (6 marks)

MODULE – 3

15. a) Brief about strength, Weakness and applications of SLA? (8 marks)
b) Explain the working principle and process variables of FDM. (6 marks)

OR

16 a) Brief about strength, Weakness and applications of SLS? (8 marks)
b) Explain the working principle and process variables of LOM. (6 marks)

MODULE – 4

17.a) Explain the working principle and process variables of 3DP (6 marks)
b) Compare solid, liquid and powder based system of 3DP. (8 marks)

OR

18 a) what is STL Format? Explain any two translators used in place of STL? (8 marks)
b) Explain the working principle and process variables of 3DP? (6 marks)

MODULE – 5

19 a) what are the benefits of using color in production of medical models? (6 marks)
b) What AM materials are already approved for medical applications and for what types of application are they suitable? (8 marks)

OR

20 a) Discuss the steps followed in rapid prototyping process. (6 marks)
b) What is rapid tooling and explain the applications of RPT in manufacturing and tooling. (8 marks)

SYLLABUS

Module 1

Introduction to Additive manufacturing: Importance of Additive Manufacturing- Basic principle of additive manufacturing- Procedure of product development in additive manufacturing. Classification of additive manufacturing processes, Materials used in additive manufacturing- Benefits & Challenges in Additive Manufacturing.

Module 2

Basic Concept — Digitization techniques — Model Reconstruction — Data Processing for Additive Manufacturing Technology: CAD model preparation — Part Orientation and support generation — Model Slicing —Tool path Generation- Introduction to slicing softwares: Cura.

Module 3

Principle, process parameters, advantages and applications of: Fused Deposition Modelling (FDM), Selective Laser Sintering (SLS), Stereo Lithography (SLA). Laminated Object Manufacturing (LOM), Electron Beam Melting (EBM), Laser Engineering Net Shaping (LENS),

Module 4

Principle, process parameters, advantages and applications of: Selection Laser Melting (SLM), Jetting, 3D Printing-STL Format, STL File Problems, consequence of building valid and invalid tessellated models, STL file Repairs: Generic Solution, other Translators, Newly Proposed Formats.

Module 5

Direct processes: - Rapid Prototyping, Rapid Tooling. Rapid Manufacturing; Indirect Processes: - Indirect Prototyping. Indirect Tooling, Indirect Manufacturing. Applications and case studies of Additive Manufacturing: –Biomedical- Manufacturing- Aerospace- Automotive- Food- Electronics.

CODE	COURSE NAME	CATEGORY	L	T	P	CREDIT
MET478	POWER PLANT ENGINEERING	PEC	2	1	0	3

Preamble: Power Plant Engineering basically focuses on power generation principles for real world applications. This course is focused on application of energy principles and power generation cycles. The main purpose of implementing this course in curriculum is to learn about how the power is generated in a power plant and its applications

Prerequisite: MET205 THERMODYNAMICS, MET303 THERMAL ENGINEERING

Course Outcomes: After the completion of the course the student will be able to

CO 1	Explain the layout, construction and working of the components inside a thermal power plant
CO 2	Explain the layout, construction and working of the components inside a Diesel, Gas and Combined cycle power plants.
CO 3	Explain the layout, construction and working of the components inside nuclear power plants.
CO 4	Explain the layout, construction and working of the components inside Renewable energy power plants.
CO 5	Identify applications of power plants, plant economics, environmental hazards and estimate the costs of electrical energy production.

End Semester Examination Pattern: There will be two parts; Part A and Part B. Part A contain 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 questions from each module of which student should answer any one. Each question can have maximum 2 sub-divisions and carry 14 marks.

