SEMESTER - 2

| 20MCA102 | ADVANCED DATABASE | CATEGORY | L | TP | CREDIT |
|----------|-------------------|----------|---|-----|--------|
| | MANAGEMENT YSTEMS | GENERAL | 3 | 1 0 | 4 |

Preamble: This course provides the basic concepts and terminology related to relational and non-relational database management systems. The concept of advanced DBMS techniques and new generation databases like MongoDB, HBase and Cassandra are also introduced. This course serves as a prerequisite for many advanced courses in Data Science and Machine Learning areas.

Prerequisite: Basic knowledge in Database Management Systems.

Course Outcomes: After the completion of the course the student will be able to

| CO 1 | Understand the fundamentals of relational database systems including: data models, database architectures and ER features. |
|-------------|--|
| CO 2 | Analyze and apply the different normalization techniques. |
| CO 3 | Assess the basic issues of transaction processing and concurrency control. |
| CO 4 | Understand the roles that databases play in organizations and familiarize with basic database storage, file organization, database accessing techniques. |
| CO 5 | Understand the basics of query processing, object-oriented, distributed databases. |
| CO 6 | Analyze non-relational database systems and structures and XML. |

Mark distribution

| Total Marks | CIE | ESE | ESE Duration |
|-------------|-----|-----|--------------|
| 100 | 40 | 60 | 3 hours |

Continuous Internal Evaluation Pattern:

Attendance : 8 marks

Continuous Assessment Test (2 numbers) : 20 marks

Assignment/Quiz/Course project : 12 marks

End Semester Examination Pattern: There will be two parts; Part A and Part B. Part A contains 10 compulsory short answer questions, 2 from each module. Each question carries 3 marks. Part B contains 2 questions from each module of which student should answer any one. Each question can have maximum 2 sub-divisions and carry 6 marks.

Course Level Assessment Questions

Course Outcome 1 (CO1):

- 1. Examine why databases are important. (K3)
- 2. Describe the basic features of the relational data model and discuss their importance to the end user and the designer. (K2)

2014

3. Analyze the graphic depiction of relationships among the entities and examine how these depictions help in the database design process. (K3 & K4)

Course Outcome 2 (CO2):

Evaluate and design good table structures to control data redundancies and anomalies.
 (K5 & K6)

Course Outcome 3(CO3):

- 1. Explain the database transaction and its properties. (K2)
- 2. Describe concurrency control and analyze the role it plays in maintaining the database integrity. (K2 & K4)
- 3. Assess the common algorithms for concurrency control. (K5)
- 4. Define deadlock and discuss the strategies for managing deadlocks. (K1 & K2)
- 5. Examine how database recovery management is used to maintain database integrity. (K3)

Course Outcome 4 (CO4):

- 1. Discuss the various disk-organization techniques. (K2)
- 2. Describe the various data structures that allow fast access to data. (K2)
- 3. Analyze and examine the different indexing techniques. (K3 & K4)

Course Outcome 5 (CO5):

- Describe the basics of query processing and evaluate the query processing cost.
 (K2 & K5)
- 2. Analyze the concept of object oriented databases and distributed databases. (K4)

Course Outcome 6 (CO6):

- 1. Explain the concept of XML. (K2)
- 2. Describe the various NoSQL databases. (K2)

SYLLABUS

Module I:

Relational Databases:- Introduction - Purpose of Database System - Database System Applications - View of data: Data Abstraction, Instances and Schemas, Data Models - Database Architecture - Database Users and Administrators: Database Users and Interfaces, DBA - Introduction to the Relational Model: Structure of Relational Database, database Schema, Keys, Relational Query language - The Relational Algebra: Fundamental Operations, Formal definition of the relational algebra, additional relational algebra operations - The Entity-Relationship model: Entity Set, Relationship Set, Attributes - Constraints: Mapping cardinalities, Key Constraints, Participation Constraints - E-R Diagrams: Basic structure, Complex attributes, Roles, Non binary relationship sets, Weak Entity Set, Relational Database Design using ER- to Relational Mapping - Extended ER Features: Specialization, Generalization, Attribute inheritance, Constraints on generalization, Aggregation.

Module II:

Database Design: Database Tables and Normalization – The Need for Normalization – The Normalization Process: Inference Rules for Functional Dependencies (proof not needed) - Minimal set of Functional Dependencies - Conversion to First Normal Form, Conversion to Second Normal Form, Conversion to Third Normal Form - Improving the Design - Surrogate Key Considerations - Higher Level Normal Forms: Boyce/Codd Normal Form, Fourth Normal Form, Join dependencies and Fifth Normal Form - Normalization and Database Design.

Module III:

Transaction Management and Concurrency Control:- Transaction: Evaluating Transaction Results, Transaction Properties, Transaction Management with SQL, The Transaction Log – Concurrency Control: Lost Updates, Uncommitted Data, Inconsistent Retrievals, The Scheduler – Concurrency Control with Locking Methods: Lock Granularity, Lock Types, Two Phase Locking to Ensure Serializability, Deadlocks – Concurrency Control with Timestamping Methods: Wait/Die and Wait/Wound Schemes – Concurrency Control with Optimistic Methods - Database Recovery Management: Transaction Recovery.

Module IV:

Data Storage and Querying:- RAID – File Organization – Organization of Records in Files – Indexing and Hashing: Basic concept, Ordered Indices, B+ tree Index Files: Structure of a B+- Tree (structure only, algorithms not needed) - B tree index files – Static Hashing – Dynamic Hashing – Query Processing: Overview - Selection Operation.

Module V:

System Architecture, Object Oriented Databases, XML and NoSQL:- Distributed Databases: Homogeneous and Heterogeneous Databases, Distributed Data Storage,

Distributed Transactions - Object Based Databases: Overview, Complex Data types, Structured types and inheritance in SQL, Table Inheritance, Array and Multiset types in SQL, Object identity and reference types in SQL - XML: DTD and XML Schema, XML presentation, XML Applications - Next Generation Databases: Distributed Relational Databases - Nonrelational Distributed Databases - MongoDB Sharding and Replication - Hbase - Cassandra - CAP Theorem.

Text Books

|----------|-------------------|----------|---|---|---|--------|
| | NETWORKS | GENERAL | 3 | 1 | 0 | 4 |

Preamble: This course intends to provide insight into Advanced Computer Networks. A software professional should have an understanding of layered network architecture. Various kinds of network architectures, issues in integrating networks to modern application development are to be addressed. It is also intended to expose the student to modern technologies such as IPV6 and software defined networks. More detailed treatment can be done through seminars, assignments and talks by eminent external experts.

Prerequisite: Basic concepts of computer operating systems.

Course Outcomes: After the completion of the course the student will be able to

| CO 1 | Comprehend the terminology and concepts of basic communication model, analyse |
|------|---|
| | the protocol layers and design application layer protocols. |
| CO 2 | Understand and analyse the various transport layer protocols. |
| CO 3 | Compare and contrast various routing algorithms in the network layer. |
| CO 4 | Understand and analyse the concepts of link layer and physical layer. |
| CO 5 | Understand how modern cellular and wireless networks work |

Continuous Internal Evaluation Pattern:

Attendance : 8 marks

Continuous Assessment Test (2 numbers) : 20 marks Assignment/Quiz/Course project : 12 marks

End Semester Examination Pattern: There will be two parts; Part A and Part B. Part A contains 10 compulsory short answer questions, 2 from each module. Each question carries 3 marks. Part B contains 2 questions from each module of which student should answer any one. Each question can have maximum 2 sub-divisions and carry 6 marks

Course Level Assessment Questions

Course Outcome 1 (CO1):

- 1. Explain HTTP request-response behavior with a neat diagram.
- 2. Compare and contrast OSI and TCP/IP network reference models.
- 3. Explain the importance of layering in data communication.

Course Outcome 2 (CO2)

- 1. Explain the process of three-way handshaking in TCP.
- 2. Compare and contrast Multiplexing and De-multiplexing process in transport layer.
- 3. Explain How TCP is controlling congestion during data transmission.

Course Outcome 3(CO3):

- 1. Explain how multicast routing is used in routing protocols.
- 2. Compare and contrast IPV4 and IPV6.
- 3. Differentiate virtual circuits and datagram networks.

Course Outcome 4 (CO4):

- 1. Explain how parity is used to achieve error detection in data communication.
- 2. Illustrate IEEE 802.3 frame structure.
- 3. Write short notes on routers, switches and bridges.

Course Outcome 5 (CO5):

- 1. List out and explain the various IEEE 802.11 WLAN Components.
- 2. Explain the architecture of Bluetooth in personal area networks.
- 3. Explain any six network attacks and their counter measures.

Model Question paper

Part A

- 1. Differentiate HTTP persistent and non-persistent communication.
- 2. List out and explain the functionalities of different DNS records.
- 3. Compare TCP and UDP at transport layer.
- 4. Demonstrate how stop-and-wait protocol is used for reliable data transfer.
- 5. Explain how IPv6 solve the problem of IPv4 exhaustion?
- 6. Explain how ARP is working in data link layer?
- 7. A series of 8-bit message blocks to be transmitted across a data link using CRC for error detection. A generator polynomial of $x^3 + x^2 + 1$ is to be used. Message transmitted as 110010. Explain how CRC check is implemented?
- 8. Classify various wired media used in short and long distance communication.
- 9. Explain Network Address Translation (NAT).
- 10. Explain piconet topology of Bluetooth?

[3x10=30 Marks]

Part B

Module 1

11. List and explain ISO/OSI layers and their functions.

[6 Marks]

OR

12. Describe various service models in Quality of Service (QOS).

[6 Marks]

Module 2

- 13. Write a short note on:
 - a. Stop-and-wait

[3 Marks]

b. Go-back-N

[3 Marks]

-OR $^{-1}$

14. Explain the principles of congestion control with its fairness and efficiency. [6 Marks]

Module 3

15. Define routing? Explain the process of link state routing with OSPF protocol.

OR

[6 Marks]

16. What is Virtual circuit? Explain the connection management in Virtual circuit with suitable diagrams.

[6 Marks]

Module 4

17. Write a short note on:

a. Collision based multiple access protocol

[3 Marks]

b. Token based multiple access protocol

[3 Marks]

OR

18. Explain IEEE 802.3 Ethernet frame format with its access protocol.

[6 Marks]

Module 5

19. What is Bluetooth? Explain the various layers of Bluetooth with a neat diagram.

[6 Marks]

OR

20. Write a short note on:

a. Traffic analysis tools

[3 Marks]

b. Troubleshooting

[3 Marks]

Preamble: This course introduces the concepts and application of probability distribution, Correlation, Regression and testing of hypothesis. The topics treated in this course have applications in Computer Science.