Course Level Assessment Questions

Course Outcome 1 (CO1):

1. Comment on the methods used for handling of coal.

2. State the advantages and disadvantages of pulverized coal firing.

3. Illustrate and explain the functions of cooling tower.

Course Outcome 2 (CO2)

1. State the applications of diesel electric power plants.

2. List the components present in the diesel electric power plants.

3. Illustrate and explain working of a regenerative gas turbine and re-heater with a help of a Pv diagram.

Course Outcome 3(CO3):

1. List down the basic factors to be considered for the design of a nuclear power reactor

2. Give example for the components of pressurized water reactor nuclear power plan.

3. Describe the functionality of moderator.

Course Outcome 4 (CO4):

1. Enumerate the advantages and disadvantages of hydropower plants.

2. Comment on different types of ocean thermal energy conversion system.

3. Explain in detail about the various types of Wind energy system.

Course Outcome 5 (CO5):

1. Illustrate and explain the load duration curve.

2. A power station has two 60MW units each running for 1500 hours a year. The energy produced per year is 700 x 106 kW-hr. Calculate the plant load factor and plant use factor.

3. Define depreciation and elaborate its role in operation of a power plant.

Model Question Paper

APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY

EIGHTH SEMESTER B.TECH DEGREE EXAMINATION

Course Code: MET478

Course Name: POWER PLANT ENGINEERING

Max. Marks: 100 Duration: 3 Hours

PART – A

(ANSWER ALL QUESTIONS, EACH QUESTION CARRIES 3 MARKS)

1. Define drift? How drift is eliminated in cooling towers?

2. Comment on the types of burner employed for pulverized coals in the thermal power plants.

3. What are the methods of cooling in a diesel engine power plant?

4. List out the difference between open cycle and closed cycle gas turbine plant.

5. Mention the advantages of nuclear power plant.

6. Define “half-life” of nuclear fuels.

7. Comment on the working of a solar cell.

8. What are the advantages and limitations of tidal power plant?

9. Define the importance of capital cost in a power plant.

10. Define load factor and list out methods for improvement in load factor.

PART – B

(ANSWER ONE FULL QUESTION FROM EACH MODULE)

MODULE – 1

11. a) Explain the analysis of pollution from thermal power plants. (7 marks)

b) How ash is handled in the power plant? Explain the ash handling system. (7 marks)

OR

12. a) Explain the principle involved in preparation of coal and what are the methods of preparation? (7 marks)

b) Illustrate and explain the working different types of cooling towers. (7 marks)

MODULE – 2

13. a) Give the layout of diesel engine power plant. What are the advantages and disadvantages of diesel power plants? (7 marks)

b) List out the difference between the closed cycle and open cycle gas turbine power plants (7 marks)

OR

14. a) Illustrate and explain working of a regenerative gas turbine and re-heater with help of a P-v diagram (7 marks)

b) What are the methods used for improving the efficiency of a gas turbine plant? (7 marks)

MODULE – 3

15. a) Explain with neat sketches and with examples difference between controlled and uncontrolled chain reaction? (7 marks)

b) Describe the boiling water reactor with the help of neat sketch and explain its chief characteristics (7 marks)

OR

16. a) Explain the working of a typical fast breeder nuclear reactor power plant, with the help of neat diagram (7 marks)

b) Define commonly used methods of nuclear waste disposal and discuss their salient features. (7 marks)

MODULE – 4

17. a) Explain the factors to be considered while selecting the site of a hydro power plant? (7 marks)

b) Explain the construction and working of Geo thermal power plant (7 marks)

OR

18. a) Explain with a neat diagram of wind electric generating power plant. (7 marks)

b) Explain in detail about the various types of Wind energy system. (7 marks)

MODULE – 5

19. A central power station has annual factors as follows: Load factor = 60%, Capacity factor = 40%, Use factor = 45%, Power station has a maximum demand of 15,000 kW. Determine: Annual energy production, Reserve capacity over and above peak load, Hours per year not in service. (14 marks)

OR

20. a) What are the elements which contribute to the cost of the electricity? How can the cost power generation be reduced? (7 marks)

b) Define power plant economics? Explain the fixed and operating cost of a power station (7 marks)

Syllabus

Module 1

COAL BASED THERMAL POWER PLANTS

Rankine cycle – improvisations, Layout of modern coal power plant, Super Critical Boilers, FBC Boilers, Turbines, Condensers, Steam & Heat rate, Subsystems of thermal power plants – Fuel and ash handling, Draught system, Feed water treatment. Binary Cycles and Cogeneration systems.

Module 2

DIESEL, GAS TURBINE AND COMBINED CYCLE POWER PLANTS

Otto, Diesel, Dual & Brayton Cycle – Analysis & Optimisation. Components of Diesel and Gas Turbine power plants. Combined Cycle Power Plants. Integrated Gasifier based Combined Cycle systems.

Module 3

NUCLEAR POWER PLANTS

Basics of Nuclear Engineering, Layout and subsystems of Nuclear Power Plants, Working of Nuclear Reactors : Boiling Water Reactor (BWR), Pressurized Water Reactor (PWR), CANada Deuterium- Uranium reactor (CANDU), Breeder, Gas Cooled and Liquid Metal Cooled Reactors. Safety measures for Nuclear Power plants.

Module 4

POWER FROM RENEWABLE ENERGY

Hydro Electric Power Plants – Classification, Typical Layout and associated components including Turbines. Principle, Construction and working of Wind, Tidal, Solar Photo Voltaic (SPV), Solar Thermal, Geo Thermal, Biogas and Fuel Cell power systems.

Module 5

ENERGY, ECONOMIC AND ENVIRONMENTAL ISSUES OF POWER PLANTS

Power tariff types, Load distribution parameters, load curve, Comparison of site selection criteria, relative merits & demerits, Capital & Operating Cost of different power plants. Pollution control technologies including Waste Disposal Options for Coal and Nuclear Power Plants.

5.3	Pollution control technologies	2

MET404	COMPREHENSIVE COURSE VIVA	CATEGORY	L	T	P	CREDIT
		PCC	1	0	0	1

Preamble: The objective of this Course viva is to ensure the basic knowledge of each student in the most fundamental core courses in the curriculum. The viva voce shall be conducted based on the core subjects studied from third to eighth semester. This course helps the learner to become competent in placement tests and other competitive examinations.

Guidelines

1. The course should be mapped with a faculty and classes shall be arranged for practicing questions based on the core courses listed in the curriculum.
2. The viva voce will be conducted by the same three member committee assigned for final project phase II evaluation. It comprises of Project coordinator, expert from Industry/research Institute and a senior faculty from a sister department.
3. The pass minimum for this course is 25.
4. The mark will be treated as internal and should be uploaded along with internal marks of other courses.
5. Comprehensive Viva should be conducted along with final project evaluation by the three member committee.

Mark Distribution

Total marks: 50, only CIE, minimum required to pass : 25 Marks

MED416	PROJECT PHASE II	CATEGORY	L	T	P	CREDIT
		PWS	0	0	12	4

Preamble: The course 'Project Work' is mainly intended to evoke the innovation and invention skills in a student. The course will provide an opportunity to synthesize and apply the knowledge and analytical skills learned, to be developed as a prototype or simulation. The project extends to 2 semesters and will be evaluated in the 7th and 8th semester separately, based on the achieved objectives. One third of the project credits shall be completed in 7th semester and two third in 8th semester. It is recommended that the projects may be finalized in the thrust areas of the respective engineering stream or as interdisciplinary projects. Importance should be given to address societal problems and developing indigenous technologies.

Course Objectives

- To apply engineering knowledge in practical problem solving.
- To foster innovation in design of products, processes or systems.
- To develop creative thinking in finding viable solutions to engineering problems.