Course Outcomes: After the completion of the course the student will be able to

| CO 1 | Apply the concept of discrete probability distributions in determining the parameters of the distribution and hence to solve different problems |
|------|---|
| CO 2 | Apply the concept of continuous probability distribution in solving different problems |
| CO 3 | Apply the principles of correlation and regression in practical problems. |
| CO 4 | Develop confidence intervals for various problems. |
| CO 5 | Test the given hypothesis on the basis of known criteria. |

| 100 | 40 | 60 | 3 hours |

Continuous Internal Evaluation Pattern:

Attendance : 8 marks
Continuous Assessment Test (2 numbers) : 20 marks
Assignment/Quiz/Course project : 12 marks

End Semester Examination Pattern: There will be two parts; Part A and Part B. Part A contains 10 compulsory short answer questions, 2 from each module. Each question caries 3 marks. Part B contains 2 questions from each module of which student should answer any one. Each question can have maximum 2 sub-divisions and carry 6 marks

Course Level Assessment Questions

Course Outcome 1 (CO1):

1. With the usual notation find p for the binomial random variable X, if n = 6 and

$$9 p[x = 4] = p[x = 2] (K3)$$

- 2. Define Poisson distribution. Derive it's Mean. (K1)
- 3. A die is tossed twice. Getting 'a number greater than 4' is considered as success. Find the mean and variance of the probability distribution of the number of success. (K3)

Course Outcome 2 (CO2)

- 1. Define distribution function of a continuous random variable. Also state it's important properties. (K1)
- 2. Derive the mean and variance of a continuous uniform distribution. (K4)
- 3. In a normal distribution 31% of the items are under 45 and 8% are over 64. Find the mean and standard deviation of the distribution. (K3)

Course Outcome 3(CO3):

- 1. State the principle of least squares. (K1)
- 2. Fit a parabola by the method of least squares, to the following data. (K3)

x: 1 2 3 4 5 y: 5 12 26 60 97

3. Compute the correlation coefficient from the following data. (K3)

52 90 96 77 54 27 14 35 25 60 x: 35 58 60 40 50 40 35 56 34 42 y:

Course Outcome 4 (CO4):

- 1. Differentiate parameter and statistic. (K1)
- 2. A random sample of 700 units from a large consignment showed that 200 were damaged. Find i) 95% and ii) 99% confidence limits for proportion of damaged limits in the consignment. (K3)
- 3. Explain different types of sampling. (K2)

Course Outcome 5 (CO5):

- 1. State Type I and Type II error. (K1)
- **2.** Explain the different steps in testing of hypothesis. (K2)
- **3.** In a big city 325 men out of 600 men were found to be smokers. Does this information support the conclusion that the majority of men in this city are smokers? (K5)

Syllabus

Module 1

Introduction – Random Experiment, Random Variables, Discrete Random Variables, Probability Distributions and Probability Mass Functions, Mean and Variance of a Discrete Random Variable, Discrete Uniform Distribution - Mean and Variance, Binomial Distribution - Mean and Variance, Geometric Distribution - Mean and Variance, Poisson Distribution - Mean and Variance

Module 2

Continuous Random Variables, Probability Density Functions, Mean and Variance of a Continuous Random Variable, Continuous Uniform Distribution- Mean and Variance, Normal Distribution-Mean and Variance (Proof not required), Standard Normal Distribution, Exponential Distribution.

Module 3

Curve fitting – Principle of least squares – fitting a straight line – fitting a parabola – linear correlation and regression – Karl's Pearson's Coefficient of Correlation.

Joint and marginal probability distribution - Conditional probability distribution - independent random variable (discrete case only).

Module 4

Sampling distribution – Introduction to sampling – random sampling – sampling distribution – standard error – estimation – interval estimates and confidence interval – estimation of population mean and proportions (small and large samples).

Module 5

Testing of hypothesis – introduction – basic concepts – Hypothesis concerning a mean – equality of means – Hypothesis concerning one proportion – difference of two proportions.

|----------|----------------|----------|---|---|---|--------|
| | BEHAVIOUR | ELECTIVE | 3 | 1 | 0 | 4 |

Preamble: This course is designed primarily for students who are being exposed to Organizational Behaviour for the first time. Primary aim of this course is to help students to understand the organizational culture and its dynamics and to acquire skills to take rational decisions in groups or organizations.

Prerequisite: Nil

Course Outcomes: After the completion of the course the student will be able to

| CO 1 | Identify managers' challenges and opportunities in applying OB concepts. |
|------|---|
| CO 2 | Analyse various characteristics of individual behaviour and its impact on organizational performance. |
| CO 3 | Acquire knowledge about the complexities associated with management of individual behaviour in the organization. |
| CO 4 | Understand group behaviour and develop inter-personal skills and group dynamics. |
| CO 5 | Understand organizational structures and analyze the behavioral implications of different organizational designs. |

Continuous Internal Evaluation Pattern:

Attendance : 8 marks
Continuous Assessment Test (2 numbers) : 20 marks
Assignment/Seminar/Course project : 12 marks

End Semester Examination Pattern: There will be two parts; Part A and Part B. Part A contains 10 compulsory short answer questions, 2 from each module. Each question caries 3 marks. Part B contains 2 questions from each module of which student should answer any one. Each question can have maximum 2 sub-divisions and carry 6 marks

Course Level Assessment Questions

Course Outcome 1 (CO1):

- 1. Describe the importance of inter-personal skills in the workplace.
- 2. Analyse the challenges and opportunities for managers in using OB concepts.
- 3. "The workplace discriminations undermine organisational performance", Justify.

Course Outcome 2 (CO2):

- 1. Identify the major job attitude and job satisfaction parameters.
- 2. How to apply concepts about emotions and moods to specific OB issues.
- 3. Differentiate between person fit for job and person fit for organisation.

Course Outcome 3(CO3):

- 1. What is learning and what are the theories of learning?
- 2. How do individual differences and organisational constraints influence decision making?
- 3. Identify how employee involvement measures motivate employees.

Course Outcome 4 (CO4):

- 1. Differentiate group and team.
- 2. Relate the contemporary theories of leadership to earlier foundational theories.
- 3. What are three types of conflicts and the three loci of conflict?

Course Outcome 5 (CO5):

- 1. What are the functional and dysfunctional effects of organisational culture?
- 2. What are your suggestions to overcome resistance to change in an organization?
- 3. Identify the potential environmental, organisational and personal sources of stress at work.

| 2 | What is workforce diversity? How to manage diversity? | 3 |
|----|---|---|
| 3 | State and explain the foundations of individual behaviour. | 3 |
| 4 | Differentiate 'Classical conditioning' and 'Operant conditioning' behavioural theories. | 3 |
| 5 | Describe how an understanding of attitudes is useful for the study of organisational behaviour. | 3 |
| 6 | What is job design? Describe different approaches to job design. | 3 |
| 7 | What is a team? Can groups become team? Defend your answer. | 3 |
| 8 | What is the difference between transformational leadership, transactional leadership and charismatic leadership? | 3 |
| 9 | What is creativity? How creativity can be enhanced in organisations? | 3 |
| 10 | What is Organisational Development? Why is it undertaken by organisations? | 3 |
| | Answer any one question from each module. Each question carries 6 marks. Module I | |
| | | |
| 11 | State your views on the following statement: "People influence organizations and organizations influence people". | 6 |
| | OR | |
| 12 | Why have career management and talent management become important these days? Justify your points. | 6 |
| | Module II | |
| 13 | What is personality? What are its determinants? As per your opinion, which of them are more important in shaping personality. | 6 |
| 1 | OR | |
| 14 | From your own experience, provide three examples of perceptual errors. Discuss the outcomes of each instance. | 6 |

| | Module III | |
|----------|---|---|
| 15 | Compare and contrast Maslow's need hierarchy theory with Herzberg's two-factory of motivation. | 6 |
| | OR | |
| 16 | What is the relationship between stress and personality? What aspects of personality might tend to increase or decrease stress? | 6 |
| | Module IV | |
| 17 | Why groupthink is to be avoided? How might a manager attempt to ensure that groupthink does not occur in his / her group? | 6 |
| <u> </u> | OR | |
| 18 | What are the potential problems with upward and downward communications? How can managers alleviate these problems? | 6 |
| l | Module V | |
| 19 | What are the obstacles to change organisational culture? How can change be brought about? | 6 |
| | OR | |
| 20 | What are the forces leading to change in organisations? Using Lewin's theory justify why the change is resisted. | 6 |
| L | **** | |

Syllabus

Module 1

Nature of Organisational Behaviour: What are Organisations? – Why do Organisations Exist? – Nature of Organisational Behaviour – Foundations of OB – Contemporary OB – Scope of Organisational Behaviour – Contextual Perspectives of OB – Evolution of OB – OB Model

Management and Managers: Functions of Management – Manager's Roles – Types of Managers – Evolution of Management Theory – Contemporary Trends in Management Thinking

Challenges in OB: Managing Inclusivity / Diversity – Career Management – Talent Management – Globalisation

Module 2

Foundations of Individual Behaviour: Personal Factors – Environmental Factors – Organisational Systems and Resources – Models of Individual Behaviour

Intelligence: Nature of Intelligence – Types of Intelligence – Model, Theories, Measurement of Intelligence – Factors Influencing Intelligence

Personality: Nature of Personality – The Shaping of Personality – Determinants of Personality – Personality Structure – OB Related Personality Traits

Perception and Attribution: Perception: Meaning and Definition – Factors Influencing Perception – Perceptual Process – Perception and OB

Learning: Explicit and Tacit Knowledge – How Learning Occurs? – Principles of Learning – Learning and OB

Module 3

Attitudes and Values: Nature of Attitudes – Components of Attitudes – Formation of Attitudes – Functions of Attitudes – Changing Attitudes – Work-related Attitudes – Values

Motivation: Nature of Motivation – Importance of Motivation – Motivational Challenges – Theories on Motivation

Applied Motivational Practices: Rewards – Job Design – Behaviour Modification – Empowerment –Problem Employees – Quality of Work Life – Employee Engagement

Work Stress: Work Stress Model – Burnout – Stress Management – Stress and Performance

Module 4

Group Dynamics: Nature of Groups – Types of Groups – Group Development – Usefulness & Pitfalls of Groups – Determinants of Group Behaviour – Group Structuring – Group Decision Making

Team Dynamics: Teams vs. Groups – Benefits from Teams – Types of Teams – Implementing Teams in Organisations – Team Properties – Effective Teamwork

Workplace Behaviour: Nature of Conflict – Changing Views of Conflict – Functional and Dysfunctional Conflict – The Process of Conflict – Levels of Conflict – Conflict Resolution – Conflict Management Styles - Managerial Implications – Negotiation and Conflict Resolution

Leadership: Nature of Leadership – Leadership and Management – Importance of Leadership – Formal and Informal Leadership – Leadership Styles and Their Implications – Theories of Leadership – Contemporary Issues on Leadership – Leadership Development

Communication: Interpersonal Communication – Organisational Communication – Communication Networks – Communication Roles – Informal Communication – Communication Media – Information Technologies – Managerial Implications

Module 5

Organisations: Nature of Organisations – Organisational Structure – Key Factors of Organisational Structure – Types of Organisational Structures – Organisations for Future – Informal Organisations – Managerial Implications

Organisational Culture: Cultural Dimensions – How is Culture Created? – Sustaining Culture – Effects of Culture – Changing Organisational Culture – Creativity in Organisations – Innovation in Organisations

Organisational Change and Development: Nature of Change – Levels of Change – Types of Change – Forces for Change in Organisations – Resistance to Change – Force Field Theory of Change - The Change Process – Organisational Development – Managerial Implications

| 20MCA166 | FUNCTIONAL PROGRAMMING | CATEGORY | L | T | P | CREDIT |
|----------|------------------------|----------|---|---|---|--------|
| | | ELECTIVE | 3 | 1 | 0 | 4 |

Preamble: This course introduces a functional programming approach in problem solving. Salient features of functional programming like recursion, pattern matching, higher order functions are discussed.

Lists and their features, new types such as Recursive types, Enumerated types, Composite and Abstract types along with their applications are being discussed with high importance.

Haskell is introduced to give a practical flavour to the course.

Prerequisite: Discrete mathematics.

Course Outcomes: After the completion of the course the student will be able to

| CO 1 | Understand the principles of functional programming (Module 1) |
|------|--|
| CO 2 | Write purely functional programs, using recursion, pattern matching, and higher- order functions ((Module 2) |
| CO 3 | Design immutable data structures like lists. (Module 3) |
| CO 4 | Understand generic types for functional programs (Module 4) |
| CO 5 | Write programs using Haskell (Module 5) |

Continuous Internal Evaluation Pattern:

Attendance : 8 marks

Continuous Assessment Test (2 numbers) : 20 marks

Assignment/Quiz/Course project : 12 marks

End Semester Examination Pattern: There will be two parts; Part A and Part B. Part A contains 10 compulsory short answer questions, 2 from each module. Each question carries 3 marks. Part B contains 2 questions from each module of which student should answer any one. Each question can have maximum 2 sub-divisions and carry 6 marks.

Course Level Assessment Questions

Course Outcome 1 (CO1):

- 1. Design a recursive function to add two numbers.
- 2. Design a tail recursive function to find the nth Fibonacci number.
- 3. Explain the basic differences between imperative style programming and functional style programming.

2014

4. Analyse each of the following lambda expressions to clarify its structure. If the expression is a function, identify the bound variable and the body expression, and then analyse the body expression. If the expression is an application, identify the function and argument expressions, and then analyse the function and argument expressions:

ii)
$$\lambda x.\lambda y.\lambda z.((z x) (z y))$$

iii)
$$(\lambda f.\lambda g.(\lambda h.(g h) f) \lambda p.\lambda q.p)$$

v)
$$(\lambda p.(\lambda q.p \lambda x.(x p)) \lambda i.\lambda j.(j i))$$

Course Outcome 2 (CO2)

- 1. Explain with the help of examples the various forms of function definitions.
- 2. Explain functional composition with the help of examples.
- 3. Deduce the type of the following expression:

(.)
$$f g x = f (g x)$$
 where . -> Functional Composition.

Course Outcome 3(CO3):

1. Predict the output of the following along with detailed explanation on how did you arrive at the answer:

A.
$$[(a,b) | a \leftarrow [1..8]$$
; even a; b $\leftarrow [a + 3..4]$; odd b]

C.
$$['*'|i<-[1..3];j<-[1,2]]$$

2. Explain any three list operations along with function definitions and examples.

Note: Questions can be asked to solve problems using list comprehensions, to prove properties on list operations and functions on natural numbers using Mathematical Induction.

Course Outcome 4 (CO4):

- 1. Define Natural numbers as a Recursive Type and explain how this definition enumerates all Natural numbers.
- 2. Find the equivalent decimal representation of this value:

Succ (Succ (Succ (Succ (Succ Zero)))))

3. Define Fibonacci numbers using Pattern matching. Natural numbers should be represented as a Recursive type.

Note: Questions can be asked to prove properties on Binary Trees and Binary Search Trees using Structural Induction (Variant of Mathematical Induction.

Course Outcome 5 (CO5):

1. Duplicate only even numbers among the elements of a list using a Haskell function and explain. You need to do this in two ways; 1. Recursion 2. List Comprehension

Example: λ > dupli [1, 2, 3] ANS: [2,2]

Model question Paper

Duration: 3 Hours PART A Total: 60 Marks

- 1. Design a recursive function to add two numbers.
- 2. Can Arrays be used as a data structure in functional programming? Explain with reasons.
- 3. Explain functional composition with the help of an example.
- 4. Deduce the type of the following expression:

(.) f g x = f (g x) where . -> Functional Composition.

- 5. Predict the output of the following along with detailed explanation on how did you arrive at the answer:
 - a. $[(a,b) | a \leftarrow [1 ... 8]$; even a; b $\leftarrow [a + 3... 4]$; odd b]
 - b. ["Party" | k < -[1 .. 5]]
 - c. $['*'|i \leftarrow [1..3]; j \leftarrow [1,2]]$
- 6. Define the function "take". For example, take does the following:

Prelude> take 2 [1,2,3,4] [1,2].

7. Find the equivalent decimal representation of this value:

Succ (Succ (Succ (Succ (Succ Zero)))))

- 8. Explain composite types with the help of an example.
- 9. Define a Haskell function to find the factorial of a given number.
- 10. Define a Haskell function to reverse the elements of a list.

 $(3 \times 10 = 30 \text{ Marks})$

PART B

11. Explain commonly used data types in functional programming along with their properties.

OR

12. Write Recursive definitions along with an explanation for the below Arithmetic operations. Illustrate the recursive flow with the help of a diagram.

1. add x y 2. mult x y 3. div x y

- 13. Explain the following along with suitable examples:
 - 1. Currying in Functional Programming. 2. Strict and Non strict functions.

OR

- 14. Explain the following along with suitable examples:
 - 1. Guards and Pattern matching.2. Inverse functions.
- 15. Given below the definition of a function funcky

funcky:: Int ->Int

Estd

funcky n

|n| = 0 = 0

|otherwise = 1 + funcky(n-1)|

Predict the output of f for all $n \ge 0$? Prove your answer.

OR

16. Explain any three list operations along with function definitions and examples.

17. Explain Recursive Data Types with the help of an example.

OR

18. Give the type definition of a binary tree along with explanation of two functions on binary trees.

19. Duplicate only even numbers among the elements of a list using a Haskell function and explain. You need to do this in two ways; 1. Recursion 2. List Comprehension

Example: λ > dupli [1, 2, 3] ANS: [2,2]

OR

20. Define a queue data type in Haskell along with any two operations on it as well as examples.

 $(6 \times 5 = 30 \text{ Marks})$

SYLLABUS

Module I:

Review of recursion -Tail recursion -recursive program design- Functional Programming: Introduction, λ calculus, λ expressions, Identity function, Self application function, Function application function, Notation for naming functions and application reduction, Functions from functions, Argument selection and argument pairing functions, Free and bound variables, Name clashes and α conversion, Simplification through eta reduction, Conditions, Booleans and Integers, Recursion and Arithmetic, Expressions and values, Basic Data Types, Names and values in programming- Data structures in functional languages - Names and values in imperative and functional languages- Execution order in imperative and functional languages- Repetition in imperative and functional languages- Functions as values.

(Note: Recursion is a very important technique in functional programming, hence high importance needs to be given to make students understand the essentials of recursive thinking and program design, Basic Lambda (λ) calculus needs to be taught.)

Module II:

Functions: Functions and definitions, Functional composition, Operators, Inverse functions, Strict and non-strict functions, Type Inference.

(Note: Basic ways of defining functions, how to infer the types of variables and function needs to be taught)

Module III:

Lists: List notation, List comprehensions, Operations on lists, Map and filter, List patterns, Recursion and Induction: Over natural numbers, Over lists. Operations on lists

(Note: Mathematical Induction based Proofs needs to be taught from the reference text book.)

Module IV:

New Types: Enumerated types, Composite types, Recursive types, Abstract types, Trees: Binary trees, Binary search trees

(Note: Various definitions of properties of these new types, their property proofs etc needs to be taught)

Module V:

Programming with Haskell: Introduction to Haskell, Defining functions: guards, pattern matching and recursion, Lists, strings and tuples, Types and polymorphism, Higher order functions on lists: map, filter, list comprehension, User defined data types:lists, queues, trees

(Note: Students need to be taught how to program using Haskell in this module)

| 20MCA168 | VIRTUALISATION CONTAINERS | AND | CATEGORY | L | T | P | CREDIT |
|----------|------------------------------|-----|----------|---|---|---|--------|
| | | | ELECTIVE | 3 | 1 | 0 | 4 |

Preamble:

A graduate course in Computer Applications should give due exposure to the recent developments. Since virtualization and containers are the technologies that drive the majority of the day to day applications and industry, this course is designed to build upon the knowledge acquired at the undergraduate/graduate level on Operating Systems and familiarise students with virtualization and container technologies.

Prerequisite: Operating Systems

Course Outcomes: After the completion of the course the student will be able to

| CO 1 | Understand the basics of virtualization technology, architecture, limitations and |
|-------------|--|
| | applications. |
| CO 2 | Apply Networking Principles to setup virtual machines and connect to the network |
| CO 3 | Understand the basics of VM life cycle, VM migrations, VM scheduling and load |
| | balancing |
| CO 4 | Understand Container fundamentals including how to configure and set up a container |
| CO 5 | Understand the basics of security, troubleshooting and monitoring aspects in container |
| | technology |
| CO 6 | Apply the knowledge in Virtualization and docker to setup VM and dockers. |

| 100 | 40 | 60 | 3 hours |

Continuous Internal Evaluation Pattern:

Attendance : 8 marks
Continuous Assessment Test (2 numbers) : 20 marks
Assignment/Quiz/Course project : 12 marks

End Semester Examination Pattern: There will be two parts; Part A and Part B. Part A contains 10 compulsory short answer questions, 2 from each module. Each question carries 3 marks. Part B contains 2 questions from each module of which student should answer any one. Each question can have maximum 2 sub-divisions and carry 6 marks.

Course Level Assessment Questions

Course Outcome 1 (CO1):

- (a) Explain the need and applications of virtualization.
- (b) Describe the hypervisor architecture.
- (c) Mention tools and technologies used in virtualization.