Course Outcomes [COs]: After successful completion of the course, the students will be able to:

CO1	Model and solve real world problems by applying knowledge across domains (Cognitive knowledge level: **Apply**).
CO2	Develop products, processes or technologies for sustainable and socially relevant applications (Cognitive knowledge level: **Apply**).
CO3	Function effectively as an individual and as a leader in diverse teams and to comprehend and execute designated tasks (Cognitive knowledge level: **Apply**).
CO4	Plan and execute tasks utilizing available resources within timelines, following ethical and professional norms (Cognitive knowledge level: **Apply**).
CO5	Identify technology/research gaps and propose innovative/creative solutions (Cognitive knowledge level: **Analyze**).
CO6	Organize and communicate technical and scientific findings effectively in written and oral forms (Cognitive knowledge level: **Apply**).

PO3	Design/Development of solutions	PO9	Individual and team work
PO4	Conduct investigations of complex problems	PO0	Communication
PO5	Modern tool usage	PO11	Project Management and Finance
PO6	The Engineer and Society	PO12	Lifelong learning

PROJECT PHASE II

Phase 2 Targets

- In depth study of the topic assigned in the light of the report prepared under Phase - I;
- Review and finalization of the approach to the problem relating to the assigned topic.
- Preparing a detailed action plan for conducting the investigation, including teamwork.
- Detailed Analysis/ Modeling / Simulation/ Design/ Problem Solving/Experiment as needed.
- Final development of product/ process, testing, results, conclusions and future directions.
- Preparing a paper for Conference Presentation/ Publication in Journals, if possible.
- Presenting projects in Project Expos conducted by the University at the cluster level and/ or state level as well as others conducted in India and abroad.
- Filing Intellectual Property Rights (IPR) if applicable.
- Preparing a report in the standard format for being evaluated by the Department Assessment Board.
- Final project presentation and viva voce by the assessment board including the external expert.

Evaluation Guidelines & Rubrics

Total: 150 marks (Minimum required to pass: 75 marks).

- Project progress evaluation by guide: 30 Marks.
- Two interim evaluations by the Evaluation Committee: 50 Marks (25 marks for each evaluation).
- Final evaluation by the Final Evaluation committee: 40 Marks
- Quality of the report evaluated by the evaluation committee: 30 Marks

(The evaluation committee comprises HoD or a senior faculty member, Project coordinator and project supervisor. The final evaluation committee comprises of Project coordinator, expert from Industry/research/academic Institute and a senior faculty from a sister department).

Evaluation by the Guide

The guide/supervisor must monitor the progress being carried out by the project groups on regular basis. In case it is found that progress is unsatisfactory it should be reported to the Department Evaluation Committee for necessary action. The presence of each student in the group and their involvement in all stages of execution of the project shall be ensured by the guide. Project evaluation by the guide: 30 Marks. This mark shall be awarded to the students in his/her group by considering the following aspects:

Project Scheduling & Distribution of Work among Team members: Detailed and extensive Scheduling with timelines provided for each phase of project. Work breakdown structure well defined. (5)

Literature survey: Outstanding investigation in all aspects. (4)

Student's Diary/ Daily Log: The main purpose of writing daily diary is to cultivate the habit of documenting and to encourage the students to search for details. It develops the students' thought process and reasoning abilities. The students should record in the daily/weekly activity diary the day to day account of the observations, impressions, information gathered and suggestions given, if any. It should contain the sketches & drawings related to the observations made by the students. The daily/weekly activity diary shall be signed after every day/week by the guide. (7)

Individual Contribution: The contribution of each student at various stages. (9)

Completion of the project: The students should demonstrate the project to their respective guide. The guide shall verify the results and see that the objectives are met. (5)