Course Outcome 2 (CO2)

- (a) Describe IP addressing
- (b) Explain the concept of paging and virtual memory

Course Outcome 3(CO3):

- (a) Describe the VM life cycle.
- (b) Explain VM provisioning, VM scheduling and load balancing
- (c) Write in detail the KVM architecture and commands

Course Outcome 4 (CO4):

- (a) Discuss the container fundamentals and different container technologies.
- (b) Explain the container orchestration and clustering.

Course Outcome 5 (CO5):

- (a) Discuss the concepts of security and isolution in containers.
- (b) Explain troubleshooting, monitoring and alerting in containers.

Course Outcome 6 (CO6):

- (a) Explain how to configure and set up virtual machines.
- (b) Describe the configuring and setting up of containers.

Model Question paper

| | 1 | | |

| Max | . Marks: 60 | | Duration: 3 Hours |

| | Answer all questions, each carries 3 marks. | Marks |
|----------|--|-------|
| 1 | Explain the different types of hypervisors. | (3) |
| 2 | What are the types of virtualization ? | (3) |
| 3 | Explain the difference between private IP and Public IP. | (3) |
| 4 | What is virtual memory. | (3) |
| 5 | Explain any three commands in KVM and their uses. | (3) |
| 6 | What do you mean by virtual machine migration? | (3) |
| 7 | Write a short note on the container creation process. | (3) |
| 8 | Explain virtual networking in containers. | (3) |
| 9 | How are the running containers controlled | (3) |
| 10 | Explain troubleshooting in container technologies. | (3) |
| | PART B | |
| | Answer any one question from each module. Each question carries 6 marks. | |
| | Module I | |
| 11 | Briefly explain the hypervisor architecture. | (6) |
| <u> </u> | OR | 1 |
| 12 | Explain difference between virtualization and virtual computing. | (6) |
| L | Module II | |
| 13 | Briefly explain the different modes in networking can be set up in virtual machines. | (6) |
| | OR | |
| 14 | Explain how paging is important in the context of virtualization. | (6) |

| | Module III | |
|----|---|-----|
| 15 | Briefly explain the VM life cycle. | (6) |
| | OR | |
| 16 | Describe any VM scheduling algorithm. | (6) |
| | Module IV | |
| 17 | Explain the Breadth First Search algorithm with a suitable example. | (6) |
| | L L OR | |
| 18 | Compare virtual machines and containers | (6) |
| 1 | Module V | 1 |
| 19 | Explain the importance of security and isolation in Docker. | (6) |
| | OR | • |
| 20 | Explain the business context of containers | (6) |

Syllabus

Module 1 (10 Hours): Physical and virtual machines, Traditional and virtual computing, Understanding virtualization, Need and Applications of virtualization, Limitations, Simulations and Emulations, Challenges in Virtualized environment, tools and technologies in virtualized environments. Types of Hypervisors, Hypervisor architecture

Module 2 (8 Hours): IP addressing - Private address, Public address, virtual LAN, Memory addressing, Paging, Memory mapping, virtual memory, complexities and solutions of memory virtualization

Module 3 (14 Hours): VM lifecycle, Process and system level VMs, VM configurations, VM migrations, Migration types and process, VM provisioning, Scaling, VM scheduling, Load balancing: Significance, Types and Algorithms. Case study: KVM, KVM architecture, KVM commands

Module 4 (10 Hours): Container fundamentals, Containers versus virtual machines, Different container technologies, Configuring a container engine, Container virtual networking, Container orchestration and clustering, Images and containers. Case study: Docker

Module 5 (6 Hours): Working with remote repositories, Security and isolation, Troubleshooting, Monitoring and alerting, Controlling running containers, Containers in a business context

| 20MCA172 | ADVANCED OPERATING | CATEGORY | L | T | P | CREDIT |
|----------|--------------------|----------|---|---|---|--------|
| | SYSTEMS | ELECTIVE | 3 | 1 | 0 | 4 |

Preamble: This course intends to provide insight into more Advanced Operating Systems. Detailed discussion on various concepts like process synchronization, mutual exclusion, resource sharing, concurrency control and security are discussed at algorithm level. Various kinds of advanced operating systems like Distributed Systems, Multiprocessor systems, and Database Systems are included to the level possible within the scope of a single course. More detailed treatment can be done through seminars, assignments and talks by eminent external experts.

Prerequisite: Basic concepts of desktop computer operating systems.

Course Outcomes: After the completion of the course the student will be able to

| CO 1 | Identify synchronization problems in operating systems and issues in distributed | | | | | |
|------|--|--|--|--|--|--|
| | systems. | | | | | |
| CO 2 | Explain classification of mutual exclusion algorithms and security violations. | | | | | |
| CO 3 | Explain the design of distributed shared memory and issues in load distribution. | | | | | |
| CO 4 | Explain design issues and synchronization in multiprocessor systems. | | | | | |
| CO 5 | Explain synchronization and concurrency control in database systems. | | | | | |

Part B contains 2 questions from each module of which student should answer any one. Each question can have maximum 2 sub-divisions and carry 6 marks

Course Level Assessment Questions

Course Outcome 1 (CO1):

- 1. Explain synchronization using semaphore.
- 2. Classify Advanced operating systems.
- 3. Illustrate limitation of Lamports clocks.

Course Outcome 2 (CO2)

- 1. Explain some of the algorithms for mutual exclusion.
- 2. Explain potential security violations.
- 3. Compare the Lamport's algorithm and Rickart-Agarwala algorithm.

Course Outcome 3(CO3):

- 1. Explain major design issues and building mechanisms in Distributed file systems.
- 2. Explain important algorithms for implementing DSM.
- 3. Explain issues in load distribution.

Course Outcome 4 (CO4):

- 1. Explain system architecture of Multiprocessor systems.
- 2. Explain design issues in Database Multiprocessor Systems.
- 3. Explain how virtualization is implemented.

Course Outcome 5 (CO5):

- 1. Explain Lock based algorithms for concurrency control in Database Systems.
- 2. Illustrate Timestamp based algorithms for concurrency control in Database Systems.
- 3. Explain design issues in Database Systems.

Model Question paper

Part A

- 1. Categorize various advanced operating systems.
- 2. Illustrate synchronization using semaphore.
- 3. Explain potential security violations.
- 4. Explain requirements of mutual exclusion.
- 5. What is the difference between load balancing and load sharing?
- 6. Which are the major components of a load distributing algorithm?
- 7. Explain the interconnection network in multiprocessors?
- 8. Explain the structure of Multiprocessor of Operating Systems.
- 9. Explain what is meant by serializability.
- 10. What is meant by Log equivalence?

 $(3 \times 10 = 30 \text{ Marks})$

Part B

Module 1

11. Identify any six issues that are common with Distributed systems. [6 Marks]

OR

12. Write a note on the following

a. mutex [3 marks]

b. semaphore [3 marks]

Module 2

13. Write short notes on

a. Rickart-Agarwala Algorithm [3 Marks]

b. Lamport's algorithm. [3 Marks]

OR

14. Explain any six Design Principles for Secure Systems. [6 Marks]

Module 3

15. Identify major design issues in Distributed File systems.

[6 Marks]

OR

16. Write any two algorithms for implementing DSM

[6 Marks]

Module 4

17. Explain Multiprocessor System Architectures and Interconnection Networks.

[6 Marks]

OR

18. Discuss the synchronization of processes in Multiprocessors.

[6 Marks]

Module 5

19. Explain the basic Synchronization Primitives for Concurrency Control in Database systems.

[6 Marks]

OR

20. Write and explain an optimistic algorithm for concurrency control in database systems.

[6 Marks]

| | MANAGEMENT | ELECTIVE | 3 | 1 | 0 | 4 |

Preamble: The primary aim of this course is to understand basic principles of management and accounting. In our day to day life managers will have to manage so many resources in the present day complex business environment. By effective and efficient management the goals of the organisation can be attained. This course is intended to give an idea regarding managing the resources for the effective performance of the organisation and decision making in everyday life. Basic idea regarding book keeping and accounting is also required for managers for taking decisions.

Prerequisite: NIL

Course Outcomes: After the completion of the course the student will be able to

| CO 1 | Understand management as a process. |
|-------------|---|
| CO 2 | Critically analyse and evaluate management theories and practices |
| CO 3 | Perform planning and organising for an organisation |
| CO 4 | Do staffing and related human resource development function |
| CO 5 | Take proper decisions to get competitive advantage |
| CO 6 | Understand basic concepts in book keeping and accounting. |

Course Outcomes: After the completion of the course the student will be able to

Continuous Assessment Test (2 numbers) : 20 marks
Assignment/Quiz/Course project : 12 marks

End Semester Examination Pattern: There will be two parts; Part A and Part B. Part A contain 10 questions with 2 questions from each module, having 3 marks for each question. Students should answer all questions. Part B contains 2 questions from each module of which student should answer any one. Each question can have maximum 2 sub-divisions and carry 6 marks.

Course Level Assessment Sample Questions

Course Outcome CO1:

Describe various functions of management.

Course Outcome CO2:

Explain different theories of management thought.

Course Outcome CO3:

Illustrate different steps in planning.

Course Outcome CO4:

Describe different types of training methods for employees in an organisation.

Course Outcome CO5:

Explain the decision process in an organisation with case example.

Course Outcome CO6:

Explain the procedure of preparation of balance sheet with a simple example.

Syllabus

Module I

Introduction to Management: Basic Managerial Concepts, Levels of management, Managerial Skills, Managerial role. Management functions-Planning, Organising, Staffing, leading and Controlling.

Early Contributions in Management: Management thought - Classical approach, scientific management, contributions of Taylor, Gilbreths, Fayol's 14 principles of management.

Human relation approach - contribution of Elton Mayo Systems approach - organization as an open system and Contingency approach

Module II

Planning: Nature and importance of planning, types of plans - Steps in planning, Levels of planning - The Planning Process - MBO definition and process, SWOT Analysis, importance.

Organising: Nature of organizing,-span of control in management, factors affecting span of control- Authority and responsibility.

Organisation structure - Formal and informal, Types of organization structure line, line and staff, functional, divisional, project, matrix, virtual form of organisations.

Module III

Staffing and related HRD Functions: meaning, nature, staffing process, Job analysis and manpower planning, job description and job specification, Recruitment & selection, selection process, Tests and interviews. Training and development - concept and methods ,Performance appraisal- concept and methods.