EVALUATION RUBRICS for PROJECT Phase II: Interim Evaluation - 1						
No.	**Parameters**	**Marks**	**Poor**	**Fair**	**Very Good**	**Outstanding**
2-a	Novelty of idea, and Implementation scope [CO5] [Group Evaluation]	**5**	The project is not addressing any useful requirement. The idea is evolved into a non-implementable one. The work presented so far is lacking any amount of original work by the team.	Some of the aspects of the proposed idea can be implemented. There is still lack of originality in the work done so far by the team. The project is a regularly done theme/topic without any freshness in terms of specifications, features, and/or improvements.	Good evidence of an implementable project. There is some evidence for the originality of the work done by the team . There is fresh specifications/ features/improvements suggested by the team. The team is doing a design from fundamental principles, and there is some independent learning and engineering ingenuity.	The project has evolved into incorporating an outstandingly novel idea. Original work which is not yet reported anywhere else. Evidence for ingenious way of innovation which is also Implementable. Could be a patentable / publishable work.
			(0 – 1 Marks)	(2 – 3 Marks)	(4 Marks)	(5 Marks)
2-b	Effectiveness of task distribution among team members. [CO3] [Group Evaluation]	**5**	No task distribution of any kind. Members are still having no clue on what to do.	Task allocation done, but not effectively, some members do not have any idea of the tasks assigned. Some of the tasks were identified but not followed individually well.	Good evidence of task allocation being done, supported by project journal entries, identification of tasks through discussion etc. However, the task distribution seems to be skewed, and depends a few members heavily than others. Mostly the tasks are being followed by the individual members.	Excellent display of task identification and distribution backed by documentary evidence of team brainstorming, and project journal entries. All members are allocated tasks according to their capabilities, and as much as possible in an equal manner. The individual members are following the tasks in an excellent manner.
			(0 – 1 Marks)	(2 – 3 Marks)	(4 Marks)	(5 Marks)
2-c	Adherence to project schedule. [CO4] [Group Evaluation]	**5**	Little or no evidence of continued planning or scheduling of the project. The students did not stick to the plan what they were going to build nor plan on what materials / resources to use in the project. The students do not have any idea on the budget required even after the end of phase - I. No project journal kept or the journal.	There is some improvement in the primary plan prepared during phase I. There were some ideas on the materials /resources required, but not really thought out. The students have some idea on the finances required, but they have not formalized a budget plan. Schedules were not prepared. The project journal has no useful details on the project.	Good evidence of planning done and being followed up to a good extent after phase I. Materials were listed and thought out, but the plan wasn't followed completely. Schedules were prepared, but not detailed, and needs improvement. Project journal is presented but it is neither complete nor updated regularly.	Excellent evidence of enterprising and extensive project planning and follow-up since phase I. Continued use of project management/version control tool to track the project. Material procurement if applicable is progressing well. Tasks are updated and incorporated in the schedule. A well-kept project journal showed evidence for all the above, in addition to the interaction with the project guide.
			(0 - 1 Marks)	(2 - 3 Marks)	(4 Marks)	(5 Marks)

2-d	Interim Results. [CO6] [Group assessment]	**5**	There are no interim results to show.	The team showed some interim results, but they are not complete / consistent to the current stage, Some corrections are needed.	The interim results showed were good and mostly consistent/correct with respect to the current stage. There is room for improvement.	There were significant interim results presented which clearly shows the progress.
			(0 - 1 Marks)	(2 - 3 Marks)	(4 Marks)	(5 Marks)
2-e	Presentation [Individual assessment]	**5**	Very poor presentation and there is no interim results. The student has no idea about the project proposal.	Presentation is average, and the student has only a feeble idea about the team work.	Good presentation. Student has good idea about the team's project. The overall presentation quality is good.	Exceptionally good presentation. Student has excellent grasp of the project. The quality of presentation is outstanding.
			(0 - 1 Marks)	(2 - 3 Marks)	(4 Marks)	(5 Marks)
Phase-II Interim Evaluation - 1 Total Marks: 25						

EVALUATION RUBRICS for PROJECT Phase II: Interim Evaluation – 2

No	Parameters	Marks	Poor	Fair	Very Good	Outstanding
2-f	Application of engineering knowledge [CO1] [Individual Assessment]	**10**	The student does not show any evidence of applying engineering knowledge on the design and the methodology adopted. The student's contribution in application of engineering knowledge in the project is poor.	The student appears to apply some basic knowledge, but not able to show the design procedure and the methodologies adopted in a comprehensive manner.	The student is able to show some evidence of application of engineering knowledge in the design and development of the project to good extent.	Excellent knowledge in design procedure and its adaptation. The student is able to apply knowledge from engineering domains to the problem and develop solutions.
			(0 – 3 Marks)	(4 – 6 Marks)	(7 - 9 Marks)	(10 Marks)
2-g	Involvement of individual members [CO3] [Individual Assessment]	**5**	No evidence of any Individual participation in the project work.	There is evidence for some amount of individual contribution, but is limited to some of the superficial tasks.	The individual contribution is evident. The student has good amount of involvement in core activities of the project.	Evidence available for the student acting as the core technical lead and has excellent contribution to the project.
			(0 - 1 Marks)	(2 - 3 Marks)	(4 Marks)	(5 Marks)
2-h	Results and inferences upon execution [CO5] [Group Assessment]	**5**	None of the expected outcomes are achieved yet. The team is unable to derive any inferences on the failures/ issues observed. Any kind o f observations or studies are not made.	Only a few of the expected outcomes are achieved. A few inferences are made on the observed failures/issues. No further work suggested.	Many of the expected outcomes are achieved. Many observations and inferences are made, and attempts to identify the issues are done. Some suggestions are made for further work.	Most of the stated outcomes are met. Extensive studies are done and inferences drawn. Most of the failures are addressed and solutions suggested. Clear and valid suggestions made for further work.
			(0 - 1 Marks)	(2 - 3 Marks)	(4 Marks)	(5 Marks)
2-i	Documentation and presentation. ·[CO6] [Individual assessment]	**5**	The individual student has no idea on the presentation of his/her part. The presentation is of poor quality.	Presentation's overall quality needs to be improved.	The individual's presentation performance is satisfactory.	The individual's presentation is done professionally and with great clarity. The individual's performance is excellent.
			(0 - 1 Marks)	(2 - 3 Marks)	(4 Marks)	(5 Marks)
Phase-II Interim Evaluation - 2 Total Marks: 25						

EVALUATION RUBRICS for PROJECT Phase II: Final Evaluation						
No	**Parameters**	**Marks**	**Poor**	**Fair**	**Very Good**	**Outstanding**
2-j	Engineering knowledge. [CO1] [Group Assessment]	10	The team does not show any evidence of applying engineering knowledge on the design and the methodology adopted.	The team is able to show some of the design procedure and the methodologies adopted, but not in a comprehensive manner.	The team is able to show evidence of application of engineering knowledge in the design and development of the project to good extent. There is scope for improvement.	Excellent knowledge in design procedure and its adaptation. The team is able to apply knowledge from engineering domains to the problem and develop an excellent solution.
			(0 – 3 Marks)	(4 – 6 Marks)	(7 - 9 Marks)	(10 Marks)
2-k	Relevance of the project with respect to societal and/or industrial needs. [Group Assessment] [CO2]	5	The project as a whole do not have any societal / industrial relevance at all.	The project has some relevance with respect to social and/or industrial application. The team has however made not much effort to explore further and make it better.	The project is relevant to the society and/or industry. The team is mostly successful in translating the problem into an engineering specification and managed to solve much of it.	The project is exceptionally relevant to society and/or industry. The team has made outstanding contribution while solving the problem in a professional and/ or ethical manner.
			(0 - 1 Marks)	(2 - 3 Marks)	(4 Marks)	(5 Marks)
2-i	Innovation / novelty / Creativity [CO5] [Group Assessment]	5	The project is not addressing any useful requirement. The idea is evolved into a non-implementable one. The work presented so far is lacking any amount of original work by the team.	Some of the aspects of the proposed idea appears to be practical. There is still lack of originality in the work done. The project is a regularly done theme/topic without any freshness in terms of specifications, features, and/ or improvements.	Good evidence of an implementable project. There is some evidence for the originality of the work done by the team. There is fresh specifications/ features/improvements suggested by the team. The team is doing a design from fundamental principles, and there is some independent learning and engineering ingenuity. Could be translated into a product / process if more work is done.	The project has evolved into incorporating an outstandingly novel idea. Original work which is not yet reported anywhere else. Evidence for ingenious way of innovation which is also Implementable. Could be a patentable publishable work.
			(0 - 1 Marks)	(2 - 3 Marks)	(4 Marks)	(5 Marks)
2-m	Quality of results / conclusions / solutions. [CO1] [Group Assessment]	10	None of the expected outcomes are achieved. The team is unable to derive any inferences on the failures/issues observed. Any kind of observations or studies is not made.	Only a few of the expected outcomes are achieved. A few inferences are made on the observed failures/issues. No further work suggested.	Many of the expected outcomes are achieved. Many observations and inferences are made, and attempts to identify the issues are done. Some suggestions are made for further work.	Most of the stated outcomes are met. Extensive studies are done and inferences drawn. Most of the failures are addressed and solutions suggested. Clear and valid suggestions made for further work.
			(0 – 3 Marks)	(4 – 6 Marks)	(7 - 9 Marks)	(10 Marks)