Module IV

Managerial Decision Making and controlling: Decision making –types of decisions, decision making process, Decision Making Tools, Importance of controlling, Techniques of controlling-Break Even Analysis, Budgetary Control - Benchmarking –importance and limitations of benchmarking, Six Sigma importance, limitations and process of six sigma, Total Quality Management-Introduction to marketing management-Marketing mix- product life cycle

Module V

Book- Keeping and Accountancy -Elements of Double Entry -Book- Keeping - rules for journalizing -Ledger accounts -Cash book- - Trial Balance- Method of Balancing accounts- the journal proper (simple problems). Final accounts: Preparation of trading and profit and loss Account- Balance sheet (with simple problems) - Introduction to Accounting packages (Description only)

| 20MCA184 | EMBEDDED SYSTEMS | CATEGORY | L | T | P | CREDIT |
|----------|------------------|----------|---|---|---|--------|
| | | ELECTIVE | 3 | 1 | 0 | 4 |

Preamble: This course introduces students to the basic concepts behind Embedded Systems. It helps the students to understand the various techniques involved in embedded system design and development.

Prerequisite:

- 20MCA103 Digital Fundamentals & Computer Architecture.
- 20MCA107 Advanced Software Engineering.
- Basic knowledge of the subjects Operating Systems and System Software.

Course Outcomes: After the completion of the course the student will be able to

| CO 1 | Understand the basic concepts of Embedded Systems and its Applications. |
|------|---|
| CO 2 | Demonstrate the role of individual components involved in a typical embedded system. |
| CO 3 | Learn about the co-design approach for embedded hardware and firmware development. |
| CO 4 | Understand the concepts involved in Embedded System Design and development Process. |
| CO 5 | Learn about techniques used in the Integration and Testing of Embedded Hardware and Firmware. |
| CO 6 | Understand the basic concepts of RTOS based Embedded System Design. |

| Total Marks | CIE | ESE | ESE Duration |
|-------------|-----|-----|--------------|
| 100 | 40 | 60 | 3 hours |

Continuous Internal Evaluation Pattern:

Attendance : 8 marks
Continuous Assessment Test (2 numbers) : 20 marks
Assignment/Quiz/Course project : 12 marks

End Semester Examination Pattern: There will be two parts; Part A and Part B. Part A contains 10 compulsory short answer questions, 2 from each module. Each question caries 3 marks. Part B contains 2 questions from each module of which student should answer any one. Each question can have maximum 2 sub-divisions and carry 6 marks.

2014

Course Level Assessment Questions

Course Outcome 1 (CO1):

- 1. Define Embedded System.
- 2. Illustrate the major Applications of Embedded System.
- 3. List out the classifications of Embedded System.

Course Outcome 2 (CO2):

- 1. Illustrate the components of an embedded System with the help of relevant diagram.
- 2. Explain about the processor Embedded into a System.

Course Outcome 3 (CO3):

- 1. Describe the Fundamental Issues in Hardware Software Co-Design.
- 2. Explain UML with the help of an example.

Course Outcome 4 (CO4):

- 1. Describe any three Digital Electronic Components used in the embedded Hardware development.
- 2. Explain about Embedded Firmware Design Approaches.

Course Outcome 5 (CO5):

- 1. Explain any one technique used for the Integration of Hardware and Firmware.
- 2. List out the techniques used for the Testing of Embedded Systems.

Course Outcome 6(CO6):

- 1. Define RTOS.
- **2.** Describe How you will Choose an RTOS.

Syllabus

Module 1

Introduction to Embedded Systems: Embedded system, Embedded system Vs General Computing System, Processor Embedded into a System, Embedded Hardware units and devices in a system, Embedded Software in a System, Introduction to embedded system design, Classification of Embedded systems, Skills Required for an embedded system Designer, Examples of the Embedded Systems. Major Application Areas of Embedded Systems, Purpose of Embedded Systems.

Module 2

Embedded System Design and development Process: Embedded System-On-Chip (SoC) and Use of VLSI Circuit Design Technology, Build Process for embedded systems, Design Process in Embedded System, Design Challenges in Embedded System Design, Hardware-Software Co-Design in an Embedded System, Formalism of System Design.

Module 3

Hardware Software Co-Design and Program Modelling: – Fundamental Issues in Hardware Software Co-Design, Computational Models in Embedded Design - Data Flow Graph Model, Control Data Flow Graph, State Machine Model, Sequential Program Model, Concurrent / Communicating Process Model, Object oriented model, UML.

Module 4

Design and Development of Embedded Product:

Embedded Hardware Design and Development: - Analog Electronic Components, Digital Electronic Components, VLSI and Integrated Circuit Design.

Embedded Firmware Design and Development: - Embedded Firmware Design Approaches, Embedded Firmware Development Languages.

Module 5

Integration and Testing of Embedded Hardware and Firmware: - Integration of Hardware and Firmware, Testing Embedded Systems.

RTOS based Embedded System Design: - Basic operating system services, Introduction to Real Time Operating System(RTOS), RTOS Task-Scheduling models, How to Choose an RTOS.

| 20MCA186 | COMPUTER GRAPHICS | CATEGORY | L | T | P | CREDIT |
|----------|-------------------|----------|---|---|---|--------|
| | | ELECTIVE | 3 | 1 | 0 | 4 |

Preamble: This subject intends to provide an overview of the foundations of Computer Graphics rendering. Special emphasis is laid on modern concepts like Ray Tracing that have already become industry standards for graphics rendering with modern GPUs. Other fundamentals such as colorimetry and radiometry are also introduced in the subject. Although the course is expected to be treated theoretically for evaluation purposes, practical sessions and talks by external experts from the graphics processing industry may be desirable.

Prerequisite:

Fundamentals of computer hardware, Linear Algebra

Course Outcomes: After the completion of the course the student will be able to

| CO 1 | Apply foundational knowledge in computer graphics to work with Graphics APIs | | | | | |
|-------------|---|--|--|--|--|--|
| CO 2 | Explain various shape drawing algorithms and transformations. | | | | | |
| CO 3 | Explain viewing concepts and follow the workflow in computer graphics pipeline. | | | | | |
| CO 4 | Explain different shading, texture mapping and data structures used in computer | | | | | |
| | graphics. | | | | | |
| CO 5 | Apply concepts in Raytracing to better understand and design computer graphics | | | | | |
| | models. | | | | | |
| CO 6 | Apply concepts in colorimetry and radiometry to work with images. | | | | | |

2014

Course Level Assessment Questions

Course Outcome 1 (CO1):

- 4. Explain the workflow in the computer graphics pipeline.
- 5. How does alpha composition affect image appearance?
- 6. Explain Eigen vectors and Eigen values?

Course Outcome 2 (CO2)

- 4. Explain some of the pitfalls of Bresenham line drawing algorithm.
- 5. Explain Affine transformation and its purpose.
- 6. Compare the mid-point and Bresenham circle drawing algorithms.

Course Outcome 3(CO3):

- 4. Explain how anti-aliasing affects the image quality.
- 5. Explain projective transformation.
- 6. Explain Field of View.

Course Outcome 4 (CO4):

- 4. Explain some of the benefits of using Triangle meshes.
- 5. How is Phong shading different from Artistic Shading?
- 6. How is texture mapping for rasterized image performed.

Course Outcome 5 (CO5):

- 4. Explain what makes Ray Tracing a highly system intensive rendering process.
- 5. How can transparency be achieved using ray tracing.
- 6. Explain the techniques used in Ray Tracing for shadows.

Course Outcome 6 (CO6):

- 1. Explain Tonal Reproduction.
- 2. Write a short note on particle tracing for Lambertian scenes.
- 3. How can rough and smooth surfaces be modeled?

Model Question paper

Part A

- 21. Explain the concept and idea behind pixels.
- 22. Write three major applications of computer graphics.
- 23. Explain the term antialiasing?
- 24. Demonstrate how the DDA Line drawing algorithm works with a simple example of your own.
- 25. What is the purpose of tiling multidimensional arrays.
- 26. Explain the meaning and purpose of graphics APIs?
- 27. Explain the concept of ray tracing?
- 28. Explain the basic concept behind ray-object intersection and how it is established.
- 29. Explain what is meant by color space and give examples.
- 30. What is meant by a High Dynamic Range image?

[3x10 = 30 Marks]

Part B

Module 1

31. Explain the process of converting an analog image to a digital image. [6 Marks] OR 32. Write a note on the following a. RGB Color Space [3 marks] b. Matrix Diagonalisation [3 marks] 33. Write short notes on c. Projective Transformation [3 Marks] d. Perspective Projection [3 Marks] OR 34. Explain a typical Graphics Pipeline. [6 Marks] Module 3 35. Compare the various graphics APIs citing their advantages and disadvantages. OR [6 Marks] 36. Explain the various specialized data structures used in computer graphics [6 Marks] Module 4 37. Explain how shading and shadowing are achieved using Ray Tracing. OR [6 Marks] 38. Explain the geometry for graphics hardware. [6 Marks] Module 5 39. Explain the methods for Nighttone mapping. [6 Marks] OR 40. Explain how accurate direct lighting can be achieved. [6 Marks]

Syllabus

| Module | Contents | Hours |
|--------|--|-------|
| I | Introduction to computer graphics: Major Areas and Major Applications, Preliminary discussion on Graphics Pipeline, Numerical Issues, Efficiency and Coding Graphics Programs. Raster Images: Raster Devices, Images, Pixels, RGB Color and Alpha Composition. Fundamentals of Signal Processing for Images and Sampling Theory(Theoretical understanding only). Mathematical Foundations of Computer Graphics: Review of Trigonometry and Geometry, Theoretical foundations of Linear Algebra – Vectors and Matrices, Eigen Values and Eigen Vectors, Matrix | 9 |
| | Diagonalization(Theoretical understanding only). | |
| II | Fundamentals of shape drawing: Line drawing - DDA and Bresenham Algorithms, Circle drawing: Mid Point and Bresenham. Transformations(2D, 3D):, Translation and Affine Transformations, | |
| | Inverse of Transformation Matrices, Coordinate transformations. Viewing: Viewing Transformations, Projective Transformation, Perspective Projection, Field of View Graphics Pipeline: Rasterization, Operations, Antialiasing, Culling primitives for efficiency. | 11 |
| III | Surface shading: Diffuse Shading, Phong Shading, Artistic Shading. Texture Mapping: 2D and 3D Mapping, Texture Mapping for Rasterized Triangles, Bump Textures, Displacement Mapping, Shadow Maps. Data Structures for Graphics: Triangle Meshes, Scene Graphs, Spatial Data Structures, BSP Tree for visibility, Tiling Multidimensional Arrays. Graphics APIs: Intuitive understanding of role of Graphics APIs such as OpenGL, Direct3D(DirectX), Vulkan etc. – No programming required | 10 |
| IV | Ray Tracing: Basic Ray Tracing Algorithms, Perspective, Computing Viewing Rays, Ray-Object Intersection, Shading, Shadows, Ideal Specular Reflection, Ray Tracing Program, Transparency and Refraction, Instancing, Constructive Solid Geometry, Distribution Ray Tracing. Using Graphics Hardware: Introduction, Geometry for Hardware, Processing Geometry using Pixels. | 8 |

| Module | Contents | Hours |
|--------|--|-------------|
| V | Light: Radiometry, Transport Equation, Photometry; Colors: Colorimetry, Color Spaces, Chromatic Adaption, Color Appearance; Tonal Reproduction: Classification, Dynamic Range, Image Formation, Frequency based Operators, Gradient Domain Operators, Gradient Domain Operators, Spatial Operators, Division, Sigmoids, Night Tonemapping. Global Illumination: Particle tracing for Lambertian scenes, Path Tracing, Accurate Direct Lighting. Reflection Models: Real World Materials, Implementing Reflection | Hours 11 |
| | Models, Specular Reflection models, Smooth layered Model, Rough Layered Model. | |

| 20MCA188 | ARTIFICIAL | CATEGORY | L | T | P | CREDIT |
|----------|--------------|-----------------|---|---|---|--------|
| | INTELLIGENCE | ELECTIVE | 3 | 1 | 0 | 4 |

Preamble: This course introduces the techniques of Artificial Intelligence and analyzes various methods of solving problems using it. The concept of expert system architecture & fuzzy operations are introduced. This course serves as a prerequisite for many advanced courses in Data Science areas.