2-n	Presentation - Part I Preparation of slides. [CO6] [Group Assessment].	5	The presentation slides are shallow and in a clumsy format. It does not follow proper organization.	Presentation slides follow professional style formats to some extent. However, its organization is not very good. Language needs to be improved. All references are not cited properly, or acknowledged. Presentation slides needs to be more professional.	Presentation slides follow a good style format and there are only a few issues. Organization of the slides is good. Most of references are cited properly. The flow is good and team presentation is neatly organized. Some of the results are not clearly shown. There is room for improvement.	The presentation slides are exceptionally good. Neatly organized. All references cited properly. Diagrams/Figures, Tables and equations are properly numbered, and l i s ted. Results/ inferences clearly highlighted and readable.
			(0 - 1 Marks)	(2 - 3 Marks)	(4 Marks)	(5 Marks)
	Presentation - Part II: Individual Communication [CO6] [Individual Assessment].	5	The student is not communicating properly. Poor response to questions.	The student is able to explain some of the content. The student requires a lot of prompts to get to the idea. There are language issues.	Good presentation/ communication by the student. The student is able to explain most of the content very well. There are however, a few areas where the student shows lack of preparation. Language is better.	Clear and concise communication exhibited by the student. The presentation is outstanding. Very confident and tackles all the questions without hesitation. Exceptional traits of communicator.
			(0 - 1 Marks)	(2 - 3 Marks)	(4 Marks)	(5 Marks)
Phase-II Final Evaluation, Marks: 40						

EVALUATION RUBRICS for PROJECT Phase II: Report Evaluation						
Sl. No.	**Parameters**	**Marks**	**Poor**	**Fair**	**Very Good**	**Outstanding**
2-o	Report [CO6]	30	The prepared report is shallow and not as per standard format. It does not follow proper organization. Contains mostly unacknowledged content. Lack of effort in preparation is evident. References are not cited. Unprofessional and inconsistent formatting.	Project report follows the standard format to some extent. However, its organization is not very good. Language needs to be improved. All references are not cited properly in the report. There is lack of formatting consistency.	Project report shows evidence of systematic documentation. Report is mostly following the standard style format and there are only a few issues. Organization of the report is good. Mostly consistently formatted. Most of references/sources are cited/ acknowledged properly.	The report is exceptionally good. Neatly organized. All references cited properly. Diagrams/Figures, Tables and equations are properly numbered, and listed and clearly shown. Language is excellent and follows professional styles. Consistent formatting and exceptional readability.
			(0 - 11 Marks)	(12 - 18 Marks)	(19 - 28 Marks)	(29 - 30 Marks)
Phase - II Project Report Marks: 30