Prerequisite: Mathematical Foundations for Computing, Advanced Data structures **Course Outcomes:** After the completion of the course the student will be able to

| CO 1 | Apply the steps needed to provide a formal specification for solving the problem. |
|------|---|
| CO 2 | Apply and analyze the different types of control and heuristic search methods to solve problems |
| CO 3 | Understand various Game theory problems& Knowledge structures |
| CO 4 | Formulate knowledge representation and examine resolution in predicate and propositional logic |
| CO 5 | Apply feasible planning and learning techniques to solve non-trial problems |
| CO 6 | Analyze expert systems & fuzzy operations to solve real life problems. |

| Total Marks | CIE | ESE | ESE Duration |
|-------------|-----|-----|--------------|
| 100 | 40 | 60 | 3 hours |

Continuous Internal Evaluation Pattern:

Attendance : 8 marks
Continuous Assessment Test (2 numbers) : 20 marks
Assignment/Quiz/Course project : 12 marks

End Semester Examination Pattern: There will be two parts; Part A and Part B. Part A contains 10 compulsory short answer questions, 2 from each module. Each question caries 3 marks. Part B contains 2 questions from each module of which student should answer any one. Each question can have maximum 2 sub-divisions and carry 6 marks

2014

Course Level Assessment Questions

Course Outcome 1 (CO1):

- 1. Describe the areas of Artificial intelligence. (K1)
- 2. List the problem formulations & production characteristics. (K1 & K2)
- 3. Solve the various problems such as 8 puzzle, Crypt arithmeticetc(K3)

Course Outcome 2 (CO2):

- 1. Describe search strategies in solving problems. (K1 & K2)
- 2. List the disadvantages of hill climbing algorithm (K1& K2)
- 3. Illustrate A* algorithm for the graph (K3)

Course Outcome 3 (CO3):

- 1. Demonstrate two player Zero sum game (K3)
- 2. List and explain the knowledge representation methods in AI. (K1&K2)
- 3. Explain how alpha-beta algorithm works in pruning of branches with an example.(K3)

Course Outcome 4 (CO4):

- **1.** Translate the following sentence to predicate logic (K3)
 - a) 'All pompeians were Roman'
 - b)'All Romans were either loyal to Caesar or hated him'.
- 2. Explain the algorithm to convert WFF to clause.(K1 & K2)
- 3.Describe about resolution graph in predicate and propositional logic.(K1 & K2)

Course Outcome 5 (CO5):

- 1. Differentiate between Goal stack and Hierarchical planning in AI. (K1 & K2)
- 2. Discuss about neural net learning(K1 & K2)
- 3. List out the steps in genetic learning. (K1 & K2)

Course Outcome 6 (CO6):

- 1. Specify the components in expert system. (K1 & K2)
- 2. Solve various fuzzy operations (K3)
- 3. List out & explain various tools and languages in AI. (K1 & K2)

(6)

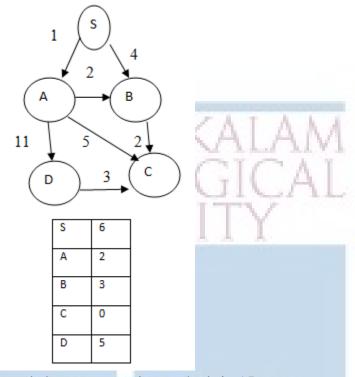

Model question paper

Part A

| 1. | List the applications areas in AI | |
|-----|--|---------|
| 2. | Solve the following cryptarithmetic problem | |
| | SEND + ABDUL KALAM | |
| | MONEY | |
| 3. | Explain iterative deepening search | |
| 4. | List the disadvantages of hill climbing | |
| 5. | Solve a simple two player Zero sum game | |
| 6. | Explain about conceptual dependency | |
| 7. | Explain inference rules in FOPL | |
| 8. | List components of a planning system | |
| 9. | Give a short note on role of an expert system | |
| 10. | . List various fuzzy operations | |
| | (10X3=30 r) | narks) |
| | | |
| | Part B | |
| | | |
| 11. | . Consider a water jug problem . You are given two jugs, a 4 gallon and 3 gallons. | Neither |
| | has any measuring markers on it. There is a pump that can be used to fill the ju | gs with |
| | water. How can you get exactly 2 gallons of water into 4-gallon jug. State the pro | duction |
| | rule for waterjug problem | |
| | | (6) |
| | OR | |
| | Estd. | |
| 12. | . Solve missionaries and cannibals problem | (6) |
| | | |
| | | |
| 13. | . Explain blind search strategies in detail | (6) |
| | 2014 | |

OR
14. Explain A* Algorithm for the given graph

15. List and explain the knowledge representation methods in AI.

(6)

OR

- 16. Explain how alpha-beta algorithm works in pruning of branches with an example. (6)
- 17. Explain the algorithm to convert WFF to clause with an example. (6)

OR

- 18. Explain Neural net and Genetic learning methods in AI (6)
- 19. Illustrate architecture of an expert system and mention its features. (6)

OR

Heuristic Value:

20. Solve the following using various Fuzzy set operations $A = \{0.1/1, 0.3/2, 0.45/3\}$ (6)

 $B = \{0.15/1, 0.34/2\}$

(5X6=30 Marks)

SYLLABUS

Module 1

Introduction to AI and Production Systems:- AI-Problem formulation, Problem Definition - Production systems, Problem characteristics, Production system characteristics, Example AI Problems (8 Puzzle problem, Missionary Cannibals Problem, Crypt arithmetic Problems, block world Problem)

Module 2

Search Strategies : - Blind search strategies -Depth First Search, Breadth First Search, Best First Search, Iterative Deepening Search, Heuristic Search strategies- Admissible Heuristics and examples - Simple Hill Climbing and Steepest Ascending Hill Climbing, Simulated Annealing , A* algorithm.

Module 3

Game playing : Two Player Zero Sum Games, Modelling Two Player Zero Sum Games as search problems, Min-Max Algorithm, Optimizing Min Max Algorithm using $\alpha - \beta$ cut off, *Knowledge Representation Structures :* Frames, Sematic Networks and Conceptual Dependencies.

Module 4

Knowledge representation using Logic : - First Order Predicate Logic (FOPL), Well Formed Formula(WFF) in FOPL, Inference rules for FOPL, The Clause Form and conversion of WFFs to Clause Form, Resolution- Refutation *.Planning :-* Overview, components of a planning system, Goal stack planning, Hierarchical planning, *Learning :-*Forms of learning, neural net learning & genetic learning

Module 5

Expert systems:—Architecture of expert systems, Roles of expertsystems, Languages and tools — Typical expert system examples. *Fuzzy Logic:* - Fuzzy Variables ,Fuzzy Sets and Fuzzy Set Operations, Typical Examples using FuzzySets.

| 20MCA192 | IPR AND CYBER LAWS | CATEGORY | L | T | P | CREDIT |
|----------|--------------------|----------|---|---|---|--------|
| | | ELECTIVE | 3 | 1 | 0 | 4 |

Preamble: This course intends to provide insight into Intellectual Property Rights and Cyber Laws. It includes detailed discussion on various intellectual property rights, procedures to apply for copyrights &patents, legalities of intellectual property to avoid plagiarism and other IPR related crimes. Effectiveness of cyber-laws and other countermeasures against cybercrime and cyber warfare are discussed in detail. Various kinds of Intellectual Property issues in cyberspace and the growth and development of the law in this regard are included to the level possible within the scope of a single course. More detailed treatment can be done through seminars, assignments and talks by eminent external experts including industry.

Prerequisite: General awareness on internet essentials, web technologies, e-commerce.

Course Outcomes: After the completion of the course the student will be able to

| CO 1 | Explain the fundamentals of IPR and patents. |
|------|---|
| CO 2 | Apply intellectual property related tools such as trademark and copyright to real |
| | problems. |
| CO 3 | Discuss Industrial designs, trade secret and geographic Indications. |
| CO 4 | Describe laws governing cyberspace and analyze the role of Internet Governance in |
| | framing policies for Internet security. |
| CO 5 | Discuss different types of cybercrimes and penalties under IT Act. |

Assignment/Quiz/Course project : 12 marks

End Semester Examination Pattern: There will be two parts; Part A and Part B. Part A contains 10 compulsory short answer questions, 2 from each module. Each question carries 3 marks. Part B contains 2 questions from each module of which student should answer any one. Each question can have maximum 2 sub-divisions and carry 6 marks

Course Level Assessment Questions

Course Outcome 1 (CO1):

- 4. Discuss the need for protection of intellectual property.
- 5. Explain TRIPS Agreement.
- 6. Illustrate types of patent applications.

Course Outcome 2 (CO2)

- 4. Explain Trademark Infringement and Protection of trademarks.
- 5. Explain the rights conferred by copyright, registration and ownerships of copyrights.

2014

6. Discuss about software copyright.

Course Outcome 3(CO3):

- 4. Discuss the need for protection of design and explain Design Act, 2000.
- 5. Explain basic concepts of Geographic Indications such as filing, granting and Protection of geographic indications.
- 6. Describe the procedure of discovering and protecting of trade secret.

Course Outcome 4 (CO4):

- 4. Explain the need for cyber laws.
- 5. Discuss protection of copyright on cyberspace.
- 6. Explain ISP in cyberspace.

Course Outcome 5 (CO5):

- 4. Explain different amendments on IT Act 2000.
- 5. Discuss Terrorism on cyberspace.
- 6. Explain offences of misrepresentation.

Model Question paper

Part A

- 21. Categorize various patent applications.
- 22. Explain the criteria for categorizing an invention as patentable or non-patentable.
- 23. What are the requirements for filing trademarks?
- 24. Explain copyright and the rights conferred by copyrights.
- 25. Explain the term geographical indications by giving suitable examples.
- 26. What is meant by design under the Design Act,2000?
- 27. Describe the risks associated with cyber space.
- 28. What is meant by the term cyber laws.
- 29. Explain cyber stalking and phishing.
- 30. Define the term hacking and explain its essentials.

 $[3 \times 10 = 30 \text{ Marks}]$

Part B

Module 1

31. Describe the procedure for registration of patents.

OR

[6 Marks]

- 32. Write short notes on
 - c. Intellectual property and the need for its protection.

[3 marks]

d. Importance and features of WIPO.

[3 marks]

Module 2

33. Explain the methods for transferring copyrights.

[6 Marks]

OR.

34. Describe software copyright and how can software be classified according to copyrights.

[6 Marks]

Module 3

35. What is industrial design? Describe the salient features of Design act, 2000. [6 Marks]

OR

36. How are the trade secrets dealt with under the Indian law? Discuss.

[6 Marks]

Module 4

37. Explain the essential requirements of cyber squatting.

[6 Marks]

OR

38. Discuss about cyber space and the protection of copyrights on cyberspace.

[6 Marks]

Module 5

39. Explain the objectives and features of Information Technology Act 2000.

[6 Marks]

OR

40. What do you mean by cyber crimes? Discuss the nature and types of cyber crimes.

[6 Marks]

| 20MCA132 | OBJECT ORIENTED | CATEGORY | L | T | P | CREDIT |
|----------|-----------------|-----------|---|---|---|--------|
| | PROGRAMMING LAB | PRACTICAL | 0 | 1 | 3 | 2 |

Preamble: This course enables the students to understand the concepts of object-oriented

programming and to develop skills using these paradigms using Java.

Prerequisite: Knowledge of any programming language preferred.

Course Outcomes: After the completion of the course the student will be able to

| CO 1 | Understand object-oriented concepts and design classes and objects to solve problems |
|------|--|
| CO 2 | Implement arrays and strings. |
| CO 3 | Implement object-oriented concepts like inheritance, overloading and interfaces |
| CO 4 | Implement packages, exception handling, multithreading and generic programming. Use java.util package and Collection framework |
| CO 5 | Develop applications to handle events using applets |
| CO 6 | Develop applications using files and networking concepts |

Course Level Assessment Questions

Course Outcome 1 (CO1):

1. Define a class 'product' with data members pcode, pname and price. Create 3 objects of the class and find the product having the lowest price.

2014

2. Read 2 matrices from the console and perform matrix addition.

- 3. Add complex numbers
- 4. Read a matrix from the console and check whether it is symmetric or not.
- 5. Create CPU with attribute price. Create inner class Processor (no. of cores, manufacturer) and static nested class RAM (memory, manufacturer). Create an object of CPU and print information of Processor and RAM.

Course Outcome 2 (CO2)

- 1. Program to Sort strings
- 2. Search an element in an array.
- 3. Perform string manipulations
- 4. Program to create a class for Employee having attributes eNo, eName eSalary. Read n employ information and Search for an employee given eNo, using the concept of Array of Objects.

Course Outcome 3(CO3):

- 1. Area of different shapes using overloaded functions
- 2. Create a class 'Employee' with data members Empid, Name, Salary, Address and constructors to initialize the data members. Create another class 'Teacher' that inherit the properties of class employee and contain its own data members department, Subjects taught and constructors to initialize these data members and also include display function to display all the data members. Use array of objects to display details of N teachers.
- 3. Create a class 'Person' with data members Name, Gender, Address, Age and a constructor to initialize the data members and another class 'Employee' that inherits the properties of class Person and also contains its own data members like Empid, Company_name, Qualification, Salary and its own constructor. Create another class 'Teacher' that inherits the properties of class Employee and contains its own data members like Subject, Department, Teacherid and also contain constructors and methods to display the data members. Use array of objects to display details of N teachers.
- 4. Write a program has class Publisher, Book, Literature and Fiction. Read the information and print the details of books from either the category, using inheritance.
- Create classes Student and Sports. Create another class Result inherited from Student and Sports. Display the academic and sports score of a student.

- 6. Create an interface having prototypes of functions area() and perimeter(). Create two classes Circle and Rectangle which implements the above interface. Create a menu driven program to find area and perimeter of objects.
- 7. Prepare bill with the given format using calculate method from interface.

 Order No.

| Date: | AF. | ADL | /U.L. | KALAIVI | |
|------------|------|----------|------------|---------|--|
| Product Id | Name | Quantity | unit price | Total | |
| 101 | Α | 11211 | 25 | 50 | |
| 102 | В | OT'AT A | 100 | 100 | |
| | | | | | |

Course Outcome 4 (CO4):

1. Create a Graphics package that has classes and interfaces for figures Rectangle, Triangle, Square and Circle. Test the package by finding the area of these figures.

150

- 2. Create an Arithmetic package that has classes and interfaces for the 4 basic arithmetic operations. Test the package by implementing all operations on two given numbers
- 3. Write a user defined exception class to authenticate the user name and password.

Net. Amount

- 4. Find the average of N positive integers, raising a user defined exception for each negative input.
- 5. Define 2 classes; one for generating multiplication table of 5 and other for displaying first N prime numbers. Implement using threads. (Thread class)
- 6. Define 2 classes; one for generating Fibonacci numbers and other for displaying even numbers in a given range. Implement using threads. (Runnable Interface)
- 7. Producer/Consumer using ITC
- 8. Program to create a generic stack and do the Push and Pop operations.
- 9. Using generic method perform Bubble sort.
- 10. Maintain a list of Strings using ArrayList from collection framework, perform built-in operations.
- 11. Program to remove all the elements from a linked list
- 12. Program to remove an object from the Stack when the position is passed as parameter
- 13. Program to demonstrate the creation of queue object using the PriorityQueue class
- 14. Program to demonstrate the addition and deletion of elements in deque
- 15. Program to demonstrate the creation of Set object using the LinkedHashset class
- 16. Write a Java program to compare two hash set

- 17. Program to demonstrate the working of Map interface by adding, changing and removing elements.
- 18. Program to Convert HashMap to TreeMap

Course Outcome 5 (CO5):

- 1. Program to draw Circle, Rectangle, Line in Applet.
- 2. Program to find maximum of three numbers using AWT.
- 3. Find the percentage of marks obtained by a student in 5 subjects. Display a happy face if he secures above 50% or a sad face if otherwise.
- 4. Using 2D graphics commands in an Applet, construct a house. On mouse click event, change the color of the door from blue to red.
- 5. Implement a simple calculator using AWT components.
- 6. Develop a program that has a Choice component which contains the names of shapes such as rectangle, triangle, square and circle. Draw the corresponding shapes for given parameters as per user's choice.
- 7. Develop a program to handle all mouse events and window events
- 8. Develop a program to handle Key events.

Course Outcome 6 (CO6):

- 1. Program to list the sub directories and files in a given directory and also search for a file
- 2. Write a program to write to a file, then read from the file and display the contents on the console.
- 3. Write a program to copy one file to another.
- 4. Write a program that reads from a file having integers. Copy even numbers and odd numbers to separate files.
- 5. Client server communication using Socket TCP/IP
- 6. Client Server communication using DatagramSocket UDP

2014

Syllabus:

Classes and Objects, Constructors, Method Overloading, Access Modifiers, Arrays and Strings, Inheritance, Interfaces, Abstract classes, Dynamic Method Dispatch, String, Packages, Introduction to java.util, Collection framework, User defined packages, Exceptions, Multithreading, Applets, Graphics, File, Generic programming, Socket Programming

Course Contents and Lab Schedule

| Topic | No. of |
|---|--------|
| | hours |
| Classes and Objects. | 3 |
| 2. Constructors, Method Overloading, Access Modifiers | 2 |
| 3. Arrays and Strings. | 4 |
| 4. Inner class – static and non-static | 2 |
| 5. Inheritance, Multiple inheritance - implementation using interfaces | 3 |
| 6. Method overriding, Abstract classes, Dynamic Method Dispatch | 3 |
| 7. Interfaces and Packages, StringBuffer class | 3 |
| 8. Introduction to java.util package – Vector, Scanner, StringTokenizer | 2 |
| 9. Collection framework – ArrayList, LinkedList, Stack, Queue, Set, Map | 3 |
| 10. User defined packages | 2 |
| 11. Exceptions – User defines exceptions | 2 |
| 12. Multithreading – Thread class | 2 |
| 13. Inter Thread Communication | 2 |
| 14. Generic programming | 2 |
| 15. Applets, Graphics – 2D | 3 |
| 16. Event handling in Applet | 3 |
| 17. File | 3 |
| 18. Socket Programming | 3 |

| | ADVANCED DBMS | CATEGORY | L | T | P | CREDIT |
|----------|---------------|-----------|---|---|---|--------|
| 20MCA134 | LAB | PRACTICAL | 0 | 1 | 3 | 2 |

Preamble: This course is to provide understanding on relational and non-relational database systems and its design. The course covers SQL, PL/SQL and NoSQL programs which are essential for the development and deployment of web based applications. Also this course serves as a prerequisite for many advanced courses in Data Science areas.

Prerequisite: Database Management Systems

Course Outcomes: After the completion of the course the student will be able to

| CO 1 | Design and build a simple relational database system and demonstrate competence with the fundamentals tasks involved with modelling, designing and implementing a database. |
|------|---|
| CO 2 | Apply PL/SQL for processing databases. |
| CO 3 | Comparison between relational and non-relational (NoSQL) databases and the configuration of NoSQL Databases. |
| CO 4 | Apply CRUD operations and retrieve data in a NoSQL environment. |
| CO 5 | Understand the basic storage architecture of distributed file systems. |
| CO 6 | Design and deployment of NoSQL databases with real time requirements. |

| Maximum Marks: 50 | | | | | | |
|-------------------|--|-----|--|--|--|--|
| Attendance | The state of the s | 15% | | | | |
| Maintenance | Maintenance of daily lab record and GitHub management 20% | | | | | |
| Regular clas | s viva | 15% | | | | |
| Timely com | pletion of day to day tasks | 20% | | | | |
| Tests/Evalua | ition | 30% | | | | |

End Semester Examination Pattern:

| 1 | Maximum Marks: 50 | y | |
|------------------------------|---|-----|----------|
| Verification of Daily | program record and Git Repository | | 5 marks |
| Viva | | 7 | 10 marks |
| Problem solving (Based on | Flowchart / Algorithm / Structured description of problem to explain how the problem can be solved / Interface Design | 15% | |
| difficulty level, one | Program correctness | 50% | 35 marks |
| or more questions | Code efficiency | 15% | |
| may be given) | Formatted output and Pushing to remote Git repository | 20% | |
| Total Marks | | | 50 marks |

Course Level Assessment

Questions Course Outcome 1 (CO1):

- 1. Creation of a database using DDL commands including integrity constraints. (K6)
- 2. Create an application to apply Data Manipulation Language (DML) commands to modify the database. (K6)
- 3. Apply DCL and TCL commands to impose restrictions on databases. (K3)
- 4. Create an application to retrieve data from databases using select, views. (K6)
- 5. Create an application to use joins for query optimization. (K6)

Course Outcome 2 (CO2):

1. Construct PL/SQL code for sample databases. (K6)

Course Outcome 3(CO3):

- 1. Compare relational and non-relational databases. (K5)
- 2. Understand the installation and configuration of NoSQL Databases. (K2)

Course Outcome 4 (CO4):

1. Build sample collections/documents to perform query operations. (K6)

Course Outcome 5 (CO5):

1. Build sample collections/documents to perform the shell commands like replica set, indexing etc. (K6)

Course Outcome 6 (CO6):

- 1. Develop sample applications using any of the front end tools and NoSQL. (K6)
- 2. Usage of concerned Online/Cloud Storage Management Systems like MongoDB Atlas, Cassandra DataStax etc. (K6)
- Deployment of NoSQL in Cloud: Google Bigtable/ Amazon DynamoDB/ Azure Cosmos DB. (K6)

Syllabus

- 1. An overview of relational database design using MySQL/ MariaDB/ PostgreSQL etc. (Apply the following basic queries on an Employee/ Student database etc.)
 - a. DDL Commands
 - b. DML Commands
 - c. Imposing restrictions on database (DCL & TCL Commands)
 - d. Accessing database (SELECT, Filtering using WHERE, HAVING, GROUP BY, ORDER BY Clauses, Subquery and View)
 - e. Optimizing databases (Join, Aggregate & Set operations, Other operators like arithmetic, logical, special etc.)
- 2. PL/SQL Programs (Trigger, Cursor, Stored Procedures and Functions)
- 3. Introduction to NoSQL Databases.
 - a. Installation and configuration of any one of the NoSQL databases MongoDB/ Cassandra/ HBase/ CouchDB/ Amazon DynamoDB/ Redis/
 Neo4j etc.
- 4. Designing Databases using NoSQL
- 5. Query Processing
 - a. Performing CRUD operations
 - b. Retrieving Data from a NoSQL database
 - c. Usage of aggregate functions, regular expressions etc.
- 6. NoSQL Administration
 - a. Security, Monitoring & Backup
 - b. Create Users and Roles
- 7. NoSQL shell commands
 - Perform Sharding, Replication (Master-Slave/ Master-Less/ Peer-to-Peer Architectures), Clustering, Partitioning, Indexing (Corresponding to the selected NoSQL Database)

8. Deployment

- a. Local Deployment
 - i. NoSQL and Front-End: PHP/Java/Python (MongoDB/ Cassandra etc.)
- b. Cloud Deployment
 - i. NoSQL and Cloud: Amazon DynamoDB/ Google Bigtable/ AzureCosmos DB
 - ii. Familiarization of Atlas/ DataStax corresponding to the selected NoSOL Database
- 9. *Micro project:* Students can be given a group micro project, so that they learn to work in a team environment.

| 3.1 | Installation and configuration of any one of the NoSQL databases - MongoDB/ Cassandra/ HBase/ CouchDB/ Amazon DynamoDB/ Redis/ Neo4j etc. | 2 |
| 4 | Designing Databases using NoSQL | 2 hrs |
| 5 | Query Processing | 8 hrs |
| 5.1 | Performing CRUD operations Retrieving Data from a NoSQL database Usage of aggregate functions, regular expressions etc. | 8 |
| 6 | NoSQL Administration | 2 hrs |
| 6.1 | Security, Monitoring & Backup Create Users and Roles | 2 |
| 7 | NoSQL shell commands | 6 hrs |
| 7.1 | Perform Sharding, Replication (Master-Slave/ Master-Less/ Peer-to-Peer Architectures), Clustering, Partitioning, Indexing (Corresponding to the selected NoSQL Database) | |
| 8 | Deployment E5111 | 16 hrs |
| 8.1 | Local Deployment NoSQL and Front-End: PHP/Java/Python (MongoDB/ Cassandra etc.) | 4 |
| 8.2 | Cloud Deployment NoSQL and Cloud: Amazon DynamoDB/ Google Bigtable/ Azure Cosmos DB | 8 |
| 8.3 | Familiarization of Atlas/ DataStax corresponding to the selected NoSQL Database | 4 |
| 9 | Micro project | 10 hrs |

| 20MCA136 | NETWORKING | CATEGORY | L | T | P | CREDIT |
|-----------|-----------------------------|-----------|---|---|---|--------|
| 20N1CA130 | & SYSTEM ADMINISTRATION LAB | PRACTICAL | 0 | 1 | 3 | 2 |

Preamble: This laboratory course is intended to provide the background knowledge required for a software professional in the fields of networking and system administration. Students will acquire necessary knowledge to deploy and administer systems.

Prerequisite: Basic understanding of computer programming, Internet and operating systems

Course Outcomes: After the completion of the course the student will be able to

| CO 1 | Install and configure common operating systems. |
|------|---|
| CO 2 | Perform system administration tasks. |
| CO 3 | Install and manage servers for web applications. |
| CO 4 | Write shell scripts required for system administration. |
| CO 5 | Acquire skill sets required for a DevOps. |

Mapping of course outcomes with program outcomes

Course Level Assessment Questions

Course Outcome 1 (CO1):

1. Install latest version of Ubuntu on a virtual box, set up a static ip address to it and install drupal environment.

2014

2. You are given a computer with very low hardware resources. It is to be used as a kiosk. Identify and install a suitable Linux distribution. You can simulate it in a virtual environment.

Course Outcome 2 (CO2)

- 1. You are given a system which is connected to internet. However, users logging on to the system are unable to access internet from their browser. Trouble shoot the issue, clearly documenting the steps you have taken (Possible issues to look for are browser configuration, network connectivity, routing, ip address configuration, DNS resolution)
- 2. You are given a system which boots to a non graphical environment. You are also given a shell script which is designed for a specific task. Your task is to make sure that the script runs every time the system boots up. Write/modify necessary scripts for this.
- 3. You are required to add 100 users to a Linux system. Details of the users to be added were collected from a web form to a csv file. The csv may contain errors such as wrong case or missing fields. Write a script to add users using the data provided in the csv file with proper error checking.

Course Outcome 3(CO3):

- 1. You are given a bare bone installation of latest version Ubuntu. Assume that the system is accessible from internet. Your task is to successfully install word press (or any other web application) on this server. Clearly indicate the steps taken and software installed for this task.
- 2. Assume that you have an installation of old version Ubuntu. However, it does not have the latest version of virtual box (or some other application). The new version is available as a binary on a website. Upgrade to this version.

Course Outcome 4 (CO4):

- 1.Look at the system log files. Write a shell script to extract the last login details of a particular user and list out all failed logins. Store the results to a file. The user name should be given as a command line argument.
- 2. Write a shell script to display the details of a particular process currently running. Assume that you have necessary permissions. The process name/id is to be given as a command line argument

Course Outcome 5 (CO5):

- 1.Capture network traffic on your system. Using wireshark find out all http and https traffic to a specific host.
- 2. Write an Ansible playbook to deploy a new Linux VM on a remote server.

Syllabus:

Introduction to Computer hardware. Study of various peripherals. Study of common operating systems. File system organization in common operating systems.

Study of command line environment in common operating systems. Study of command line tools for system administration.

Shell scripting: bash shell, shell scripts for system management.

Study of startup scripts.

Study of server software for common applications such as http, ftp, dns, dhcp.

Practical study of Ipv4 and Ipv6 networking protocols. Setting up firewalls.

Virtual machines and containers. Configuration and deployment.

List of Lab Experiments/Exercises

To gain proficiency in command line tools and operations, it is highly recommended to use a terminal window instead of GUI tools. This will later help the student with latest approaches in maintaining cloud based infrastructure. virtualbox/quemu. may be used for this.

- 1. Introduction to Computer hardware: Physical identification of major components of a computer system such as mother board, RAM modules, daughter cards, bus slots, SMPS, internal storage devices,i nterfacing ports. Specifications of desktop and server class computers. Installation of common operating systems for desktop and server use. (Students may be asked to formulate specification for computer to be used as Desktop, Web server)
- 2. Study of a terminal based text editor such as Vim or Emacs. (By the end of the course, students are expected to acquire following skills in using the editor: cursor operations, manipulate text, search for patterns, global search and replace)

Basic Linux commands, familiarity with following commands/operations expected

- 1. man
- 2. ls. echo, read
- 3. more, less, cat,
- 4. cd, mkdir, pwd, find
- 5. mv, cp, rm, tar
- 6. wc, cut, paste
- 7. head, tail, grep, expr
- 8 chmod, chown
- 9. Redirections & Piping
- 10. useradd, usermod, userdel, passwd
- 11. df,top, ps
- 12 ssh, scp, ssh-keygen, ssh-copy-id
- 3. File system hierarchy in a common Linux distribution, file and device permissions, study of system configuration files in /etc, familiarizing log files for system events, user activity, network events.
- 4. Shell scripting: study bash syntax, environment variables, variables, control constructs such as if, for and while, aliases and functions, accessing command line arguments passed to shell

- scripts. Study of startup scripts, login and logout scripts, familiarity with systemd and system 5 init scripts is expected.
- 5. Installation and configuration of LAMP stack. Deploy an open source application such as phpmyadmin and Wordpress.
- 6. Installation and configuration of common software frame works such as Laravel. (Student should acquire the capability to install and configure a modern framework)
- 7. Build and install software from source code, familiarity with make and cmake utilities expected.
- 8. Introduction to command line tools for networking IPv4 networking, network commands: ping route traceroute, nslookup, ip. Setting up static and dynamic IP addresses. Concept of Subnets, CIDR address schemes, Subnet masks, iptables, setting up a firewall for LAN, Application layer (L7) proxies.
- 9. Analyzing network packet stream using tcpdump and wireshark. Perform basic network service tests using nc.
- 10. Introduction to Hypervisors and VMs, Xen or KVM, Introduction to Containers: Docker, installation and deployment.
- 11. Automation using Ansible: Spin up a new Linux VM using Ansible playbook
